SAMPLE COLLECTION LOGS FOR THE OLD LANDFILL (LF01)

SAMPLE COLLECTION LOG

DATE: 8-21-93 SAMPLE ID: BTR-LF01-S01
 RADAR STATION: Barter WEATHER: Sunny, breezy, 40°F
 SITE/AOC: Old Landfill, LF01 FEET FROM FIXED POINT: _____ MAGNETIC HEADING: _____
 FIXED POINT: Head of stream draining base of bermed retaining wall.
 SAMPLE MATRIX: ☒ Soil (S) ☐ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)
 SAMPLERS: PG, JM
 TIME SAMPLED: 10:00 (8/21), 10:40 (8/20) DEPTH OF SAMPLE (feet): 0-6"
 SAMPLE DESCRIPTION/COMMENTS: At depth because upper sediments are constantly being reworked by wave action, well sorted sands, minor intermixed gravels, moist texture.
 SAMPLING METHOD: Dedicated scoop and hand auger
 QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☒ QA/QC Extra Volumes
☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____
☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

WATER PARAMETERS							
TIME	PH	CONDUCTIVITY		TEMPERATURE	SPECIFIC GRAVITY		TURBIDITY

				TSS		250 ml	---
				TOC	✓	500 ml	4 oz
				TCLP		2 liters	2 x 8 oz

Preservation: HVOC and VOC: HCl to pH <2; metals: HNO₃ to pH <2; Ice all samples to 4°C **DTIC QUALITY INSPECTED 3**
 Sample ID Format: Radar Station - site identifier - matrix + sample number - depth (feet)
 (i.e., BUL-ST05-SW07, BTR-EB04, WRT-SS08-S09-5.0)
 Radar Station Codes: Bullen=BUL; Oliktok=OLI; Barter=BTR; Lonely=LON; Barrow=BRW; Wainwright=WRT; Lay=LAY; Lisburne=LIS

SAMPLE COLLECTION LOG

DATE: 8-20-93 SAMPLE ID: BTR-LF01-SD01

RADAR STATION: Barter WEATHER: Sunny, 40°F

SITE/AOC: Old Landfill, LF01 FEET FROM FIXED POINT: 0 MAGNETIC HEADING: South/southwest

FIXED POINT: Discharge of culvert at southeast corner of LF01, at road intersection between LF01 and sewage lagoon.

SAMPLE MATRIX: ☐ Soil (S) ☒ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)

SAMPLERS: PG, JM

TIME SAMPLED: 10:40 DEPTH OF SAMPLE (feet):

SAMPLE DESCRIPTION/COMMENTS: Upgradient sample for LF01, but also downgradient sample for sewage lagoon. Careful for potential pathogens.

SAMPLING METHOD: Spade and scoop

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes

☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID

WATER PARAMETERS							
TIME	PH	CONDUCTIVITY		TEMPERATURE	SPECIFIC GRAVITY		TURBIDITY
10:30	7.6	1,660		4°C			NR
10:40	7.5	1,640		4°C			

MONITORING READINGS

SAMPLE COLLECTION LOG

DATE: 8-20-93 SAMPLE ID: BTR-LF01-SD02
 RADAR STATION: Barter WEATHER: Sunny, clear, slight wind
 SITE/AOC: Old Landfill, LF01 FEET FROM FIXED POINT: _____ MAGNETIC HEADING: _____
 FIXED POINT: Small pond with sludge from old landfill - may include biological waste.
 SAMPLE MATRIX: ☐ Soil (S) ☒ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)
 SAMPLERS: PG, DP
 TIME SAMPLED: 11:00 DEPTH OF SAMPLE (feet): 0 to 0.5
 SAMPLE DESCRIPTION/COMMENTS: May include biological/human waste. Crushed drum/bbl in small liquid filled depression. Material appears to be from LF01. Sands and silts, minor gravels, high feed content.
 SAMPLING METHOD: Dedicated dipper/scoop
 QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes
☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____
☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

SAMPLE COLLECTION LOG

DATE: 8-20-93 SAMPLE ID: BTR-LF01-SW04

RADAR STATION: Barter WEATHER: Sunny, cool, 40°F

SITE/AOC: Old Landfill, LF01 FEET FROM FIXED POINT: _____ MAGNETIC HEADING: _____

FIXED POINT: Small pond north of sewage lagoon, north of Southeast end of LF01, east of culvert sampled by SD01.

SAMPLE MATRIX: ☐ Soil (S) ☐ Sediment (SD) ☒ Surface Water (SW) ☐ Groundwater (GW)

SAMPLERS: DP, PG

TIME SAMPLED: 14:45 DEPTH OF SAMPLE (feet): _____

SAMPLE DESCRIPTION/COMMENTS: This pond provides head to drive leachate into LF01 and constitutes an upgradient sample.

SAMPLING METHOD: Dedicated beaker

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☒ QA/QC Extra Volumes

☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

SAMPLE DESCRIPTION/COMMENTS: Recollect due to technical difficulties at lab. Dark green and opaque. Collected from ponded area adjacent to road.

SAMPLING METHOD: Scoop

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☒ QA/QC Extra Volumes MS/MSD

☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID

SAMPLE COLLECTION LOGS FOR THE POL CATCHMENT (LF03)

SAMPLE COLLECTION LOG

DATE: 8/20/93 SAMPLE ID: BTR-LF03-S01

RADAR STATION: Barter WEATHER: Sunny, clear, breezy, cool. 30°F

SITE/AOC: POL Catchment, LF03 FEET FROM FIXED POINT: 90 MAGNETIC HEADING: 50°

FIXED POINT: The east corner of the southern support of the exposed pipeline.

SAMPLE MATRIX: ☒ Soil (S) ☐ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)

SAMPLERS: RO, ML

TIME SAMPLED: 10:20 DEPTH OF SAMPLE (feet): Surface 0-6"

SAMPLE DESCRIPTION/COMMENTS: 50% cobbles, 50% gravel, sample mostly gravel/Stain at base of berm along drainage ditch of POL tank 18, HC odor (leaking under berm). Note steel in area may affect magnetic readings.

SAMPLING METHOD: Disposable scoop

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes

☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

SAMPLE COLLECTION LOG

DATE: 8/18/93 SAMPLE ID: BTR-LF03-SD08
 RADAR STATION: Barter WEATHER: Sunny, clear, mild, calm, 40°F
 SITE/AOC: POL Catchment Basin, LF03 FEET FROM FIXED POINT: 26 MAGNETIC HEADING: 180°
 FIXED POINT: South of intersection of north-south Berm Road and the north side east-west Berm Road.
 SAMPLE MATRIX: ☐ Soil (S) ☒ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)
 SAMPLERS: RO, PG
 TIME SAMPLED: 15:45 DEPTH OF SAMPLE (feet): 0-6" below surface along shore
 SAMPLE DESCRIPTION/COMMENTS: Edge of shoreline, silt and black clay organics, vegetation material.

SAMPLING METHOD: Spade and disposable scoop

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes
☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____
☐ Ambient Condition Blank (AB) ☒ Replicate of Soil Sample ID BTR-LF03-SD02

SAMPLE COLLECTION LOGS FOR THE CURRENT LANDFILL (LF04)

SAMPLE COLLECTION LOG

DATE: 8/21/93 SAMPLE ID: BTR-LF04-S01

RADAR STATION: Barter WEATHER: Sunny, warm, clear

SITE/AOC: Current Landfill, LF04 FEET FROM FIXED POINT: 10 MAGNETIC HEADING: Western tributary

FIXED POINT: Confluence of first tributary with drainage ditch west of LF01, south of ocean.

SAMPLE MATRIX: ☒ Soil (S) ☐ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)

SAMPLERS: PG, JM

TIME SAMPLED: 09:40 DEPTH OF SAMPLE (feet): 0-0.5

SAMPLE DESCRIPTION/COMMENTS: Well graded, well sorted fine sands. Moist, moderate organics. 10 feet upstream in west direction of tributary off main drainage.

SAMPLING METHOD: Dedicated scoop

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes

☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

SAMPLE COLLECTION LOG

DATE: 08/18/93 SAMPLE ID: BTR-SD08-S07-3

RADAR STATION: Barter WEATHER: Sunny, windy, clear, 45°F

SITE/AOC: Ditch Source, SD08 FEET FROM FIXED POINT: 10 MAGNETIC HEADING: Westerly

FIXED POINT: Warehouse (WH1) source pipe measured perpendicular to building wall.

SAMPLE MATRIX: ☒ Soil (S) ☐ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)

SAMPLERS: PG, JM

TIME SAMPLED: 11:30 DEPTH OF SAMPLE (feet): 3 feet below surface

SAMPLE DESCRIPTION/COMMENTS: Rounded to subrounded pebbles and gravel in a medium-coarse grained sand matrix, light brown, moist, compact. Upgradient sample for plume.

SAMPLING METHOD: Hand auger, scoop

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes

☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

SAMPLE COLLECTION LOGS FOR THE OLD RUNWAY DUMP (LF12)

SAMPLE COLLECTION LOG

DATE: 08/22/93 SAMPLE ID: BTR-LF12-S01
 RADAR STATION: Barter WEATHER: 40°F, foggy, calm to variable light winds
 SITE/AOC: Old Runway Dump, LF12 FEET FROM FIXED POINT: 20 MAGNETIC HEADING: East
 FIXED POINT: Sample location is from west shoreline boundary (see map).

SAMPLE MATRIX: ☒ Soil (S) ☐ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)

SAMPLERS: PG, TM

TIME SAMPLED: 15:30 DEPTH OF SAMPLE (feet): Surface grab sample

SAMPLE DESCRIPTION/COMMENTS: Sands and gravel fill material, pebble and gravel removed prior to sampling. Note: diesel operated vehicle generally downwind but winds were variable, vehicle kept on standby because a sow and 2 cubs were seen in the area this morning.

SAMPLING METHOD: Dedicated scoop

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes

☐ Trip Blank (TB)

☐ Duplicate of Water Sample ID _____

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

SAMPLE COLLECTION LOGS FOR THE HEATED STORAGE (SS13)

SAMPLE COLLECTION LOG

DATE: 08/18/93 SAMPLE ID: BTR-SS13-S01
 RADAR STATION: Barter WEATHER: Sunny, clear, 50°F
 SITE/AOC: Heated Storage, SS13 FEET FROM FIXED POINT: 1 MAGNETIC HEADING: East (true)
 FIXED POINT: East end of north culvert, due east of heated storage building (SS13) 1 foot from end of culvert.
 SAMPLE MATRIX: ☒ Soil (S) ☐ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)
 SAMPLERS: PG, RT
 TIME SAMPLED: 11:50 DEPTH OF SAMPLE (feet): Surface
 SAMPLE DESCRIPTION/COMMENTS: Silt, sand, and gravel fill, moist.

SAMPLING METHOD: Spade and scoop

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes
☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____
☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

SAMPLERS: PG, JM

TIME SAMPLED: 13:05 DEPTH OF SAMPLE (feet): Surface Water

SAMPLE DESCRIPTION/COMMENTS: Surface water sample collected from second tributary east of convergence with drainage ditch (SD08). Fine grained silts and gravels, petroleum sheen observed.

SAMPLING METHOD: _____

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes

☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

SAMPLE COLLECTION LOGS FOR THE BLADDER DIESEL SPILL (SS20)
(Formerly identified as AOC14)

SAMPLE COLLECTION LOG

DATE: 8/21/93 SAMPLE ID: BTR-SS20-S01-0.75

RADAR STATION: Barter WEATHER: Foggy, cool, breezy, misty 40's°F

SITE/AOC: Bladder Diesel Spill, SS20 FEET FROM FIXED POINT: 91 MAGNETIC HEADING: 225°

FIXED POINT: Southern most guard post for guylines from radar dome (see map).

SAMPLE MATRIX: ☒ Soil (S) ☐ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)

SAMPLERS: RT, RO

TIME SAMPLED: 19:15 DEPTH OF SAMPLE (feet): 6"-8" (Water at 1 foot - loss of hole integrity)

SAMPLE DESCRIPTION/COMMENTS: 40% cobble, 40% gravel, 20% sand. Sampled mostly gravel and sand.

SAMPLING METHOD: Shovel away surface rock sample with disposable scoop.

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes

☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

 TIME SAMPLED: 16:09 DEPTH OF SAMPLE (feet): Surface
 SAMPLE DESCRIPTION/COMMENTS: Northern edge of pond along bank, a lot of pond vegetation along shoreline, clear water, vegetation mat on bottom.
 SAMPLING METHOD: Subsurface. Dipped bottles below surface to collect water for water samples.
 QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes
☐ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____
☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

 Sample ID Format: Radar Station - site identifier - matrix + sample number - depth (feet)
 (i.e., BUL-ST05-SW07, BTR-EB04, WRT-SS08-S09-5.0)
 Radar Station Codes: Bullen=BUL; Oliktok=OLI; Barter=BTR; Lonely=LON; Barrow=BRW; Wainwright=WRT; Lay=LAY; Lisburne=LIS

SAMPLE COLLECTION LOG

DATE: 08/16/93 SAMPLE ID: BTR-TB01
 RADAR STATION: Barter WEATHER: _____
 SITE/AOC: Contaminated Ditch, SD08 FEET FROM FIXED POINT: _____ MAGNETIC HEADING: _____
 FIXED POINT: _____

SAMPLE MATRIX: ☐ Soil (S) ☐ Sediment (SD) ☐ Surface Water (SW) ☐ Groundwater (GW)

SAMPLERS: RT, JM, PG

TIME SAMPLED: 15:00 DEPTH OF SAMPLE (feet): _____

SAMPLE DESCRIPTION/COMMENTS: Trip blank collected for SD08 samples on 08/16/93

SAMPLING METHOD: Grab

QA/QC SAMPLES COLLECTED: ☐ Equipment Blank (EB) ☐ QA/QC Extra Volumes

☒ Trip Blank (TB) ☐ Duplicate of Water Sample ID _____

☐ Ambient Condition Blank (AB) ☐ Replicate of Soil Sample ID _____

WATER PARAMETERS							
TIME	PH	CONDUCTIVITY		TEMPERATURE	SPECIFIC GRAVITY	TURBIDITY	

MONITORING READINGS					
TIME	PID READING (ppm)	CG/LEL (%)	HANBY SCREENING (standard/ppm)		

BG=Background; BZ=Breathing Zone; BH=Borehole; NR=No Readings; HS=Headspace; S=Sample (uncontained)

✓ CHECK ANALYSES REQUESTED								
ANALYSES	✓	BARROW LAB		ANALYSES	✓	ANCHORAGE LAB		
		CONTAINERS				CONTAINERS		
		WATER	SOIL			WATER	SOIL

Client Name :ICF KAISER ENGINEERING
Ordered By :RAY MORRIS
Project Name :DEW LINE
Project# :BARTER
PWSID :UA

WORK Order :70003
Report Completed :10/04/93
Collected :08/21/93 @ 13:30 hrs.
Received :08/24/93 @ 12:00 hrs.
Technical Director:STEPHEN C. EDE
Released By : *C. Montecel*

Sample Remarks: SAMPLE COLLECTED BY: JERRY M., M. LEMMA, AND PETER E.M. J = INDICATES AN ANALYTE WHOSE CONCENTRATION IS ESTIMATED BECAUSE THE ANALYTE'S CONCENTRATION IS DETECTED BELOW THE CALIBRATION RANGE. B = THIS FLAG IS USED WHEN THE ANALYTE IS FOUND IN THE ASSOCIATED BLANK AS WELL AS IN THE SAMPLE.

Parameter	Results	QC Qual	Units	Method	Allowable Limits	Ext. Date	Anal Date	Init

Project Name :DEW LINE
Project# :BARTER
PWSID :UA

WORK Order :70013
Report Completed :09/30/93
Collected :08/21/93 @ 13:05 hrs
Received :08/24/93 @ 12:00 hrs
Technical Director:STEPHEN C. EDE
Released By : *(Signature)*

Sample Remarks: SAMPLE COLLECTED BY: M. LEMMA AND PETER M.G. 8270: SAMPLE HAS BEEN SPIKED. PENTACHLOROPHENOL IS OUTSIDE Q/C LIMITS DUE TO MATRIX INTERFERENCE. 8260: FOR MS/MSD RECOVERIES & RPD SEE Q/C SUMMARY. J = INDICATES AN ANALYTE WHOSE CONCENTRATION IS ESTIMATED BECAUSE THE ANALYTE'S CONCENTRATION IS DETECTED BELOW THE CALIBRATION RANGE.

Collected :08/21/93 @ 20:10 h
Received :08/24/93 @ 12:00 h
Technical Director:STEPHEN C. EDE
Released By : *C. H. Heston*

Sample Remarks: SAMPLE COLLECTED BY: PETER M.G., JERRY M., AND M.L. SEE QC/PACKAGE FOR SPIKE CONCENTRATIONS. FOR 8270 ANALYSIS BOTH SURROGATE AND SPIKE RECOVERIES FOR THIS SAMPLE WERE VERY LOW. SPIKE DUP WERE ACCEPTABLE. J = INDICATES AN ANALYTE WHOSE CONCENTRATION IS ESTIMATED BECAUSE THE ANALYTE'S CONCENTRATION IS DETECTED BELOW THE CALIBRATION RANGE.

Sample Remarks: SAMPLE COLLECTED BY: JERRY M., PETER M.G., ROBERT T., AND M. LEMMA.
FOR EPH 8100M RESULT INDICATES POSSIBLE BIOGENIC HYDROCARBON
CONTAMINATION SAMPLE IS A VERY WET MOSS WITH A % SOLID OF 16% ONLY.

Parameter	Results	QC Qual	Units	Method	Allowable Limits	Ext. Date	Anal Date	Init
Percent Solids	16.2		%	SM17 2540G			09/07	EAL
Hydrocarbons EPH	1150	D	mg/Kg	3510/3550/8100M		09/16	09/21	JBH
Hydrocarbons VPH	9.00	U	mg/Kg	EPA 5030/8015M		09/07	09/10	WLS
Volatile Organics								
Benzene	0.500	U	mg/Kg	EPA 8260		09/07	09/29	KWM

APPENDIX G
DATA VALIDATION SUMMARIES

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Water
DATE: April 15, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 4 water samples from the Barter Island site on August 21, 1993 (referenced chain of custody record No. 396). Requested analyses were for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 1, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF01-SW04	1348	Water
BTR-LF01-SW03	1362	Water
BTR-LF01-SW02	1368	Water
BTR-LF01-SW01	1372	Water

The laboratory did not submit the raw data for sample BTR-LF01-SW01, even though results for this sample were found on the summary result page.

It should be noted that all quantitation limits reported by the laboratory (200 ppb) for the water samples were lower than those specified in the Project Sampling and Analysis Plan (500 ppb). The correct practical quantitation limit (PQL) when employing the lowest usable calibration point (50 ppm) should be 2500 ppb.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document " National Functional

Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a 6 point initial calibration on GC instrument ICF5 on 8/28/93. The attempted range of the initial calibration was from 10 ppm to 10,000 ppm. Due to low sensitivity and interference, the 10 ppm calibration standard was deleted from the calibration. A percent relative standard deviation (%RSD) of 41.6% was calculated using calibration factors determined from the initial 5 point calibration. The RSD of 41.6% exceeds the recommended QC criteria of 20.0%, primarily due to the interference in the 50 ppm calibration standard which produced an artificially high calibration factor. A %RSD of 9.8 was obtained using a range of 200 ppm to 10,000 ppm. Since the initial calibration exceeds the recommended QC criteria of 20.0%, the detected results for diesel in all project samples are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blank at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instruments blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 There were no field replicate samples submitted for analysis with this project sample set.

H. Surrogate Recoveries:

H.1 Surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number TW (tap water) was used for the water matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for all project sample analyses.

K. Quantitation and Identification:

K.1 The PQL of the water samples was raised to 2500 ppm by the reviewer since the low point of the initial calibration was 50 ppm.

K.2 The laboratory did not submit the raw data for sample BTR-LF01-SW01, even though results for this sample were reported on the summary result page. Since no raw data was submitted for sample result verification, the results are qualified "R" as rejected and unusable.

K.3 No other problems with compound quantitation and identification were observed for this project sample set.

L. Conclusion:

L.1 Due to previously mentioned problems in Section K.2, the results for sample BTR-LF01-SW01 are qualified "R" as rejected and unusable.

L.2 Diesel was not detected in the method blank or in all other samples at a concentration above the PQL (2500 ppm) and the results are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Water
DATE: April 25, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 6 water and 6 soil samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 474). Six water samples were requested for diesel analyses by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 8 and 9, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF01-2SW01	1663	Water
BTR-LF01-2SW02	1664	Water
BTR-LF01-2SW03	1665	Water
BTR-LF01-2SW04	1666	Water
BTR-LF04-2SW01	1669	Water
BTR-LF04-2SW02	1670	Water

It should be noted that all quantitation limits reported by the laboratory for diesel for project water samples were higher than those specified in the Project Sampling and Analysis Plan. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document " National Functional

Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a 6 point initial calibration on GC instrument ICF5 on 8/28/93. The attempted range of the initial calibration was from 10 ppm to 10,000 ppm. Due to low sensitivity and interference, the 10 ppm calibration standard was deleted from the calibration. A percent relative standard deviation (%RSD) of 41.6% was calculated using calibration factors determined from the initial 5 point calibration. The RSD of 41.6% exceeds the recommended QC criteria of 20.0%, primarily due to the interference in the 50 ppm calibration standard which produced an artificially high calibration factor. A %RSD of 9.8 was obtained using a range of 200 ppm to 10,000 ppm. Since the initial calibration exceeds the recommended QC criteria of 20.0%, the detected results for diesel in the project water samples are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blank at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks associated with this project sample set.

G. Field Replicate Analyses:

G.1 There were no field replicate analyses associated with this project sample set.

H. Surrogate Recoveries:

H.1 Surrogate recoveries in samples BTR-LF01-2SW01 and BTR-LF01-2SW04 could not be verified by the reviewer due to incorrect area integration. The laboratory did not submit the corrected areas. It is the opinion of the reviewer that the quality of the data was not affected.

H.2 All other surrogate recoveries met applicable QC criteria and the results are

considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for this water sample set.

J. System Performance:

J.1 All six samples were initially analyzed on September 7, 1993, but due to GC column and ECD detector contamination they were reanalyzed on September 8 and 9, 1993 after the GC system was operating correctly.

J.2 No other problems with system performance were observed for all project water samples.

K. Quantitation and Identification:

K.1 The samples were reanalyzed due to GC column and detector contamination.

K.2 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Diesel was not detected in any of the samples at a concentration above the PQL.

L.2 The laboratory did not analyze the samples for gasoline.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Soil and Water
DATE: April 12, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 6 soil and 2 water samples from the Barter Island site on August 30, 1993 (referenced chain of custody record No. 395). Requested analyses were for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 1 and 2, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF04-SW01	1324	Water
BTR-LF04-SW02	1328	Water
BTR-LF04-S02	1334	Soil
BTR-LF04-SD01	1336	Soil
BTR-LF04-SD02	1338	Soil
BTR-LF01-SD01	1340	Soil
BTR-LF01-SD02	1342	Soil
BTR-LF01-SD03	1344	Soil

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that the quantitation limits reported by the laboratory for most of the project soil samples were higher than those specified in the Project Sampling and Analysis Plan due to a raised baseline present within the retention time window of diesel. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a 3 point initial calibration on GC instrument ICF6 on August 29, 1993. The range of the initial calibration was from 100 ppm to 10,000 ppm. Due to the sensitivity present at the 100 ppm initial calibration standard, the practical quantitation limit (PQL) of 50 ppm does not need to be raised to the low point of this initial calibration (100 ppm). All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 9.04 was calculated using calibration factors determined from the initial calibration, and is within the recommended QC limit of 20.0%.

B.1 The laboratory analyzed a 6 point initial calibration on GC instrument ICF5 on 8/28/93. The attempted range of the initial calibration was from 10 ppm to 10,000 ppm. Due to low sensitivity and interference, the 10 ppm calibration standard was deleted from the calibration. A percent relative standard deviation (%RSD) of 41.6% was calculated using calibration factors determined from the initial 5 point calibration. The RSD of 41.6% exceeds the recommended QC criteria of 20.0%, primarily due to the interference in the 50 ppm calibration standard which produced an artificially high calibration factor. A %RSD of 9.8 was obtained using a range of 200 ppm to 10,000 ppm. Since the initial calibration exceeds the recommended QC criteria of 20.0%, the detected results for diesel in all project samples are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable. However, the soil method blank (M/BLK 1318) was contaminated with lube oil from a previous analysis.

E. Instrument Blanks:

E.1 Diesel was not detected in the instruments blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 There were no field replicate samples submitted for analyses for this project sample set.

H. Surrogate Recoveries:

H.1 Surrogate recoveries were calculated by the reviewer using peak height due to incorrect area integration of the surrogate in many of the samples. All surrogate recoveries were calculated referencing the average surrogate peak height from the initial calibration. All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-AOC09-S09 was used for the soil matrix spike/matrix spike duplicate analyses. No matrix spike/matrix spike duplicate analyses were submitted for the water samples.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for all project sample analyses.

K. Quantitation and Identification:

K.1 The soil method blank and most of the soil samples exhibited a raised baseline in the diesel retention time window caused by probable hydrocarbon contamination. The PQLs have been increased to reflect this contamination. It is the opinion of the reviewer that this will have no effect on the quality of the data.

K.2 The laboratory reported detected results of 60 ppm for diesel in sample BTR-LF04-SD02. It is the opinion of the reviewer that even though the PQL for this sample is <60 ppm, diesel is actually present in the sample, and is not due to carryover from a previous sample.

K.3 Samples BTR-LF04-S02 and BTR-LF04-SD01 displayed above average PQLs due to the high percent moisture content in the samples.

K.4 Sample BTR-LF04-S02 contained biogenic hydrocarbon and lube oil contamination. No diesel was detected in the sample.

K.5 The PQL of the water samples were raised to 2500 ppm by the reviewer since the low point of the initial calibration was 50 ppm

K.6 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Diesel was not detected in the method blanks at a concentration above the PQL. The soil method blank was contaminated with lube oil from a previous sample.

L.2 Diesel was detected in sample BTR-LF04-SD02 at a concentration of 60 ppm.

L.3 The PQL of the individual samples were increased by the laboratory to account for the raised baseline present within the retention time window of diesel.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Soil
DATE: April 22, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 5 soil samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 475). Requested analyses were for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 6 and 9, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF03-2SD09	1678	Soil
BTR-LF03-2SD10	1680	Soil
BTR-AOC1-2S06	1682	Soil
BTR-AOC1-2S07	1684	Soil
BTR-AOC1-2S08	1686	Soil

The laboratory incorrectly listed the ICF site numbers for samples 1682, 1684, and 1686 on the data summary sheets as BTR-AOC1-2S06. The ICF site numbers have been corrected by the reviewer.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for diesel for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a 6 point initial calibration on GC instrument ICF5 on 8/28/93. The attempted range of the initial calibration was from 10 ppm to 10,000 ppm. Due to low sensitivity and interference, the 10 ppm calibration standard was deleted from the calibration. A percent relative standard deviation (%RSD) of 41.6% was calculated using calibration factors determined from the initial 5 point calibration. The RSD of 41.6% exceeds the recommended QC criteria of 20.0%, primarily due to the interference in the 50 ppm calibration standard which produced an artificially high calibration factor. A %RSD of 9.8 was obtained using a range of 200 ppm to 10,000 ppm. Since the initial calibration exceeds the recommended QC criteria of 20.0%, the detected results for diesel in the project water samples are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 Two of the three continuing calibration standards exceeded the QC percent recovery criteria of 75-125%. Therefore, the PQL from the associated water samples is qualified "J" as estimated and usable for limited purposes.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blank at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks associated with this project sample set.

G. Field Replicate Analyses:

G.1 There were no field replicate analyses associated with this project sample set.

H. Surrogate Recoveries:

H.1 Surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample BTR-SS14-2S06-3 was used as the QC sample for the matrix spike/matrix spike duplicate analyses. This sample was not submitted on chain of custody record No. 475.

I.2 All matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for all project sample analyses.

K. Quantitation and Identification:

K.1 Two of the continuing calibration standards exceeded the percent recovery QC criteria. Therefore the PQL of the blank and all associated samples with these calibration standards are qualified "J" as estimated and usable for limited purposes.

K.2 No other problems were observed with compound quantitation and identification.

L. Conclusion:

K.1 Diesel was not detected in any of the samples at a concentration above the PQL.

K.2 Due to previously mentioned problems with the continuing calibrations, the PQL for the associated method blank and samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Water and Soil
DATE: April 21, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 12 soil and 3 water samples from the Barter Island site on September 3, 1993 (referenced chain of custody record No. 478). Requested analyses were for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 6 and 9, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-EB-07	1716	Water
BTR-EB-08	1720	Water
BTR-SS13-2S05	1724	Soil
BTR-SS13-2S06	1726	Soil
BTR-SS13-2S07	1728	Soil
BTR-SD08-2S11	1730	Soil
BTR-SD08-2S12	1732	Soil
BTR-SD08-2S13-4	1734	Soil
BTR-SD08-2S14-4	1736	Soil
BTR-SD08-2S15-5	1738	Soil
BTR-SD08-2S16-1	1740	Soil
BTR-LF04-2SW03	1748	Water
BTR-LF04-2SD04	1744	Soil
BTR-LF04-2SD03	1742	Soil
BTR-BKGD-2SD03	1746	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-SD08-2S11 and BTR-SD08-2S12 were designated as field replicates, sample numbers BTR-SD08-2S13-4 and BTR-SD08-2S14-4 were designated as field replicates, and sample numbers BTR-EB-07 and BTR-EB-08 were designated as equipment blanks.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for the project water samples (<1000 ppb) were higher than those specified in the Project Sampling and Analysis Plan (<500 ppb). However, since the low point of the initial calibration is 50 ppm, the PQL was raised to <2500 ppm by the reviewer. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a 6 point initial calibration on GC instrument ICF5 on 8/28/93. The attempted range of the initial calibration was from 10 ppm to 10,000 ppm. Due to low sensitivity and interference, the 10 ppm calibration standard was deleted from the calibration. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 41.6% was calculated using calibration factors determined from the initial 5 point calibration. The RSD of 41.6% exceeds the recommended QC criteria of 20.0%, primarily due to the interference in the 50 ppm calibration standard which produced an artificially high calibration factor. A %RSD of 9.8 was obtained using a range of 200 ppm to 10,000 ppm. Since the initial calibration exceeds the recommended QC criteria of 20.0%, the detected results for diesel in the project water samples are qualified "J" as estimated and usable for limited purposes.

B.2 The laboratory performed a 3 point initial calibration on GC instrument ICF6 on August 29, 1993. The range of the initial calibration was from 100 ppm to 10,000 ppm. Due to the sensitivity present at the 100 ppm initial calibration standard, the practical quantitation limit (PQL) of 50 ppm does not need to be raised to the low point of this initial calibration (100 ppm). All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent

relative standard deviation (%RSD) of 9.04 was calculated using calibration factors determined from the initial calibration, and is within the recommended QC limit of 20.0%. However, since this is only a three point initial calibration curve, all detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 The two continuing calibration standards analyzed on GC instrument ICF5 exceeded (71.5 & 70.2%) the QC percent recovery criteria of 75-125%. Therefore, the PQL for the three water samples are qualified "J" as estimated and usable for limited purposes.

C.2 The continuing calibration standards analyzed on GC instrument ICF6 met all the QC criteria and are considered acceptable.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Samples BTR-EB-07 and BTR-EB-08 were designated as field equipment blanks for this project sample set.

F.2 Diesel was not detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analyses:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-SD08-2S11 and BTR-SD08-2S12 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

G.3 Samples BTR-SD08-2S13-4 and BTR-SD08-2S14-4 were also utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 Surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-AOC9-2S14.5 was used for the soil matrix spike/matrix

spike duplicate analyses. No matrix spike/matrix spike duplicate analyses were submitted for the water samples.

I.2 The matrix spike duplicate percent recovery was outside the QC criteria due to incorrect area integration by the laboratory. No action is taken solely on the MS/MSD analysis.

J. System Performance:

J.1 Some of the soil samples exhibited a raised baseline within the retention time window of diesel, and all PQLs have been adjusted accordingly by the laboratory.

J.2 No other problems with system performance were observed for all project sample analyses.

K. Quantitation and Identification:

K.1 A discrepancy exists between the result reported by the laboratory and the result regenerated by the reviewer for sample BTR-SS13-2S07. The laboratory reported a result of 87 ppm for diesel, whereas the reviewer calculated diesel at a concentration of 110 ppm. The result for this sample has been corrected on the data summary forms by the reviewer. The detected result is qualified "J" as estimated and usable for limited purposes.

K.2 The laboratory reported a detected result of 520 ppm for diesel in sample BTR-LF04-2SD03. The chromatogram and quantitation report does not support the presence of diesel in the sample. Therefore, the detected result for diesel has been changed on the data summary form by the reviewer to reflect that this analyte was not detected at a concentration above the PQL.

K.3 The PQL for some of the soil samples was raised by the laboratory due to interference present within the retention time window of diesel. It is the opinion of the reviewer that this will have no affect on the quality of the data.

K.4 No other problems were observed with compound quantitation and identification.

L. Conclusion:

K.1 Diesel was detected in sample BTR-SS13-2S07 at a concentration of 110 ppm.

K.2 The laboratory incorrectly reported diesel at a concentration of 520 ppm for sample BTR-LF04-2SD03. No diesel was detected by the reviewer and the sample result has been corrected on the data summary form.

K.3 Diesel was not detected at a concentration above the PQL in any of the other project samples.

K.4 The PQL for the three water samples was raised to <2500 ppm because the low point of the initial calibration is 50 ppm.

K.5 Due to recovery problems with the continuing calibrations on GC instrument ICF5, the PQL for the three water samples is qualified "J" as estimated and usable for limited purposes.

K.6 Due to problems with the initial calibration on GC instrument ICF6, the detected results for the soil samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Water and Soil
DATE: April 26, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 10 soil and 2 water samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 476). One water sample and 10 soil samples were requested for diesel analyses by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 6 and 7, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-EB-06	1688	Water
BTR-AOC15-2S04	1692	Soil
BTR-AOC15-2S05	1694	Soil
BTR-AOC10-2SD02	1696	Soil
BTR-AOC10-2S06-1.5	1698	Soil
BTR-AOC10-2S07	1700	Soil
BTR-AOC10-S208	1702	Soil
BTR-AOC10-2S09	1704	Soil
BTR-SS14-2S05	1706	Soil
BTR-SS14-2S06-3	1708	Soil
BTR-SS14-2S07	1710	Soil

The analytical results for the soil samples were reported with an adjustment for moisture content.

The following QC sample designations were included in project documentation: sample numbers BTR-AOC10-2S08 and BTR-AOC10-2S09 were designated as field replicates, and sample number BTR-EB-06 was designated as an equipment blank.

It should be noted that all quantitation limits reported by the laboratory for diesel for water and soil project samples were higher than those specified in the Project Sampling and Analysis Plan. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a 6 point initial calibration on GC instrument ICF5 on 8/28/93. The attempted range of the initial calibration was from 10 ppm to 10,000 ppm. Due to low sensitivity and interference, the 10 ppm calibration standard was deleted from the calibration. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 41.6% was calculated using calibration factors determined from the initial 5 point calibration. The RSD of 41.6% exceeds the recommended QC criteria of 20.0%, primarily due to the interference in the 50 ppm calibration standard which produced an artificially high calibration factor. A %RSD of 9.8 was obtained using a range of 200 ppm to 10,000 ppm. Since the initial calibration exceeds the recommended QC criteria of 20.0%, the detected results for diesel in the project water samples are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 Two of the three continuing calibration standards exceeded the percent recovery QC criteria of 75-125% due to incorrect area integration performed by the laboratory. Therefore, the PQL from the associated samples is qualified "J" as estimated and usable for limited purposes.

C.2 All other QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample number BTR-EB-06 was designated as an equipment blank.

F.2 Diesel was not detected in the equipment blank at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analyses:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC10-2S08 and BTR-AOC10-2S09 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 A discrepancy exists between the surrogate recoveries reported by the laboratory and the surrogate recoveries calculated by the reviewer, as listed below:

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-AOC15-2S04	53%	93%
BTR-AOC15-2S05	61	89
BTR-AOC10-2SD02	51	85
BTR-AOC10-2S06-1.5	75	114
BTR-AOC10-2S07	64	112
BTR-AOC10-2S08	90	81
BTR-AOC10-2S09	50	94
BTR-SS14-2S05	63	118
BTR-SS14-2S06-3	53	113
BTR-SS14-2S07	94	102

The laboratory reported the surrogate recoveries for DBC from the ECD detector instead of pentacosane used as the diesel surrogate from the FID detector. Since the recalculated surrogate recoveries met applicable QC criteria, the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-SS14-2S06-3 was used for the soil matrix spike/matrix spike duplicate analyses, and tap water was used for the water matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 Two of the continuing calibration standards and sample BTR-SS14-2S07 were incorrectly integrated by the laboratory.

J.2 No other problems with system performance were observed for all project samples.

K. Quantitation and Identification:

K.1 Two of the continuing calibrations standards exceeded the QC criteria due to incorrect integration of the diesel area by the laboratory.

K.2 A discrepancy exists between the result reported by the laboratory and the result regenerated by the reviewer for sample BTR-SS14-2S07. The laboratory reported a PQL of <60 ppm for diesel, whereas the reviewer calculated diesel at a concentration of 8460 ppm. The result for this sample has been corrected on the summary results page by the reviewer. The detected results are qualified "J" as estimated and usable for limited purposes.

K.3 Sample BTR-SS14-2S05 exhibited biogenic interference within the retention time of diesel and the PQL was raised accordingly by the laboratory.

K.4 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Diesel was detected in sample BTR-SS14-2S07 at a concentration of 8460 ppm, calculated by the reviewer, whereas the laboratory reported a PQL of 60 ppm.

L.2 Sample BTR-EB-06 exhibited a baseline below zero millivolts as displayed on the chromatogram. Therefore, the PQL is qualified "J" as estimated and usable for limited purposes.

L.3 Due to previously mentioned problems with the initial calibration and continuing calibrations, the detected results and PQL for the associated method blanks and samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Water and Soil
DATE: April 13, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 1 water and 13 soil samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 390). Requested analyses were for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on August 24 and 25, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SS14-SW01	333	Water
BTR-SS14-S01	339	Soil
BTR-SS14-S02 (1:10 DIL)	341	Soil
BTR-SS14-S03	343	Soil
BTR-SS14-S04	345	Soil
BTR-SS14-S06	347	Soil
BTR-SS14-SD01 (1:10 DIL)	349	Soil
BTR-AOC10-SD01	351	Soil
BTR-AOC10-S01	353	Soil
BTR-AOC10-S02	355	Soil
BTR-AOC10-S03	357	Soil
BTR-AOC10-S04	359	Soil
BTR-AOC10-S05	361	Soil
BTR-AOC10-S06	363	Soil

The analytical results for the soil samples were reported with an adjustment for moisture content.

The following two sets of QC sample designations were included in project documentation: sample numbers BTR-SS14-S03 and BTR-SS14-S06 along with sample numbers BTR-AOC10-S04 and BTR-AOC10-S06 were designated as field replicates.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory attempted to perform a 6 point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 50 ppm to 10,000 ppm. The 500 ppm and the 200 ppm standards were not used due to autosampler injection errors. A percent relative standard deviation (%RSD) of 48.3% was calculated using calibration factors determined from the initial calibration. The %RSD of 48.3% exceeds the recommended QC criteria of 20.0%. Since the %RSD exceeds the recommended criteria, the detected results for diesel in all the soil samples are qualified "J" as estimated and usable for limited purposes.

B.2 Due to an increase in sensitivity, a second 3 point initial calibration on GC instrument ICF6 was performed on August 28, 1993. The range of this initial calibration was from 100 ppm to 10,000 ppm. A percent relative standard deviation (%RSD) of 9.07 was calculated using calibration factors determined from the initial calibration. Since this initial calibration was performed after the samples were analyzed, it can not be used for quantitation of this sample set, but can be used as a reference to explain the increased sensitivity in this sample set.

C. Continuing Calibration:

C.1 Due to the increase in sensitivity after the initial calibration, the percent recoveries of the four continuing calibrations (169-193%) exceeded the QC criteria (75-125%). When referenced against the 3 point initial calibration analyzed after the samples were analyzed on 8/29/93, the percent recovery range of the continuing calibrations is 119-136%. It is the opinion of the reviewer that if the continuing calibration standards were integrated correctly, the percent recoveries would be somewhat lower than what was reported by the laboratory. Since the percent recoveries of the continuing calibrations exceeded the QC criteria, all detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and usable for limited purposes.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

- E. Instrument Blanks:
E.1 Diesel was not detected in the instruments blanks at a concentration above the PQL and the results are considered acceptable.
- F. Field Blanks:
F.1 There were no field blanks submitted for analysis with this project sample set.
- G. Field Replicate Analyses:
G.1 A QC limit for precision of ≤ 50 percent as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-SS14-S03 and BTR-SS14-S06 were utilized for field replicate analyses. Diesel was detected in sample BTR-SS14-S03 at a concentration of 5800 ppm, and in sample BTR-SS14-S06 at a concentration of 3100 ppm. The %RPD of this replicate analyses is 61%, exceeding the QC criteria of $\leq 50\%$. It is not known what effect this will have on the quality of the data.

G.3 Samples BTR-AOC10-S04 and BTR-AOC10-S06 were also utilized for field replicate analyses. The results met all applicable QC criteria, and the results are considered acceptable.
- H. Surrogate Recoveries:
H.1 Discrepancies exist between the surrogate recoveries reported by the laboratory and the surrogate recoveries calculated by the reviewer for all samples. This is not expected to have an affect on the quality of the data since both sets of surrogate recoveries met all of the applicable QC criteria.
- I. Matrix Spike/Matrix Spike Duplicate:
I.1 Sample number BTR-LF01-S01 was used for the soil matrix spike/matrix spike duplicate analyses. No matrix spike/matrix spike duplicate analyses were submitted for the water sample.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.
- J. System Performance:
J.1 No problems with system performance were observed for all project sample analyses.
- K. Quantitation and Identification:
K.1 The laboratory reported diesel results of 1200 ppb for water sample BTR-SS14-SW01, well below the PQL of 2500 ppb. It is the opinion of the reviewer that the submitted chromatogram does not support the presence of diesel in the sample. Therefore, the detected result for diesel in the sample has been changed on the data summary form by the reviewer to reflect that diesel was not detected at a concentration above the PQL.

K.2 Discrepancies exist between the detected results reported by the laboratory and the results regenerated by the reviewer for some of the project samples. Listed below are the sample results where discrepancies exist. Results are reported in parts per million (ppm) except where noted.

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-SS14-SW01	1200 ppb	<2500 ppb
BTR-SS14-S02	12000	12400
BTR-SS14-S03	5100	5800
BTR-SS14-S04	48000	5500
BTR-SS14-S06	5300	3100
BTR-SS14-SD01	4300	5100
BTR-AOC10-SD01	460	580

The discrepancies are probably due to inconsistent quantitation procedures performed by the laboratory, incorrect area integrations as detected on the chromatograms, or incorrect adjustment for moisture content. The laboratory was unable to reproduce some of the reported detected results for diesel which indicates that inconsistent quantitation procedures may have been used.

K.3 Samples BTR-SS14-S02 and BTR-SS14-SD01 were diluted by a factor of 10 due to high levels of diesel present in the samples.

K.4 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Diesel was detected in six of the samples at concentrations ranging between 580-12,000 ppm as described in Section K.2.

L.2 Due to the previously mentioned problems with the initial calibrations and the continuing calibrations, all data has been qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Water and Soil
DATE: April 8, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 5 soil and 3 water samples from the Barter Island site on August 21 and 22, 1993 (referenced chain of custody record No. 389). Requested analysis was for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on August 24 and 25, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC14-SW01	398	Water
BTR-AOC14-S02	400	Soil
BTR-AOC14-S01	402	Soil
BTR-AOC14-SW02	406	Water
BTR-AOC14-SW03	410	Water
BTR-LF12-S02	412	Soil
BTR-LF12-S03	414	Soil
BTR-LF12-S01	416	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-AOC14-SW02 and BTR-AOC14-SW03 were designated as field duplicates.

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets

submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document " National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory attempted to perform a 6 point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 50 ppm to 10,000 ppm. The 500 ppm and the 200 ppm standards were not used due to autosampler injection errors. A percent relative standard deviation (%RSD) of 48.3 was calculated using calibration factors determined from the initial calibration. The %RSD of 48.3% exceeds the recommended QC criteria of 20.0%.

Since the initial calibration was only a 4 point calibration curve, and the %RSD exceeds the recommended criteria, the detected results for diesel in all the samples are qualified "J" as estimated and usable for limited purposes.

B.2 Due to an increase in sensitivity, a second 3 point initial calibration on GC instrument ICF6 was performed on August 28, 1993. The range of this initial calibration was from 100 ppm to 10,000 ppm. A percent relative standard deviation (%RSD) of 9.07 was calculated using calibration factors determined from the initial calibration. Since this initial calibration was performed after the samples were analyzed, it can not be used for quantitation of this sample set, but can be used as a reference to explain the increased sensitivity in this sample set.

C. Continuing Calibration:

C.1 Due to the increase in sensitivity after the initial calibration, the percent recoveries of the four continuing calibrations (164-178%) exceeded the QC criteria (75-125%). When referenced against the 3 point initial calibration analyzed after the samples were analyzed on 8/29/93, the percent recovery range of the continuing calibrations are 115-125%. Since the percent recoveries of the continuing calibrations exceeded the QC criteria, all practical quantitation limits (PQLs) are qualified "J" as estimated and usable for limited purposes.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instruments blank at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with the project sample set.

G. Field Duplicate Analyses:

G.1 A QC limit for precision of ≤ 20 percent as measured by Relative Percent Difference (RPD) between water sample values, was specified for field duplicate comparability.

G.2 Samples BTR-AOC14-SW02 and BTR-AOC14-SW03 were utilized for field duplicate analysis. The results of the field duplicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-LF12-S03 was used for the soil matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The laboratory reported an autosampler malfunction during the injection of two initial calibration standards.

J.2 No other problems with system performance were observed for all other project sample analyses.

K. Quantitation and Identification:

K.1 The three water samples exhibited a raised baseline in the diesel retention time window. It is the opinion of the reviewer that this will have no effect on the quality of the data.

K.2 The laboratory inadvertently left out the results for Aroclor 1221 on the summary page for sample BTR-LF12-S03. The results were included by the reviewer.

K.3 No other problems were observed for compound quantitation and identification.

L. Conclusion:

L.1 Diesel was not detected in the method blanks or any of the samples.

L.2 Due to the previously mentioned problems with the continuing calibrations, all PQLs for all project samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Soil
DATE: April 18, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 12 soil samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 387). Requested analyses were for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on August 24, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC15-S01	364	Soil
BTR-AOC15-S02	366	Soil
BTR-AOC15-S03	369	Soil
BTR-AOC07-S03	370	Soil
BTR-AOC07-S04	371	Soil
BTR-AOC07-S05	372	Soil
BTR-AOC07-S06	373	Soil
BTR-AOC08-S07	374	Soil
BTR-AOC14-SD01	378	Soil
BTR-AOC14-S04	380	Soil
BTR-AOC14-SD02	381	Soil
BTR-AOC14-S03	385	Soil

The analytical results for the samples were reported with an adjustment for moisture content.

The following two sets of QC sample designations were included in project documentation: sample numbers BTR-AOC07-S06 and BTR-AOC07-S07, along with sample numbers BTR-AOC14-S03 and BTR-AOC14-S04 were designated as field replicates.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory attempted to perform a 6 point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 50 ppm to 10,000 ppm. The 500 ppm and the 200 ppm standards were not used due to autosampler injection errors. A percent relative standard deviation (%RSD) of 48.3% was calculated using calibration factors determined from the initial calibration. The %RSD of 48.3% exceeds the recommended QC criteria of 20.0%. Since the %RSD exceeds the recommended criteria, the detected results for diesel in all the samples are qualified "J" as estimated and usable for limited purposes.

B.2 Due to an increase in sensitivity, a second 3 point initial calibration on GC instrument ICF6 was performed on August 28, 1993. The range of this initial calibration was from 100 ppm to 10,000 ppm. A percent relative standard deviation (%RSD) of 9.07 was calculated using calibration factors determined from the initial calibration. Since this initial calibration was performed after the samples were analyzed, it can not be used for quantitation of this sample set, but can be used as a reference to explain the increased sensitivity in this sample set.

C. Continuing Calibration:

C.1 Due to the increase in sensitivity after the initial calibration, the percent recoveries of the two continuing calibrations (161 & 169% respectively) exceeded the QC criteria (75-125%). When referenced to the 3 point initial calibration (8/29/93) analyzed after the samples, the percent recovery range of the continuing calibrations is 113-119%. All samples were quantitated using the closest continuing calibration standard (File 098F0201). Since the percent recoveries of the continuing calibrations exceeded the QC criteria, all detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and usable for limited purposes.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blank at a concentration above the

PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instruments blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 A QC limit for precision of ≤ 50 percent as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC07-S06 and BTR-AOC07-S07 were utilized for field replicate analyses. The results met all applicable QC criteria, and the results are considered acceptable.

G.3 Samples BTR-AOC14-S03 and BTR-AOC14-S04 were also utilized for field replicate analyses. The results met all applicable QC criteria, and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 Surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-AOC14-SD02 was used for the matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The laboratory reported an autosampler malfunction during the injection of two initial calibration standards.

J.2 No problems with system performance were observed for all other project sample analyses.

K. Quantitation and Identification:

K.1 All samples were quantitated using the closest continuing calibration standard (File 098F0201).

K.2 No problems with compound quantitation and identification were observed for this project sample set.

L. Conclusion:

L.1 Diesel was detected in samples BTR-AOC15-S02 at a concentration of 1000 ppm, and BTR-AOC15-S03 at a concentration of 1300 ppm.

L.2 Due to previously mentioned problems with the initial calibration and continuing calibrations, the detected results and PQLs for all the samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Soil
DATE: April 11, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 1 soil sample from the Barter Island site on August 30, 1993 (referenced chain of custody record No. 393). Requested analysis was for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The sample was analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 1, 1993.

The ICF site identification number and corresponding FBI laboratory sample identification number is listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC09-SD01	1320	Soil

The analytical result for the soil sample was reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a 3 point initial calibration on GC instrument ICF6 on August 29, 1993. The range of the initial calibration was from 100 ppm to 10,000 ppm. Due to the sensitivity present at the 100 ppm initial calibration standard, the practical quantitation limit (PQL) of 50 ppm does not need to be raised to the low point of this initial calibration (100 ppm). All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 9.04 was calculated using calibration factors determined from the initial calibration, and is within the recommended QC limit of 20.0%.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blank at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instruments blank at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with the project sample set.

G. Field Duplicate Analyses:

G.1 There were no field duplicates submitted for analysis with the project sample set.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-AOC09-S09 was used for the soil matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for all other project sample analyses.

K. Quantitation and Identification:

K.1 The method blank and the sample exhibited a raised baseline in the diesel retention time window. It is the opinion of the reviewer that this will have no effect on the quality of the data.

K.2 Due to this raised baseline the laboratory increased the PQL of sample BTR-AOC09-S03 to <70 ppm. The laboratory should have also raised the PQL to <70 ppm for the method blank due to the same baseline problem. The PQL for the method blank has been increased to <70 ppm by the reviewer on the summary report form.

K.3 No other problems were observed for compound quantitation and identification.

L. Conclusion:

L.1 Diesel was not detected in the method blank or sample.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method D8015M
MATRIX: Soil
DATE: April 11, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 16 soil samples from the Barter Island site on August 30, 1993 (referenced chain of custody record No. 394). Requested analyses were for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 1 and 2, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC08-S01	1290	Soil
BTR-AOC08-S02	1292	Soil
BTR-AOC08-S03	1294	Soil
BTR-AOC08-S04	1296	Soil
BTR-AOC08-S05	1298	Soil
BTR-AOC08-S06	1300	Soil
BTR-AOC09-S01	1302	Soil
BTR-AOC09-S02	1304	Soil
BTR-AOC09-S03	1306	Soil
BTR-AOC09-S10	1308	Soil
BTR-AOC09-S04	1310	Soil
BTR-AOC09-S05	1312	Soil
BTR-AOC09-S06	1314	Soil
BTR-AOC09-S07	1322	Soil
BTR-AOC09-S08	1316	Soil
BTR-AOC09-S09	1318	Soil

The following two sets of QC sample designations were included in project documentation: sample numbers BTR-AOC08-S04 and BTR-AOC08-S06 along with sample numbers BTR-AOC09-S03 and BTR-AOC09-S10 were designated as field replicates.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan due to a raised baseline present within the retention time window of diesel. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a 3 point initial calibration on GC instrument ICF6 on August 29, 1993. The range of the initial calibration was from 100 ppm to 10,000 ppm. Due to the sensitivity present at the 100 ppm initial calibration standard, the practical quantitation limit (PQL) of 50 ppm does not need to be raised to the low point of this initial calibration (100 ppm). All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 9.04 was calculated using calibration factors determined from the initial calibration, and is within the recommended QC limit of 20.0%.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blank (M/BLK 1318) at a concentration above the PQL and the results are considered acceptable. However, the method blank was contaminated with lube oil from a previous analysis.

E. Instrument Blanks:

E.1 Numerous instrument blanks were analyzed due to the high levels of diesel in some of the samples. Diesel was not detected in the instruments blanks at a

concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 A QC limit for precision of ≤ 50 percent as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC08-S04 and BTR-AOC08-S06 were utilized for field replicate analyses. Diesel was detected in sample BTR-AOC08-S04 at a concentration of 732 ppm, and in sample BTR-AOC08-S06 at a concentration of 1670 ppm. The %RPD of this replicate analyses is 78%, exceeding the QC criteria of $\leq 50\%$. It is not known what effect this will have on the quality of the data.

G.3 Samples BTR-AOC09-S03 and BTR-AOC09-S10 were also utilized for field replicate analyses. The results met all applicable QC criteria, and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 Surrogate recoveries were calculated by the reviewer using peak height due to incorrect area integration of the surrogate in many of the samples. All surrogate recoveries were calculated referencing the average surrogate peak height from the initial calibration. All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-AOC09-S09 was used for the soil matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 Due to the high concentration of diesel detected in some of the samples, a longer GC bakeout time should have been employed to assist in eliminating carryover of diesel in one of the samples.

J.2 No problems with system performance were observed for all project sample analyses.

K. Quantitation and Identification:

K.1 The method blank and samples exhibited a raised baseline in the diesel retention time window caused by probable hydrocarbon contamination. The PQLs have been increased by the laboratory to reflect this contamination. It is the opinion of the reviewer that this will have no effect on the quality of the data.

K.2 The laboratory reported detected results of 140 ppm of diesel in sample BTR-AOC08-S02. The laboratory indicated that the detected results may be due to

carryover from the previous high level sample. It is also the opinion of the reviewer that the detected peaks in the sample are due to carryover. Therefore, the detected result for diesel is qualified "R" as rejected, and unusable, and the detected result has been changed to reflect the sample PQL by the reviewer on the summary result page.

K.3 The laboratory reported detected results of 50 ppm for diesel in sample BTR-AOC09-S06. It is the opinion of the reviewer that it was the laboratory's intention to report the result as "<50 ppm", but inadvertently left off the "<" symbol when transcribing the result onto the summary result page. It has been corrected on the summary result page by the reviewer.

K.4 Discrepancies exist between the detected results reported by the laboratory and the results regenerated by the reviewer for the project samples. Listed below are the sample results where discrepancies exist.

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-AOC08-S01	12,000 ppm	6,200 ppm
BTR-AOC08-S02	140 ppm	<80 ppm
BTR-AOC08-S03	310 ppm	540 ppm
BTR-AOC08-S04	650 ppm	730 ppm
BTR-AOC08-S06	1500 ppm	1,670 ppm
BTR-AOC09-S06	50 ppm	<50 ppm

It is the opinion of the reviewer that the discrepancies are probably due to inconsistent quantitation procedures. The laboratory was unable to reproduce some of the reported detected results for diesel which indicates that inconsistent quantitation procedures may have been used.

K.5 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Diesel was not detected in the method blank at the PQL, but the blank was contaminated with lube oil from a previous sample.

L.2 Diesel was detected in four samples: BTR-AOC08-S01 at 6200 ppm, BTR-AOC08-S03 at 540 ppm, BTR-AOC08-S04 at 730 ppm and BTR-AOC08-S06 at 1670 ppm as calculated by the reviewer.

L.3 The PQL of the individual samples was increased by the laboratory to account for the raised baseline present within the retention time window of diesel.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Soil
DATE: May 2, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 2 soil samples from the Barter Island site on September 3, 1993 (referenced chain of custody record No. 479). Requested analyses were for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on September 6, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC9-2S12-1.5	1752	Soil
BTR-AOC9-2S11-1.5	1754	Soil

The analytical results for the soil samples were reported with an adjustment for moisture content.

The laboratory did not include sample BTR-AOC9-2S11-1.5 on the results summary page. All results reported by the reviewer were obtained from the sample worksheets.

It should be noted that all quantitation limits reported by the laboratory for the project soil samples (<50 ppb) were higher than those specified in the Project Sampling and Analysis Plan (<10 ppb). Since the low point of the initial calibration was 50 ppm, the laboratory adjusted the practical quantitation limit (PQL) to 50. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a 3 point initial calibration on GC instrument ICF6 on August 29, 1993. The range of the initial calibration was from 100 ppm to 10,000 ppm. Due to the sensitivity present at the 100 ppm initial calibration standard, the practical quantitation limit (PQL) of 50 ppm does not need to be raised to the low point of this initial calibration (100 ppm). All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 9.04 was calculated using calibration factors determined from the initial calibration, and is within the recommended QC limit of 20.0%. However, since the initial calibration is only a 3 point calibration curve, all detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 The continuing calibration standards met all the QC criteria and are considered acceptable.

D. Laboratory Blanks:

D.1 Diesel was not detected in the method blank at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Diesel was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 There were no field replicate samples submitted for analysis with this project sample set.

H. Surrogate Recoveries:

H.1 Surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-AOC9-2S12-1.5 was used for the matrix spike/matrix spike duplicate analyses.

I.2 The laboratory did not submit the MS/MSD results on the summary results page. All results reported by the reviewer were obtained from the sample worksheets.

I.3 The reviewer could not verify the reintegrated area of the matrix spike duplicate sample because it was not submitted by the laboratory. It is the opinion of the reviewer that this will not affect the quality of the data.

J. System Performance:

J.1 No problems with system performance were observed for all project sample analyses.

K. Quantitation and Identification:

K.1 The laboratory reported a detected result of 520 ppm for diesel in sample BTR-AOC9-2S11-1.5. This sample was not reported on the data summary form, and the information was obtained from the sample worksheet by the reviewer.

K.2 Since the laboratory analyzed only a 3 point initial calibration, all detected results are qualified "J" as estimated and usable for limited purposes.

K.3 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Diesel was detected at a concentration of 520 ppm in sample BTR-AOC9-2S11-1.5.

L.2 Due to problems with the initial calibration, all detected results are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Diesel by EPA Method 8015M
MATRIX: Water and Soil
DATE: April 20, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 4 soil and 5 water samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 392). Six of the samples were requested for diesel by the semivolatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for diesel by USEPA Method 8015M (modified) (GC/FID) on August 25, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC09-SW01	316	Water
BTR-EB-04	308	Water
BTR-AOC10-SW01	304	Water
BTR-LF01-S01	322	Soil
BTR-LF04-S01	326	Soil
BTR-EB-05	328	Water

The analytical results for the soil samples were reported with an adjustment for moisture content.

The following set of QC sample designations were included in project documentation: sample numbers BTR-EB-04 and BTR-EB-05 were designated as field equipment blanks.

It should be noted that the laboratory reported results for samples BTR-LF01-S01 and BTR-LF04-S01 only, stating that samples BTR-AOC09-SW01, BTR-AOC10-SW01, BTR-EB04 and BTR-EB-05 were not reported due to extraction and/or instrument problems. By reviewing

the data it appears that the samples listed by the laboratory as being not reported were reanalyzed at a later time (evident by the raw data submitted by the laboratory). However, the reviewer could not locate the raw data for sample BTR-LF01-S01 reported by the laboratory, even though this sample was reported with results for the matrix spike/matrix spike duplicate QC sample.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8015M, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory attempted to perform a 6 point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 50 ppm to 10,000 ppm. The 500 ppm and the 200 ppm standards were not used due to autosampler injection errors. A percent relative standard deviation (%RSD) of 48.3% was calculated using calibration factors determined from the initial calibration. The %RSD of 48.3% exceeds the recommended QC criteria of 20.0%. Since the %RSD exceeds the recommended criteria, the detected results for diesel in all the samples are qualified "J" as estimated and usable for limited purposes.

B.2 Due to an increase in sensitivity, a second 3 point initial calibration on GC instrument ICF6 was performed on August 29, 1993. The range of this initial calibration was from 100 ppm to 10,000 ppm. A percent relative standard deviation (%RSD) of 9.07 was calculated using calibration factors determined from the initial calibration. Since this initial calibration was performed after the samples were analyzed, it can not be used for quantitation of this sample set, but can be used as a reference to explain the increased sensitivity in this sample set.

C. Continuing Calibration:

C.1 Due to the increase in sensitivity after the initial calibration, the percent recoveries of the three continuing calibrations (169-178%) exceeded the QC criteria (75-125%). When referenced to the 3 point initial calibration (8/29/93) analyzed after the samples, the percent recovery range of the continuing calibrations is 119-125%. All samples were quantitated using the closest continuing calibration standards. Since the percent recoveries of the continuing calibrations exceeded the QC criteria, all detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and usable for limited purposes.

- D. Laboratory Blanks:
D.1 Diesel was not detected in the method blank at a concentration above the PQL and the results are considered acceptable.
- E. Instrument Blanks:
E.1 Diesel was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.
- F. Field Blanks:
F.1 Samples BTR-EB-04 and BTR-EB-05 were designated as field equipment blanks for this project sample set.

F.2 Diesel was not detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.
- G. Field Replicate Analyses:
G.1 No field replicate samples were associated with this project sample set.
- H. Surrogate Recoveries:
H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.
- I. Matrix Spike/Matrix Spike Duplicate:
I.1 Sample number BTR-LF01-S01 was used for the matrix spike/matrix spike duplicate analyses. No water matrix spike/matrix spike duplicate analyses were submitted.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.
- J. System Performance:
J.1 The laboratory reported an autosampler malfunction during the injection of two initial calibration standards.

J.2 The laboratory reported extraction and/or instrument problems for samples BTR-AOC09-SW01, BTR-AOC10-SW01, BTR-EB-04 and BTR-EB05 resulting in non-submittal of sample results by the laboratory.

J.3 No other problems with system performance were observed for all project sample analyses.
- K. Quantitation and Identification:
K.1 All samples were quantitated using the closest continuing calibration standard.

K.2 The laboratory did not report results for samples BTR-AOC09-SW01, BTR-AOC10-SW01, BTR-EB-04 and BTR-EB-05 stating that due to extraction and/or instrument problems no quantitative results were available. However, by going

through the data the reviewer found that the laboratory did reanalyze the four samples noted above (evident by the submitted raw data). Listed below are the samples that were not reported by the laboratory, but were reported by the reviewer.

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-AOC09-SW01	--	<2500 ppm
BTR-AOC10-SW01	--	<2500 ppm
BTR-EB-04	--	<2500 ppm
BTR-EB-05	--	<2500 ppm

K.3 The reviewer was unable to locate the raw data for sample BTR-LF01-S01, even though this sample was reported with results for the matrix spike/matrix spike duplicate QC sample. Therefore, the PQL for this sample is qualified "R" as rejected and unusable.

K.4 The PQL for some of the samples was raised due to interference present within the retention time window of diesel. It is the opinion of the reviewer that this will have no affect on the quality of the data.

K.5 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Results for sample BTR-LF01-S01 are qualified "R" as rejected and unusable since the reviewer was unable to locate the raw data for verification of sample results.

L.2 Results for the three water samples were not reported by the laboratory, but were calculated by the reviewer and are reported in Section K.1.

L.3 Due to previously mentioned problems with the initial calibration and continuing calibrations, the PQL for all samples are qualified "J" as estimated and usable for limited purposes.

L.4 Diesel was not detected in any of the samples at a concentration above the PQL.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Water and Soil
DATE: April 26, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 10 soil and 2 water samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 476). All of the samples required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on September 6 and September 7, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-EB-06	1690	Water
BTR-AOC15-2S04	1692	Soil
BTR-AOC15-2S05	1694	Soil
BTR-AOC10-2SD02	1696	Soil
BTR-AOC10-2S06-1.5	1698	Soil
BTR-AOC10-2S07	1700	Soil
BTR-AOC10-S208	1702	Soil
BTR-AOC10-2S09	1704	Soil
BTR-SS14-2S05	1706	Soil
BTR-SS14-2S06-3	1708	Soil
BTR-SS14-2S07	1710	Soil
BTR-AB-03	1712	Water

The following QC sample designations were included in project documentation: sample numbers BTR-AOC10-2S08 and BTR-AOC10-2S09 were designated as field replicates, sample number BTR-EB-06 was designated as an equipment blank, and sample number BTR-AB-03 was designated as an ambient blank.

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 50 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 31.8 was calculated using calibration factors determined from the initial calibration. The 31.8% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the water samples are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a four point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 100 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 27.4 was calculated using calibration factors determined from the initial calibration. The 27.4% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the soil samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze

for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should have run continuing calibrations for the gasoline fraction, however, the response for the BTEX compounds and the surrogate compound can be used to determine if the instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Gasoline was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample number BTR-EB-06 was designated as an equipment blank and sample number BTR-AB-03 was designated as an ambient blank.

F.2 Gasoline was not detected in the equipment blank at a concentration above the PQL and the results are considered acceptable.

F.3 Gasoline was not detected in the ambient blank at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC10-2S08 and BTR-AOC10-2S09 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 All of the surrogate QC recovery criteria were met and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction.

J. System Performance:

J.1 No problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 The low point in the gasoline initial calibration performed on system 3-4 on August 24, 1994 was 100 ppb. Therefore, the PQL for gasoline in all of the samples and blanks analyzed on system 3-4 has been raised from 1 ppm to 2 ppm.

K.2 The laboratory reported a detected result for gasoline in samples BTR-AOC10-2SD02 and indicated that the detected result may be due to diesel fuel. It is the opinion of the reviewer that the detected peaks in this sample are probably due to higher molecular weight hydrocarbons. Therefore, the detected results for gasoline in this sample is qualified "J" as estimated and usable for limited purposes.

K.3 The laboratory reported a detected result of 22 ppm for gasoline in sample BTR-AOC10-2S06-1.5. It is the opinion of the reviewer that the detected peaks in this sample are probably of biogenic origin. Therefore, the detected result for gasoline in this sample is qualified "J" as estimated and usable for limited purposes.

K.4 The laboratory did not report a detected result above 1 ppm for gasoline in sample BTR-SS14-2S07. The laboratory reported detected results for the BTEX compounds in this sample and the sample chromatogram exhibits a typical hydrocarbon elution pattern. It is the opinion of the reviewer that this sample contains a combination of gasoline and higher molecular weight hydrocarbons calculated at a concentration of 700 ppm. The detected result for gasoline in this sample which was calculated by the reviewer is qualified "J" as estimated and usable for limited purposes.

K.5 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Due to the large percent RSDs in the initial calibrations and the lack of continuing calibrations, the detected results and the PQL for all project samples and blanks are qualified "J" as estimated and usable for limited purposes.

L.2 The low point in the initial calibration performed on system 3-4 was 100 ppb. Therefore, the PQL for gasoline in all of the project samples and blanks analyzed on system 3-4 has been raised to 2 ppm.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Soil
DATE: April 18, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 2 soil samples from the Barter Island site on September 3, 1993 (referenced chain of custody record No. 479). Both of the soil samples required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on September 7, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC9-2S14.5*	1752	Soil
BTR-AOC9-2S11-1.5	1754	Soil

* The ICF Site No. on the chain of custody record appears to be BTR-AOC9-2S12-1.5 which is not the same number assigned by the laboratory.

The analytical results for soils were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the

Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Water & Soil
DATE: May 3, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 12 soil samples and 1 water sample from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 387) for gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on August 24 through August 28, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC15-S01	364	Soil
BTR-AOC15-S02	366	Soil
BTR-AOC15-S03	369	Soil
BTR-AOC07-S03	370	Soil
BTR-AOC07-S04	371	Soil
BTR-AOC07-S05	372	Soil
BTR-AOC07-S06	373	Soil
BTR-AOC07-S07	374	Soil
BTR-TB-05	375	Water
BTR-AOC14-SD01	378	Soil
BTR-AOC14-S04	380	Soil
BTR-AOC14-SD02	382	Soil
BTR-AOC14-S03	386	Soil

The laboratory did not submit any raw data or data summary sheets for the gasoline fraction for sample numbers BTR-AOC07-S03 (370), BTR-AOC07-S04 (371), BTR-AOC07-S05 (372), BTR-AOC07-S06 (373), and BTR-AOC07-S07 (374).

The following QC sample designations were included in project documentation: sample numbers BTR-AOC14-S03 and BTR-AOC14-S04 were designated as field replicates and sample number BTR-TB-05 was designated as a travel blank.

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 100 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 27.4 was calculated using calibration factors determined from the initial calibration. The 27.4% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the project samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should have run continuing calibrations for the gasoline fraction, however, the response for the BTEX compounds and the surrogate compound can be used to determine if the

instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Gasoline was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample number BTR-TB-05 was designated as a travel blank.

F.2 Gasoline was not detected in the travel blank at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC14-S03 and BTR-AOC14-S04 were utilized for field replicate analysis. Due to carryover in these two samples, the PQL was raised by the reviewer and the results of the field replicate analyses could not be evaluated.

H. Surrogate Recoveries:

H.1 Because of poor copy quality on the raw data quantitation reports and chromatograms, the surrogate recovery in samples BTR-AOC15-S01 and BTR-AOC14-SD02 could not be verified by the reviewer.

H.2 All other surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction.

J. System Performance:

J.1 The laboratory did not perform any instrument blanks between several of the samples which contained high levels of gasoline. It is the opinion of the reviewer that this resulted in carryover and created interference causing an elevated baseline in some of the samples which probably did not contain gasoline. Therefore, the PQL in sample numbers BTR-AOC14-S04 and BTR-AOC14-S03 have been adjusted to compensate for the carryover.

J.2 No other problems with system performance were observed for the project sample analyses.

K. Quantitation and Identification:

K.1 Because of poor copy quality of the raw data for sample numbers BTR-AOC15-S01 and BTR-AOC14-SD02, the quantitation of these samples could not be verified by the reviewer. The laboratory did not respond to several requests to resubmit the raw data. Therefore, the PQL for these two samples is qualified "R" as rejected and is unusable.

K.2 A discrepancy exists between the detected result reported by the laboratory (160 ppm) and the result regenerated by the reviewer (280 ppm) for sample number BTR-AOC15-S03. The laboratory indicated that the discrepancy is probably due to inconsistent quantitation procedures. The laboratory was unable to reproduce some of the reported detected results for gasoline which indicates that inconsistent quantitation procedures may have been used.

K.3 Sample number BTR-AOC14-SD01 exhibited chromatographic peaks which, in the opinion of the laboratory and the reviewer, are of biogenic origin. Gasoline was not reported in this sample at a concentration above the PQL. Therefore, the PQL for gasoline in this sample has been raised to 90 ppm by the reviewer.

K.4 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Due to unreadable raw data for sample numbers BTR-AOC15-S02 and BTR-AOC14-SD02, the PQL for these two samples is qualified "R" as rejected and is unusable.

L.2 Due to carryover from a previous analysis, the PQL for sample numbers BTR-AOC14-S04 and BTR-AOC14-S02 has been raised by the reviewer.

L.3 Due to possible interference from biogenic material, the PQL for sample number BTR-AOC14-SD01 has been raised by the reviewer.

L.4 Due to the large percent RSD in the initial calibration and the lack of continuing calibrations for the gasoline fraction, the detected results and the PQL for gasoline in all other project samples and blanks are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Water and Soil
DATE: April 7, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 5 soil and 3 water samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 389). All of the samples required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on August 24, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC14-SW01	398	Water
BTR-AOC14-S02	400	Soil
BTR-AOC14-S01	402	Soil
BTR-AOC14-SW02	406	Water
BTR-AOC14-SW03	410	Water
BTR-LF12-S02	412	Soil
BTR-LF12-S03	414	Soil
BTR-LF12-S01	416	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-AOC14-SW02 and BTR-AOC14-SW03 were designated as field duplicates.

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 50 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 31.8 was calculated using calibration factors determined from the initial calibration. The 31.8% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the soil samples are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a four point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 100 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 27.4 was calculated using calibration factors determined from the initial calibration. The 27.4% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the water samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should have run continuing calibrations for the gasoline fraction, however, the response for the BTEX compounds and the surrogate compound can be used to determine if the

instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Gasoline was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with the project sample set.

G. Field Duplicate Analysis:

G.1 A QC limit for precision of $\leq 20\%$, as measured by Relative Percent Difference (RPD) between water sample values, was specified for field duplicate comparability.

G.2 Samples BTR-AOC14-SW02 and BTR-AOC14-SW03 were utilized for field duplicate analysis. The results of the field duplicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 All of the surrogate QC recovery criteria were met and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction.

J. System Performance:

J.1 No problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 The low point in the gasoline initial calibration performed on system 3-4 on August 24, 1994 was 100 ppb. Therefore, the PQLs for gasoline in all of the water samples analyzed on system 3-4 have been raised from 50 ppb to 100 ppb.

K.2 No problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Gasoline was not detected above the PQL in any of the project samples.

L.2 Due to previously mentioned problems with the initial calibration and the lack of continuing calibrations, the PQLs for all project samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Soil
DATE: April 21, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 5 soil samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 475) for gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on September 7, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF03-2SD09	1678	Soil
BTR-LF03-2SD10	1680	Soil
BTR-AOC1-2S06	1682	Soil
BTR-AOC1-2S07	1684	Soil
BTR-AOC1-2S08	1686	Soil

The laboratory incorrectly listed the ICF site numbers for samples 1682, 1684, and 1686 on the data summary sheets as BTR-AOC1-2S06. The ICF site numbers have been corrected by the reviewer.

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 100 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 27.4 was calculated using calibration factors determined from the initial calibration. The 27.4% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the project samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should have run continuing calibrations for the gasoline fraction, however, the response for the BTEX compounds and the surrogate compound can be used to determine if the instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Replicate Analysis:

F.1 There were no field replicate samples associated with this project sample set.

G. Surrogate Recoveries:

G.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

H. Matrix Spike/Matrix Spike Duplicate Analyses:

H.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction. -

I. System Performance:

I.1 No problems with system performance were observed for the project sample analyses.

J. Quantitation and Identification:

J.1 The low point in the gasoline initial calibration performed on August 24, 1994 was 100 ppb. Therefore, the PQL for gasoline in all of the samples and blanks has been raised from 1 ppm to 2 ppm.

J.2 The laboratory reported a detected result for gasoline in samples BTR-AOC1-2S07 and indicated that the detected result may be due to diesel fuel. It is the opinion of the reviewer that the detected peaks in this sample are probably due to higher molecular weight hydrocarbons. Therefore, the detected result for gasoline in this sample is qualified "J" as estimated and usable for limited purposes.

J.3 No other problems were observed with compound quantitation and identification.

K. Conclusion:

K.1 Due to the large percent RSD in the initial calibration and the lack of continuing calibrations for the gasoline fraction, the detected results and the PQL for gasoline in all project samples and blanks are qualified "J" as estimated and usable for limited purposes.

ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Water and Soil
DATE: April 19, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 12 soil and 3 water samples from the Barter Island site on September 3, 1993 (referenced chain of custody record No. 478). All of the soil samples required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on September 7 and September 8, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-EB-07	1716	Water
BTR-EB-08	1720	Water
BTR-SS13-2S05	1724	Soil
BTR-SS13-2S06	1726	Soil
BTR-SS13-2S07	1728	Soil
BTR-SD08-2S11	1730	Soil
BTR-SD08-2S12	1732	Soil
BTR-SD08-2S13-4	1734	Soil
BTR-SD08-2S14-4	1736	Soil
BTR-SD08-2S15-5	1738	Soil
BTR-SD08-2S16-1	1740	Soil

BTR-LF04-2SW03	1748	Water
BTR-LF04-2SD04	1744	Soil
BTR-LF04-2SD03	1742	Soil
BTR-BKGD-2SD03	1746	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-SD08-2S11 and BTR-SD08-2S12 were designated as field replicates, sample numbers BTR-SD08-2S13-4 and BTR-SD08-2S14-4 were designated as field replicates, and samples BTR-EB-07 and BTR-EB-08 were designated as equipment blanks.

The analytical results for soils were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 50 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 31.8 was calculated using calibration factors determined from the initial calibration. The 31.8% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should have run continuing calibrations for the gasoline fraction, however, the response for the BTEX compounds and the surrogate compound can be used to determine if the

instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Gasoline was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample numbers BTR-EB-07 and BTR-EB-08 were designated as equipment blanks.

F.2 Gasoline was not detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-SD08-2S11 and BTR-SD08-2S12 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

G.3 Samples BTR-SD08-2S13-4 and BTR-SD08-2S14-4 were also utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 All of the surrogate QC recovery criteria were met for all project samples and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction.

J. System Performance:

J.1 The laboratory reported a detected result for gasoline of 1 ppm in samples BTR-SD08-2S12 and BTR-SD08-2S16-1. It is the opinion of the reviewer that the detected peaks in these two samples are due to carryover of hydrocarbons from a

sample analyzed prior to these analyses. Therefore, the detected results in these two samples have been changed to reflect that gasoline was not detected at a concentration above the PQL.

J.2 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 The laboratory reported detected results for gasoline in samples BTR-SS13-2S07 and BTR-LF04-2SD04 and indicated that the detected results may be due to diesel fuel. It is the opinion of the reviewer that the detected peaks in these samples are probably due to higher molecular weight hydrocarbons. Therefore, the detected results for gasoline in these samples are qualified "J" as estimated and usable for limited purposes.

K.2 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Due to carryover from a previous sample, the detected results in samples BTR-SD08-2S12 and BTR-SD08-2S16-1 have been changed to reflect that gasoline was not detected in these samples at a concentration above the PQL.

L.2 Due to a large %RSD in the initial calibration and the lack of continuing calibrations for gasoline, all detected results and the PQL for all project samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Water and Soil
DATE: April 14, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 13 soil samples and 1 water sample from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 390). All of the samples required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on August 23 and August 24, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SS14-SW01	336	Water
BTR-SS14-S01	339	Soil
BTR-SS14-S02	341	Soil
BTR-SS14-S03	343	Soil
BTR-SS14-S04	345	Soil
BTR-SS14-S06	347	Soil
BTR-SS14-SD01	349	Soil
BTR-AOC10-SD01	351	Soil
BTR-AOC10-S01	353	Soil
BTR-AOC10-S02	355	Soil
BTR-AOC10-S03	357	Soil

BTR-AOC10-S04	359	Soil
BTR-AOC10-S05	361	Soil
BTR-AOC10-S06	363	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-AOC10-S04 and BTR-AOC10-S06 were designated as field replicates, and sample numbers BTR-SS14-S03 and BTR-SS14-S06 were also designated as field replicates.

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 50 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 31.8 was calculated using calibration factors determined from the initial calibration. The 31.8% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the soil samples are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a four point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 100 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 27.4 was calculated using calibration factors determined from the initial calibration. The 27.4% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the water samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should have run continuing calibrations for the gasoline fraction, however, the response for the BTEX compounds and the surrogate compound can be used to determine if the instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Gasoline was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with the project sample set.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC10-S04 and BTR-AOC10-S06 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

G.3 Samples BTR-SS14-S03 and BTR-SS14-S06 were also utilized for field replicate analysis. The results of the field replicate analyses (71% RPD) exceed the QC criteria. The large variability in the results is probably due to carryover contamination between samples. It is not known what affect this will have on the quality of the data.

H. Surrogate Recoveries:

H.1 Several of the surrogate recoveries could not be calculated using the FID detector because of hydrocarbon interference. The laboratory used the ECD detector to calculate the surrogate recoveries of samples exhibiting interference on the FID detector. However, the ECD response for the Surrogate (BFB) was saturated for all of the samples. Listed below are the samples that exhibited hydrocarbon

interference.

<u>ICF Sample No.</u>	<u>Laboratory Recovery</u>
BTR-SS14-S02	103
BTR-SS14-S03	96
BTR-SS14-S04	97
BTR-SS14-S06	94
BTR-SS14-SD01	103
BTR-AOC10-SD01	100
BTR-AOC10-S01	100

It is the opinion of the reviewer that this will not affect the quality of the data because there is no affect on the gasoline quantitation.

H.2 All other surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction.

J. System Performance:

J.1 The laboratory did not perform any instrument blanks between several of the samples which contained high levels of gasoline. It is the opinion of the reviewer that this resulted in carryover in some of the samples, and created interference and an elevated baseline in some of the samples which probably did not contain gasoline. Therefore, all of the detected results are qualified "J" as estimated and usable for limited purposes, and some of the PQLs have been adjusted to compensate for the carryover.

J.2 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 The low point in the gasoline initial calibration performed on system 3-4 on August 24, 1994 was 100 ppb. Therefore, the PQLs for gasoline in all of the samples and blanks analyzed on system 3-4 have been raised from 50 ppb to 100 ppb.

K.2 Gasoline was detected in samples BTR-SS14-S02, BTR-SS14-S03, and BTR-SS14-S04 at a concentration above the initial calibration range of the instrument. The laboratory did not analyze a secondary dilution for these samples. Therefore, the detected results for these samples are qualified "J" as estimated and usable for limited purposes.

K.3 Discrepancies exist between the detected results reported by the laboratory and the results regenerated by the reviewer for some of the project samples. Listed

below are the sample results where discrepancies exist. Results are reported in parts per million (ppm).

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-SS14-S02	250	208
BTR-SS14-S04	170	118
BTR-SS14-S06	130	190
BTR-AOC10-SD01	< 2	27
BTR-AOC10-S01	3.2	46

The laboratory indicated that the discrepancies are probably due to inconsistent quantitation procedures. The laboratory was unable to reproduce some of the reported detected results for gasoline which indicates that inconsistent quantitation procedures may have been used. The detected amounts in samples BTR-AOC10-SD01 and BTR-AOC10-S01 are probably due to carryover from previous samples, therefore, the PQLs have been increased accordingly by the reviewer.

K.4 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Due to carryover from previous samples, the PQL in some of the project samples have been increased by the reviewer.

L.2 Due to previously mentioned problems with the initial calibration, the lack of continuing calibrations, and carryover in some of the samples, the detected results and PQL for all project samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Water and Soil
DATE: April 13, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 6 soil and 3 water samples from the Barter Island site on August 30, 1993 (referenced chain of custody record No. 395). All of the samples required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on September 1 and September 2, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF04-SW01	1326	Water
BTR-LF04-SW02	1330	Water
BTR-LF04-S02	1334	Soil
BTR-LF04-SD01	1336	Soil
BTR-LF04-SD02	1338	Soil
BTR-LF01-SD01	1340	Soil
BTR-LF01-SD02	1342	Soil
BTR-LF01-SD03	1344	Soil
BTR-TB-04	1346	Water

The following QC sample designations were included in project documentation: sample

number BTR-TB-04 was designated as a travel blank.

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 50 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 31.8 was calculated using calibration factors determined from the initial calibration. The 31.8% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the samples analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a four point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 100 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 27.4 was calculated using calibration factors determined from the initial calibration. The 27.4% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the samples analyzed on system 3-4 are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should

have run continuing calibrations for the gasoline fraction, however, the response for the BTEX compounds and the surrogate compound can be used to determine if the instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Gasoline was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Gasoline was not detected in the travel blank at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analysis:

G.1 There were no field replicate samples associated with this project sample set.

H. Surrogate Recoveries:

H.1 A discrepancy exists between the surrogate recovery reported by the laboratory (84%) and the surrogate recovery calculated by the reviewer (104%) for sample number BTR-TB-04. This is not expected to have an affect on the data since the surrogate recovery met all of the applicable QC criteria.

H.2 All of the surrogate QC recovery criteria were met for all other project samples and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction.

J. System Performance:

J.1 No problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 No problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Gasoline was not detected above the PQL in any of the project samples.

L.2 Due to the lack of continuing calibrations, the PQL for all project samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Soil
DATE: April 12, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 16 soil samples from the Barter Island site on August 30, 1993 (referenced chain of custody record No. 394). All of the soil samples required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on September 1 and September 2, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC08-S01	1290	Soil
BTR-AOC08-S02	1292	Soil
BTR-AOC08-S03	1294	Soil
BTR-AOC08-S04	1296	Soil
BTR-AOC08-S05	1298	Soil
BTR-AOC08-S06	1300	Soil
BTR-AOC09-S01	1302	Soil
BTR-AOC09-S02	1304	Soil
BTR-AOC09-S03	1306	Soil
BTR-AOC09-S10	1308	Soil
BTR-AOC09-S04	1310	Soil

BTR-AOC09-S05	1312	Soil
BTR-AOC09-S06	1314	Soil
BTR-AOC09-S07	1322	Soil
BTR-AOC09-S08	1316	Soil
BTR-AOC09-S09	1318	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-AOC08-S04 and BTR-AOC08-S06 were designated as field replicates, and sample numbers BTR-AOC09-S03 and BTR-AOC09-S10 were also designated as field replicates.

The analytical results for soils were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 50 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 31.8 was calculated using calibration factors determined from the initial calibration. The 31.8% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should have run continuing calibrations for the gasoline fraction, however, the response for

the BTEX compounds and the surrogate compound can be used to determine if the instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Gasoline was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with the project sample set.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC08-S04 and BTR-AOC08-S06 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

G.3 Samples BTR-AOC09-S03 and BTR-AOC09-S10 were also utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 Discrepancies exist between the surrogate recoveries reported by the laboratory and the surrogate recoveries calculated by the reviewer for some of the project samples. The recoveries reported by the laboratory and the recoveries calculated by the reviewer are listed below.

<u>ICF Sample No.</u>	<u>Laboratory Recovery</u>	<u>Validation Recovery</u>
BTR-AOC09-S09	123	81
BTR-AOC08-S01	98	100
BTR-AOC08-S04	82	103
BTR-AOC08-S06	79	100

This is not expected to have an affect on the data since the surrogate recoveries met all of the applicable QC criteria.

H.2 All of the surrogate QC recovery criteria were met for all other project samples.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction.

J. System Performance:

J.1 The laboratory indicated that the data acquisition for sample BTR-AOC09-S08 (1316) was interrupted during analysis. No data is available because the laboratory did not reanalyze this sample.

J.2 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 Discrepancies exist between the detected results reported by the laboratory and the results regenerated by the reviewer for some of the project samples. Listed below are the sample results where discrepancies exist. Results are reported in parts per million (ppm).

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-AOC08-S01	9	19
BTR-AOC08-S03	60	295
BTR-AOC08-S04	62	52
BTR-AOC08-S06	90	65

The laboratory indicated that the discrepancies are probably due to inconsistent quantitation procedures. The laboratory was unable to reproduce some of the reported detected results for gasoline which indicates that inconsistent quantitation procedures may have been used.

K.2 The laboratory raised the PQL for gasoline in sample BTR-AOC08-S05 to 4 ppm because of interference. It is the opinion of the reviewer that the interference is due to biogenic material in the sample.

K.3 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 The laboratory did not provide data for sample BTR-AOC08-S08 (1316) because data acquisition was interrupted during analysis of this sample. The laboratory did not reanalyze the sample.

L.2 Due to previously mentioned problems with the initial calibration, continuing calibration, and sample quantitation, all detected results and PQLs for all project samples are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Soil
DATE: April 11, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 1 soil sample from the Barter Island site on August 21, 1993 (referenced chain of custody record No. 393). The sample required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The sample was analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on September 1, 1993.

The ICF site identification number and corresponding FBI laboratory sample identification number is listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC09-SD01	1320	Soil

The analytical result for the soil sample was reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil

samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 50 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 31.8 was calculated using calibration factors determined from the initial calibration. The 31.8% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the soil samples are qualified "J" as estimated and are usable for limited purposes.

L.1 Gasoline was not detected above the PQL in the project sample.

L.2 Due to the lack of continuing calibrations, the PQL for the project sample is qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: Gasoline by USEPA Method 8015M
MATRIX: Water and Soil
DATE: April 20, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 4 soil and 5 water samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 392). Four of the water samples and two of the soil samples required gasoline analysis by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for gasoline by USEPA Method 8015M (modified) (GC/FID) on August 23 and August 24, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC09-SW01	317	Water
BTR-EB-04	311	Water
BTR-AOC10-SW01	307	Water
BTR-LF01-S01	322	Soil
BTR-LF04-S01	326	Soil
BTR-EB-05	332	Water

Results are not available for sample BTR-LF01-S01 because the laboratory did not analyze this sample.

The following QC sample designations were included in project documentation: sample numbers BTR-EB-04 and BTR-EB-05 were designated as equipment blanks.

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M, and the Project Sampling and Analysis Plan.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 50 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 31.8 was calculated using calibration factors determined from the initial calibration. The 31.8% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the soil samples are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a four point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 100 ppb to 5000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 27.4 was calculated using calibration factors determined from the initial calibration. The 27.4% RSD exceeds the recommended 20.0% RSD, therefore, the detected results for gasoline in all of the water samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory did not perform any continuing calibrations for the gasoline fraction. The laboratory indicated that since the same injection was used to analyze for gasoline and the BTEX compounds, the continuing calibration response on the FID for the BTEX compounds and the surrogate were used to determine linearity for the gasoline fraction. It is the opinion of the reviewer that the laboratory should have run continuing calibrations for the gasoline fraction, however, the response for the BTEX compounds and the surrogate compound can be used to determine if the

instrument has maintained linearity for the gasoline fraction. Because the laboratory did not perform any continuing calibrations specifically for the gasoline fraction, the detected results and the practical quantitation limits (PQLs) are qualified "J" as estimated and are usable for limited purposes.

C.2 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 Gasoline was not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Gasoline was not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample numbers BTR-EB-04 and BTR-EB-05 were designated as equipment blanks.

F.2 Gasoline was not detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analysis:

G.1 There were no field replicate analyses associated with this project sample set.

H. Surrogate Recoveries:

H.1 All of the surrogate QC recovery criteria were met and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The laboratory did not perform any matrix spike/matrix spike duplicate analyses for the gasoline fraction.

J. System Performance:

J.1 No problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 The low point in the gasoline initial calibration performed on system 3-4 on August 24, 1994 was 100 ppb. Therefore, the PQL for gasoline in all of the samples and blanks analyzed on system 3-4 has been raised from 50 ppb to 100 ppb.

K.2 Results are not available for sample number BTR-LF01-S01 because the laboratory did not analyze this sample.

K.3 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Gasoline was not detected at a concentration above the PQL in any of the project samples.

L.2 Due to the lack of continuing calibrations, the PQL for all project samples and blanks are qualified "J" as estimated and usable for limited purposes.

L.3 The low point in the initial calibration performed on system 3-4 was 100 ppb. Therefore, the PQL for gasoline in all of the project samples and blanks analyzed on system 3-4 has been raised to 100 ppb.

DATA VALIDATION REPORT

LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: BTEX compounds by USEPA Method 8020
MATRIX: Soil
DATE: April 12, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 16 soil samples from the Barter Island site on August 30, 1993 (referenced chain of custody record No. 394). All of the soil samples required analysis for the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed on September 1 and September 2, 1993 for the BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC08-S01	1290	Soil
BTR-AOC08-S02	1292	Soil
BTR-AOC08-S03	1294	Soil
BTR-AOC08-S04	1296	Soil
BTR-AOC08-S05	1298	Soil
BTR-AOC08-S06	1300	Soil
BTR-AOC09-S01	1302	Soil
BTR-AOC09-S02	1304	Soil
BTR-AOC09-S03	1306	Soil
BTR-AOC09-S10	1308	Soil
BTR-AOC09-S04	1310	Soil
BTR-AOC09-S05	1312	Soil
BTR-AOC09-S06	1314	Soil

BTR-AOC09-S07	1322	Soil
BTR-AOC09-S08	1316	Soil
BTR-AOC09-S09	1318	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-AOC08-S04 and BTR-AOC08-S06 were designated as field replicates, and sample numbers BTR-AOC09-S03 and BTR-AOC09-S10 were also designated as field replicates.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for soils were reported with an adjustment for moisture content.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC08-S04 and BTR-AOC08-S06 were utilized for field replicate analysis. The RPD for ethylbenzene (120%) and the RPD for xylene (66%) detected in the two samples exceeds the QC limit for precision. It is not known what affect this has on the quality of the data.

G.3 Samples BTR-AOC09-S03 and BTR-AOC09-S10 were also utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 Discrepancies exist between the surrogate recoveries reported by the laboratory and the surrogate recoveries calculated by the reviewer for some of the project samples. The recoveries reported by the laboratory and the recoveries calculated by the reviewer are listed below.

<u>ICF Sample No.</u>	<u>Laboratory Recovery</u>	<u>Validation Recovery</u>
BTR-AOC09-S09	123	81
BTR-AOC08-S01	98	100
BTR-AOC08-S04	82	103
BTR-AOC08-S06	79	100

This is not expected to have an affect on the data since the surrogate recoveries met all of the applicable QC criteria.

H.2 All other surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-AOC09-S09 was used for the matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The laboratory indicated that data acquisition for sample BTR-AOC09-S08 (1316) was interrupted during analysis. No data is available because the laboratory did not reanalyze this sample.

J.2 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 The laboratory raised the PQLs for the BTEX compounds in sample BTR-AOC08-S05 because of interference. It is the opinion of the reviewer that the interference is due to biogenic material in the sample.

K.2 The laboratory reported detected results for ethylbenzene in sample BTR-AOC09-S01, and for total xylenes in samples BTR-AOC09-S01 and BTR-AOC09-S02. It is the opinion of the reviewer that this is due to carryover from a previous sample. In addition, the detected results for these analytes in these samples were not confirmed by the PID detector. Therefore, the detected results reported in these samples have been changed on the data summary forms by the reviewer to reflect that the target analytes were not detected at concentrations above the PQLs.

K.3 A discrepancy exists between the detected result for toluene reported by the laboratory (0.3 ppm) and the result regenerated by the reviewer (1.0 ppm) for sample number BTR-AOC08-S03. It appears that the laboratory may not have corrected the analytical result for the moisture content in the sample.

K.4 Compound identification was confirmed using a second column and an alternate detector.

K.5 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 The laboratory did not provide data for sample BTR-AOC08-S08 (1316) because data acquisition was interrupted during analysis of this sample. The laboratory did not reanalyze the sample.

L.2 Due to the high percent RSDs in the initial calibration for certain analytes, select data are considered estimated and usable for limited purposes.

L.3 Due to the lack of confirmation on the alternate detector and possible carryover from a previous sample, the detected results for certain compounds in some samples have been changed to reflect that they are not present at concentrations above the PQLs.

L.4 All other data are considered valid and usable for all purposes.

LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: BTEX compounds by USEPA Method 8020
MATRIX: Soil
DATE: April 11, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 1 soil sample from the Barter Island site on August 21, 1993 (referenced chain of custody record No. 393). The sample required analysis for the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The sample was analyzed for the BTEX compounds by USEPA Method 8020 on September 1, 1993.

The ICF site identification number and corresponding FBI laboratory sample identification number is listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC09-SD01	1320	Soil

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical result for the soil sample was reported with an adjustment for moisture content.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 All other QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the PQLs and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQLs and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analysis:

G.1 There were no field replicate samples associated with this project sample set.

H. Surrogate Recoveries:

H.1 All of the surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-AOC09-SD01 was used for the soil matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the

results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for the project sample.

K. Quantitation and Identification:

K.1 No problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 There were no target analytes detected above the PQLs in the project sample.

L.2 All other data are considered valid and usable for all purposes.

REVIEWER: Keith Strout
ANALYSIS: BTEX compounds by USEPA Method 8020
MATRIX: Soil
DATE: April 18, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 2 soil samples from the Barter Island site on September 3, 1993 (referenced chain of custody record No. 479). Both of the soil samples required analysis for the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed on September 7, 1993 for the BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC9-2S14.5*	1752	Soil
BTR-AOC9-2S11-1.5	1754	Soil

* The ICF Site No. on the chain of custody record appears to be BTR-AOC9-2S12-1.5 which is not the same number assigned by the laboratory.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results were reported with an adjustment for moisture content.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 All QC criteria for the BTEX continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analysis:

G.1 There were no field replicate samples associated with this project sample set.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-AOC9-2S14.5 was used for the matrix spike/matrix spike

duplicate analyses.

I.2 All of the BTEX matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 Compound identification was confirmed using a second column and an alternate detector.

K.2 No problems were observed for compound quantitation and identification.

L. Conclusion:

L.1 Due to the high percent RSDs in the initial calibration for certain analytes, select data are considered estimated and usable for limited purposes.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: HVOCs by USEPA Method 8010 and BTEX compounds by USEPA Method 8020
MATRIX: Water and Soil
DATE: April 20, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 4 soil and 5 water samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 392). Four of the water samples and two of the soil samples required analysis for halogenated volatile organic compounds (HVOCs) and the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. One of the water samples required analysis for the BTEX compounds only. The samples were analyzed on August 23 and August 24, 1993 for HVOCs by USEPA Method 8010, and BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC09-SW01	317	Water
BTR-EB-04	311	Water
BTR-AB-02	315	Water
BTR-AOC10-SW01	307	Water
BTR-LF01-S01	322	Soil
BTR-LF04-S01	326	Soil
BTR-EB-05	332	Water

Results are not available for sample number BTR-LF01-S01 because the laboratory did not analyze this sample.

The following QC sample designations were included in project documentation: sample

numbers BTR-EB-04 and BTR-EB-05 were designated as equipment blanks and sample number BTR-AB-02 was designated as an ambient blank.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for HVOCs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a five point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
ethylbenzene	23.2 %
m & p-xylene	22.6 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 3-4 are qualified "J" as estimated and are usable for limited purposes.

B.3 The laboratory was unable to demonstrate linearity throughout the quantitation range using the ECD detector on system 1-2 because the detector was saturated at low concentrations. It is the opinion of the reviewer that the ECD detector can be used only to confirm the presence of the halogenated compounds. Quantitation of the halogenated compounds should have been done on the PID or FID detector when possible, and only if compound detection was confirmed on the ECD.

C. Continuing Calibrations:

C.1 The continuing calibrations were performed at a concentration of 100 ppb. At this concentration, the system 1-2 ECD response for all of the halogenated compounds, including the surrogate BFB, is saturated. The ECD detector on system 1-2 should only be used to confirm the presence of the halogenated compounds. Therefore, the PQL for the HVOC compounds in all samples and blanks analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

C.2 The baseline on the PID detector on system 1-2 was not properly set during the analysis of this project sample set. It is the opinion of the reviewer that the PID detector on system 1-2 should not have been used for quantitation, but used only to confirm the presence of the BTEX compounds.

C.3 All other QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample numbers BTR-EB-04 and BTR-EB-05 were designated as equipment blanks and sample number BTR-AB-02 was designated as an ambient blank.

F.2 No target analytes were detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.

F.3 No target analytes were detected in the ambient blank at a concentration above the PQL and the results are considered acceptable.

- G. Field Replicate Analysis:
G.1 There were no field replicate analyses associated with this project sample set.
- H. Surrogate Recoveries:
H.1 All of the surrogate QC recovery criteria were met and the results are considered acceptable.
- I. Matrix Spike/Matrix Spike Duplicate Analyses:
I.1 Sample number BTR-LF12-S03 was used for the soil matrix spike/matrix spike duplicate analyses, and sample number BTR-AOC14-SW01 was used for the water matrix spike/matrix spike duplicate analyses. Neither of these samples were included on chain of custody record No. 392.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.
- J. System Performance:
J.1 The ECD and PID detectors on system 1-2 were not operating properly and should only be used to confirm the presence of the HVOCs and BTEX compounds.

J.2 No other problems with system performance were observed for the project samples.
- K. Quantitation and Identification:
K.1 The laboratory reported detected results for toluene (8 ppb), ethylbenzene (15 ppb), and total xylene (12 ppb) in sample number BTR-EB-04. The confirmation detector provides no evidence that these compounds are present above the PQLs. Since the PID detector did not show any response for these compounds it is the opinion of the reviewer that these compounds are not present in the samples above the PQLs. Therefore, the detected results for these compounds in sample BTR-EB-04 has been changed on the data summary form to reflect that they were not detected at concentrations above the PQLs.

K.2 Results are not available for sample number BTR-LF01-S01 because the laboratory did not analyze this sample.

K.3 No other problems were observed with compound quantitation and identification.
- L. Conclusion:
L.1 No target analytes were detected at a concentration above the PQL in any of the project samples.

L.2 Due to performance problems with the ECD and PID on system 1-2, the PQL for the HVOC compounds in all samples and blanks analyzed on system 1-2 are qualified "J" as estimated and usable for limited purposes.

L.3 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: HVOCs by USEPA Method 8010 and BTEX compounds by USEPA Method 8020
MATRIX: Water and Soil
DATE: April 15, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 13 soil samples and 1 water sample from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 390). All of the samples required analysis for halogenated volatile organic compounds (HVOCs) and the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed on August 23 and August 24, 1993 for HVOCs by USEPA Method 8010, and BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SS14-SW01	336	Water
BTR-SS14-S01	339	Soil
BTR-SS14-S02	341	Soil
BTR-SS14-S03	343	Soil
BTR-SS14-S04	345	Soil
BTR-SS14-S06	347	Soil

363

Soil
Soil

The following QC sample designations were included in project documentation: sample numbers BTR-AOC10-S04 and BTR-AOC10-S06 were designated as field replicates, and sample numbers BTR-SS14-S03 and BTR-SS14-S06 were also designated as field replicates.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for HVOCs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a five point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the

initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
ethylbenzene	23.2 %
m & p-xylene	22.6 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 3-4 are qualified "J" as estimated and are usable for limited purposes.

B.3 The laboratory was unable to demonstrate linearity throughout the quantitation range using the ECD detector because the detector was saturated at low concentrations. It is the opinion of the reviewer that the ECD detector can be used only to confirm the presence of the halogenated compounds. Quantitation of the halogenated compounds should have been done on the PID or FID detector when possible, and only if compound detection was confirmed on the ECD.

C. Continuing Calibrations:

C.1 The continuing calibrations were performed at a concentration of 100 ppb. At this concentration, the system 1-2 ECD response for all of the halogenated compounds, including the surrogate BFB, is saturated. Therefore, the ECD detector on system 1-2 should only be used to confirm the presence of the halogenated compounds.

C.2 The baseline on the PID detector on system 1-2 was not properly set during the analysis of this project sample set. It is the opinion of the reviewer that the PID detector on system 1-2 should not have been used for quantitation, but used only to confirm the presence of the BTEX compounds.

C.3 All other QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC10-S04 and BTR-AOC10-S06 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

G.3 Samples BTR-SS14-S03 and BTR-SS14-S06 were also utilized for field replicate analysis. The detected results of the field replicate analyses reported by the laboratory for toluene, tetrachloroethene, ethylbenzene, and total xylene exceeded the QC criteria. It is the opinion of the reviewer that the large variability in the detected results is due to hydrocarbon interference in the samples which prevented accurate quantitation of the target analytes.

H. Surrogate Recoveries:

H.1 Several of the surrogate recoveries could not be calculated using the FID detector because of hydrocarbon interference. The laboratory used the ECD detector to calculate the surrogate recoveries of samples exhibiting interference on the FID detector. However, the ECD response for the Surrogate (BFB) was saturated for all of the samples. Listed below are the samples that exhibited hydrocarbon interference.

<u>ICF Sample No.</u>	<u>Laboratory Recovery</u>
BTR-SS14-S02	103
BTR-SS14-S03	96
BTR-SS14-S04	97
BTR-SS14-S06	94
BTR-SS14-SD01	103
BTR-AOC10-SD01	100
BTR-AOC10-S01	100

H.2 All other surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-LF12-S03 was used for the soil matrix spike/matrix spike duplicate analyses, and sample number BTR-AOC14-SW01 was used for the water matrix spike/matrix spike duplicate analyses. Neither of these samples were included on chain of custody record No. 390.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The laboratory did not perform any instrument blanks between several of the samples which contained high levels of gasoline. It is the opinion of the reviewer that this resulted in carryover in some of the samples, and created interference and an elevated baseline in some of the samples.

J.2 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 Because of the high level of gasoline in sample BTR-SS14-SD01, the laboratory analyzed this sample at a 1:10 dilution. The detected results and PQLs have been adjusted accordingly to compensate for the dilution.

K.2 The high level of hydrocarbons in some of the samples and the resulting carryover to subsequent samples resulted in quantitation interference of the target analytes using the FID detector. In addition, the saturation problems with the ECD and baseline problems with the PID rendered these two detectors useless for quantitation. Therefore, it is the opinion of the reviewer that although certain analytes are probably present in the samples, the detected results and the PQLs of the HVOC and BTEX target analytes in samples BTR-SS14-S02, BTR-SS14-S03, BTR-SS14-S04, BTR-SS14-S06, BTR-AOC10-SD01, and BTR-AOC10-S01 are qualified "R" as rejected and are unusable.

K.3 Hydrocarbon carryover in some of the samples created interference with the detection of certain analytes at low levels. Therefore, the PQL of select BTEX analytes in samples BTR-AOC10-S02, BTR-AOC10-S03, BTR-AOC10-S04, BTR-AOC10-S05, and BTR-AOC10-S06 have been increased to compensate for the level of interference.

K.4 Discrepancies exist between the detected results reported by the laboratory and the results regenerated by the reviewer for sample BTR-SS14-SD01. Listed below are the target analyte results where discrepancies exist. Results are reported in parts per million (ppm).

<u>Target Analyte</u>	<u>Laboratory Result</u>	<u>Validation Result</u>
ethylbenzene	6.0	11
total xylene	2.6	47

The laboratory indicated that the discrepancies are probably due to inconsistent quantitation procedures. The laboratory was unable to reproduce some of the reported detected results which indicates that inconsistent quantitation procedures may have been used.

K.5 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Due to large percent RSDs in the initial calibration, select data in some samples are qualified "J" as estimated and usable for limited purposes.

L.2 Due to performance problems with the ECD and PID on system 1-2, in addition to hydrocarbon interference, select data in some samples are qualified "R" as rejected and are unusable.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: HVOCs by USEPA Method 8010 and BTEX compounds by USEPA Method 8020
MATRIX: Water and Soil
DATE: April 7, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 5 soil and 3 water samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 389). Three of the samples required analysis for halogenated volatile organic compounds (HVOCs) and all of the samples required analysis for the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed on August 24, 1993 for HVOCs by USEPA Method 8010, and BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC14-SW01	398	Water
BTR-AOC14-S02	400	Soil
BTR-AOC14-S01	402	Soil
BTR-AOC14-SW02	406	Water
BTR-AOC14-SW03	410	Water
BTR-LF12-S02	412	Soil
BTR-LF12-S03	414	Soil
BTR-LF12-S01	416	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-AOC14-SW02 and BTR-AOC14-SW03 were designated as field duplicates.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for HVOCs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a five point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
ethylbenzene	23.2 %
m & p-xylene	22.6 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 3-4 are qualified "J" as estimated and are usable for limited purposes.

B.3 The laboratory was unable to demonstrate linearity throughout the quantitation range using the ECD detector because the detector was saturated at low concentrations. It is the opinion of the reviewer that the ECD detector can be used only to confirm the presence of the halogenated compounds. Quantitation of the halogenated compounds should have been done on the PID or FID detector when possible, and only if compound detection was confirmed on the ECD.

C. Continuing Calibrations:

C.1 The percent recovery for tetrachloroethene (66%) and benzene (67%) in the continuing calibration performed on system 1-2 on August 24, 1993 exceeded the QC criteria of 75-125%. The detected results and the practical quantitation limits (PQLs) for tetrachloroethene and benzene in all of the samples and blanks analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

C.2 The continuing calibrations were performed at a concentration of 100 ppb. At this concentration, the ECD response for all of the halogenated compounds is saturated. Therefore, the ECD detector should only be used to confirm the presence of the halogenated compounds.

C.3 All other QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Duplicate Analysis:

G.1 A QC limit for precision of $\leq 20\%$, as measured by Relative Percent Difference (RPD) between water sample values, was specified for field duplicate comparability.

G.2 Samples BTR-AOC14-SW02 and BTR-AOC14-SW03 were utilized for field duplicate analysis. The results of the field duplicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 All of the surrogate recoveries met applicable QC criteria and the results are

considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-LF12-S03 was used for the soil matrix spike/matrix spike duplicate analyses, and sample number BTR-AOC14-SW01 was used for the water matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 It is the opinion of the reviewer that the ECD detector cannot be used for the quantitation of the halogenated compounds because the detector displayed saturation at low concentrations. The ECD detector can be used for halogenated compound identification confirmation.

J.2 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 No problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 There were no target analytes detected above the PQLs in any of the project samples.

L.2 Due to the high percent recovery for tetrachloroethene and benzene in the continuing calibration performed on system 1-2 on August 24, 1993, the PQLs for these compounds in all of the samples analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: HVOCs by USEPA Method 8010 and BTEX compounds by USEPA Method 8020
MATRIX: Water and Soil
DATE: May 3, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 12 soil samples and 1 water sample from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 387). Four of the samples required analysis for the BTEX compounds, and four of the samples required analysis for halogenated volatile organic compounds (HVOCs) and the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed on August 24 through August 28, 1993 for HVOCs by USEPA Method 8010, and BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC15-S01	364	Soil
BTR-AOC15-S02	366	Soil
BTR-AOC15-S03	369	Soil
BTR-TB-05	375	Water
BTR-AOC14-SD01	378	Soil
BTR-AOC14-S04	380	Soil
BTR-AOC14-SD02	382	Soil
BTR-AOC14-S03	386	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-AOC14-S03 and BTR-AOC14-S04 were designated as field replicates, and sample number BTR-TB-05 was designated as a travel blank.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for HVOCs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 3-4 on August 24, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
ethylbenzene	23.2 %
m & p-xylene	22.6 %

Due to the large percent RSDs, the detected results for these compounds in all project samples are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample number BTR-TB-05 was designated as a travel blank.

F.2 No target analytes were detected in the travel blank at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC14-S03 and BTR-AOC14-S04 were utilized for field replicate analysis. The results of the field replicate analyses, as reported by the laboratory, met all applicable QC criteria and the results are considered acceptable. However, because of poor copy quality on the raw data quantitation reports and chromatograms for these two samples, the reported results could not be verified by the reviewer.

H. Surrogate Recoveries:

H.1 Because of poor copy quality on the raw data quantitation reports and chromatograms, the surrogate recovery in samples BTR-AOC15-S01 and BTR-AOC14-SD02 could not be verified by the reviewer.

H.2 All other surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-AOC14-SW01 was used for the water matrix spike/matrix spike duplicate analyses. The laboratory did not submit any soil matrix spike/matrix spike duplicate analyses. Sample number BTR-AOC14-SW01 was not included on chain of custody record No. 387.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The laboratory did not perform any instrument blanks between several of the samples which contained high levels of gasoline. It is the opinion of the reviewer that this resulted in carryover and created interference causing an elevated baseline in some of the samples.

J.2 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 Because of poor copy quality of the raw data for sample numbers BTR-AOC14-S01, BTR-AOC14-S03, BTR-AOC15-S01, and BTR-AOC14-SD02, the quantitation of these samples could not be verified by the reviewer. The laboratory

did not respond to several requests to resubmit the raw data. Therefore, the PQLs for these samples are qualified "R" as rejected and are unusable.

K.2 The laboratory reported a detected result for tetrachloroethylene in sample number BTR-AOC15-S02 at a concentration of 7.3 ppm. The data from the ECD detector does not support a detected result for this compound, however, the data does support a detected result of 7.3 ppm for toluene. The laboratory reported that toluene was not detected at a concentration above the PQL. It appears that the laboratory transcribed the data incorrectly and meant to report a detected result for toluene at a concentration of 7.3 ppm. The data summary form has been corrected by the reviewer.

K.3 The laboratory did not submit the data from the PID detector for sample number BTR-AOC15-S02. The laboratory did not respond to several requests to resubmit the data. The reviewer was unable to confirm the presence and quantitation of the reported detected results for certain analytes, therefore, the detected results in this sample are qualified "N" and are usable for limited purposes.

K.4 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Due to unreadable raw data for sample numbers BTR-AOC14-S02, BTR-AOC14-S03, BTR-AOC15-S01, and BTR-AOC14-SD02, the PQLs for these samples are qualified "R" as rejected and are unusable.

L.2 Due to missing data from the PID detector for sample number BTR-AOC15-S02, the detected results for select analytes are qualified "N" and are usable for limited purposes.

L.3 Due to large percent RSDs in the initial calibration, select data in some samples are qualified "J" as estimated and usable for limited purposes.

L.4 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: HVOCs by USEPA Method 8010 and BTEX compounds by USEPA Method 8020
MATRIX: Soil
DATE: April 21, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 5 soil samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 475) to analyze for halogenated volatile organic compounds (HVOCs) and BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed on September 7, 1993 for HVOCs by USEPA Method 8010, and BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF03-2SD09	1678	Soil
BTR-LF03-2SD10	1680	Soil
BTR-AOC1-2S06	1682	Soil
BTR-AOC1-2S07	1684	Soil
BTR-AOC1-2S08	1686	Soil

The laboratory incorrectly listed the ICF site numbers for samples 1682, 1684, and 1686 on the data summary sheets as BTR-AOC1-2S06. The ICF site numbers have been corrected by the reviewer.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional

Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for HVOCs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a four point initial calibration on system 3-4 on August 29, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
toluene	26 %
ethylbenzene	53 %
m & p-xylene	41 %
o-xylene	28 %

Due to the large percent RSDs, the detected results for these compounds are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory inadvertently did not include the target analytes in the continuing calibrations associated with this project sample set. However, the laboratory did perform spiked blank analyses during the analytical sequence which can be used as continuing calibration checks. The spiked blank analyses were performed at a concentration of 100 ppb.

C.2 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

- D. Laboratory Blanks:
D.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limits (PQLs) and the results are considered acceptable.
- E. Instrument Blanks:
E.1 No target analytes were detected in the instrument blanks at a concentration above the PQLs and the results are considered acceptable.
- F. Field Blanks:
F.1 There were no field blanks associated with this project sample set.
- G. Field Replicate Analysis:
G.1 There were no field replicate samples associated with this project sample set.
- H. Surrogate Recoveries:
H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.
- I. Matrix Spike/Matrix Spike Duplicate Analyses:
I.1 Sample BTR-SS14-2S06-3 was used as the QC sample for the matrix spike/matrix spike duplicate analyses. This sample was not submitted on chain of custody record No. 475.

I.2 Carbon tetrachloride exhibited a low recovery in the matrix spike analysis (57%) and in the matrix spike duplicate analysis (62%), and benzene exhibited a low recovery in the matrix spike analysis. The analytical results are not qualified solely on the results of the matrix spike analyses.

I.3 All other matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.
- J. System Performance:
J.1 The continuing calibrations were unusable because the laboratory inadvertently did not spike the target analytes into the continuing calibration solution vials. The reviewer was able to check the system response and linearity using the spiked blank analyses.

J.2 No other problems with system performance were observed for all other project sample analyses.
- K. Quantitation and Identification:
K.1 No problems were observed with compound quantitation and identification.

K.2 Compound identification was confirmed using a second column and an alternate detector.

L. Conclusion:

L.1 Due to the high percent RSDs in the initial calibration for certain analytes, select data are considered estimated and usable for limited purposes.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: HVOCs by USEPA Method 8010 and BTEX compounds by USEPA Method 8020
MATRIX: Water and Soil
DATE: April 19, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 12 soil and 3 water samples from the Barter Island site on September 3, 1993 (referenced chain of custody record No. 478). All of the samples required analysis for the BTEX compounds, and six of the samples required analysis for halogenated volatile organic compounds (HVOCs) by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The laboratory analyzed all of the samples for HVOCs by USEPA Method 8010 and the BTEX compounds by USEPA Method 8020 on September 7 and September 8, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-EB-07	1716	Water
BTR-EB-08	1720	Water
BTR-SS13-2S05	1724	Soil
BTR-SS13-2S06	1726	Soil
BTR-SS13-2S07	1728	Soil
BTR-SD08-2S11	1730	Soil
BTR-SD08-2S12	1732	Soil
BTR-SD08-2S13-4	1734	Soil
BTR-SD08-2S14-4	1736	Soil
BTR-SD08-2S15-5	1738	Soil
BTR-SD08-2S16-1	1740	Soil
BTR-LF04-2SW03	1748	Water

BTR-LF04-2SD04	1744	Soil
BTR-LF04-2SD03	1742	Soil
BTR-BKGD-2SD03	1746	Soil

The following QC sample designations were included in project documentation: sample numbers BTR-SD08-2S11 and BTR-SD08-2S12 were designated as field replicates, sample numbers BTR-SD08-2S13-4 and BTR-SD08-2S14-4 were designated as field replicates, and sample numbers BTR-EB-07 and BTR-EB-08 were designated as equipment blanks.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for soils were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for HVOCs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory was unable to demonstrate linearity throughout the quantitation range using the ECD detector because the detector was saturated at low

concentrations. It is the opinion of the reviewer that the ECD detector can be used only to confirm the presence of the halogenated compounds. Quantitation of the halogenated compounds should have been done on the PID or FID detector when possible, and only if compound detection was confirmed on the ECD.

C. Continuing Calibrations:

C.1 The continuing calibrations were performed at a concentration of 500 ppb. At this concentration, the ECD response for all of the halogenated compounds is saturated. Therefore, the ECD detector should only be used to confirm the presence of the halogenated compounds.

C.2 All other QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample numbers BTR-EB-07 and BTR-EB-08 were designated as equipment blanks.

F.2 Toluene was detected in equipment blanks BTR-EB-07 and BTR-EB-08 at concentrations of 2 ppb and 1 ppb, respectively. It is the opinion of the laboratory and the reviewer that the detected results for toluene in these two samples are the result of carryover from a sample analyzed immediately prior to these equipment blanks. Therefore, the detected results for toluene in these two samples have been changed to reflect that toluene was not detected at a concentration above the PQL.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-SD08-2S11 and BTR-SD08-2S12 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

G.3 Samples BTR-SD08-2S13-4 and BTR-SD08-2S14-4 were also utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-AOC9-2S12-1.5 was used for the matrix spike/matrix spike duplicate analyses.

I.2 A discrepancy exists between the amount of carbon tetrachloride reported by the laboratory and the amount calculated by the reviewer in the spike analyses. The reviewer calculated recoveries of 187% and 149% in the matrix spike and matrix spike duplicate analyses, respectively. It appears that the laboratory used an incorrect linear regression equation for compound quantitation. The high recoveries are not expected to have an affect on the data since this target compound was not detected in any of the samples.

I.3 All of the other matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The detection of toluene in the equipment blanks is probably the result of carryover from a sample analyzed immediately prior to the equipment blanks. The laboratory should have analyzed an instrument blank after the high level sample to prevent carryover to subsequent samples.

J.2 It is the opinion of the reviewer that the ECD detector cannot be used for the quantitation of the halogenated compounds because the detector displayed saturation at low concentrations. The ECD detector can be used for halogenated compound identification confirmation. Therefore, the detected results and PQLs of the HVOCs in all project samples are qualified "J" as estimated and are usable for limited purposes.

J.3 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 Compound identification was confirmed using a second column and an alternate detector.

K.2 No problems were observed for compound quantitation and identification.

L. Conclusion:

L.1 Due to the high percent RSDs in the initial calibration for certain analytes, select data are considered estimated and usable for limited purposes.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: HVOCs by USEPA Method 8010 and BTEX compounds by USEPA Method 8020
MATRIX: Water and Soil
DATE: April 26, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 10 soil and 2 water samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 476). All of the samples required analysis for the halogenated volatile organic compounds (HVOCs) and the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed on September 6 and September 7, 1993 for HVOCs by USEPA Method 8010, and BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-EB-06	1690	Water
BTR-AOC15-2S04	1692	Soil
BTR-AOC15-2S05	1694	Soil
BTR-AOC10-2SD02	1696	Soil
BTR-AOC10-2S06-1.5	1698	Soil
BTR-AOC10-2S07	1700	Soil
BTR-AOC10-S208	1702	Soil
BTR-AOC10-2S09	1704	Soil
BTR-SS14-2S05	1706	Soil
BTR-SS14-2S06-3	1708	Soil
BTR-SS14-2S07	1710	Soil
BTR-AB-03	1712	Water

The following QC sample designations were included in project documentation: sample numbers BTR-AOC10-2S08 and BTR-AOC10-2S09 were designated as field replicates, sample number BTR-EB-06 was designated as an equipment blank, and sample number BTR-AB-03 was designated as an ambient blank.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for HVOCs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a four point initial calibration on system 3-4 on August 29, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID

detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
toluene	26 %
ethylbenzene	53 %
m & p-xylene	41 %
o-xylene	28 %

Due to the large percent RSDs, the detected results for these compounds are qualified "J" as estimated and are usable for limited purposes.

C. Continuing Calibrations:

C.1 The laboratory inadvertently did not include the target analytes in the continuing calibrations associated with this project sample set. However, the laboratory did perform spiked blank analyses during the analytical sequence which can be used as continuing calibration checks. The spiked blank analyses were performed at a concentration of 100 ppb.

C.2 All QC criteria for the spike blanks used as continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample number BTR-EB-06 was designated as an equipment blank and sample number BTR-AB-03 was designated as an ambient blank.

F.2 Toluene, ethylbenzene, and xylene were detected in the equipment blank at low concentrations. It is the opinion of the laboratory and the reviewer that the detected results for these analytes in the equipment blank are the result of carryover. Therefore, the PQLS for these analytes have been raised by the reviewer and are qualified "J" as estimated and usable for limited purposes.

F.3 Toluene, ethylbenzene, xylene, and carbon tetrachloride were detected in the ambient blank at low concentrations. It is the opinion of the laboratory and the reviewer that the detected results for these analytes in the ambient blank are the result of carryover. Therefore, the PQLS for these analytes have been raised by the reviewer and are qualified "J" as estimated and usable for limited purposes.

G. Field Replicate Analysis:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC10-2S08 and BTR-AOC10-2S09 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 All of the surrogate QC recovery criteria were met and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-SS14-2S06-3 was used for the soil matrix spike/matrix spike duplicate analyses, and tap water was used for the water matrix spike/matrix spike duplicate analyses. Neither of these samples were included on chain of custody record No. 476.

I.2 For the soil matrix, carbon tetrachloride exhibited a low recovery in the matrix spike analysis (57%) and in the matrix spike duplicate analysis (62%), and benzene exhibited a low recovery in the matrix spike analysis. The analytical results are not qualified solely on the results of the matrix spike analyses.

I.3 All other matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The continuing calibrations were unusable because the laboratory inadvertently did not spike the target analytes into the continuing calibration solution vials. The reviewer was able to check the system response and linearity using the spiked blank analyses.

J.2 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 The laboratory reported a detected result for benzene at a concentration of 1.4 ppm in sample number BTR-SS14-2S07. The confirmation detector provides no evidence that this compound is present at this concentration. Since the PID detector does not provide evidence that benzene is present at this concentration, the detected result for this compound in sample BTR-SS14-2S07 is qualified "N" and is usable for limited purposes.

K.2 Compound identification was confirmed using a second column and an alternate detector.

K.3 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Due to the high percent RSDs in the initial calibration for certain analytes, select data are considered estimated and usable for limited purposes.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Keith Strout
ANALYSIS: HVOCs by USEPA Method 8010 and BTEX compounds by USEPA Method 8020
MATRIX: Water and Soil
DATE: April 13, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 6 soil and 3 water samples from the Barter Island site on August 30, 1993 (referenced chain of custody record No. 395). All of the samples required analysis for halogenated volatile organic compounds (HVOCs) and the BTEX compounds by the volatile organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed on September 1 and September 2, 1993 for HVOCs by USEPA Method 8010, and BTEX compounds by USEPA Method 8020.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF04-SW01	1326	Water
BTR-LF04-SW02	1330	Water
BTR-LF04-S02	1334	Soil
BTR-LF04-SD01	1336	Soil
BTR-LF04-SD02	1338	Soil
BTR-LF01-SD01	1340	Soil
BTR-LF01-SD02	1342	Soil
BTR-LF01-SD03	1344	Soil
BTR-TB-04	1346	Water

The following QC sample designations were included in project documentation: sample

number BTR-TB-04 was designated as a travel blank.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared using the guidelines in the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Methods 8010 and 8020, and the Project Sampling and Analysis Plan.

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for HVOCs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by the State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory analyzed a five point initial calibration on system 1-2 on August 19, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
benzene	28.3 %
o-xylene	26.5 %

Due to the large percent RSDs, the detected results for these compounds in all project samples analyzed on system 1-2 are qualified "J" as estimated and are usable for limited purposes.

B.2 The laboratory analyzed a four point initial calibration on system 3-4 on August 29, 1993. The range of the initial calibration was from 1 ppb to 1000 ppb. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using the calibration factors from the initial calibration using the FID detector. The % RSDs for the following compounds exceeded the recommended QC criteria of 20.0%.

<u>Compound</u>	<u>% RSD</u>
toluene	26 %
ethylbenzene	53 %
m & p-xylene	41 %
o-xylene	28 %

Due to large percent RSDs, the detected results for these compounds in all samples analyzed on system 3-4 are qualified "J" as estimated and usable for limited purposes.

B.3 The laboratory was unable to demonstrate linearity throughout the quantitation range using the ECD detector because the detector was saturated at low concentrations. It is the opinion of the reviewer that the ECD detector can be used only to confirm the presence of the halogenated compounds. Quantitation of the halogenated compounds should have been done on the PID or FID detector when possible, and only if compound detection was confirmed on the ECD.

C. Continuing Calibrations:

C.1 The continuing calibrations were performed at a concentration of 500 ppb. At this concentration, the ECD response for all of the halogenated compounds is saturated. Therefore, the ECD detector should only be used to confirm the presence of the halogenated compounds.

C.2 All other QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 No target analytes were detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 No target analytes were detected in the travel blank at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analysis:

G.1 There were no field replicate samples associated with this project sample set.

H. Surrogate Recoveries:

H.1 A discrepancy exists between the surrogate recovery reported by the laboratory (84%) and the surrogate recovery calculated by the reviewer (104%) for sample number BTR-TB-04. This is not expected to have an affect on the data since the surrogate recovery met all of the applicable QC criteria.

H.2 All of the surrogate recoveries met applicable QC criteria for all other project samples and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 Sample number BTR-AOC09-S09 (1318) was used for the soil matrix spike/matrix spike duplicate analyses. The laboratory did not submit any matrix spike/matrix spike duplicate analyses for the water fraction.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The laboratory did not adjust the HVOC PQLs for moisture content in soil samples BTR-LF04-S02, BTR-LF04-SD01, and BTR-LF04-SD02. The HVOC PQLs for these samples have been adjusted on the data summary forms by the reviewer.

J.2 It is the opinion of the reviewer that the ECD detector cannot be used for the quantitation of the halogenated compounds because the detector displayed saturation at low concentrations. The ECD detector can be used for halogenated compound identification confirmation. Therefore, the detected results and PQLs of the HVOCs in all project samples are qualified "J" as estimated and are usable for limited purposes.

J.3 No other problems with system performance were observed for the project samples.

K. Quantitation and Identification:

K.1 The laboratory reported a detected result for total xylene in sample BTR-LF01-SD01. The confirmation data does not support the presence of this analyte in the sample. Therefore, the detected result for total xylene in sample BTR-LF01-SD01 has been changed on the data summary form by the reviewer to reflect that this analyte was not detected at a concentration above the PQL.

K.2 No other problems were observed with compound quantitation and identification.

L. Conclusion:

L.1 Due to the previously mentioned problems with the initial calibrations and the continuing calibrations, select data has been qualified "J" as estimated and usable for limited purposes.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Pesticides by USEPA Method 8080
MATRIX: Water and Soil
DATE: April 14, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 1 water and 13 soil samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 390). 1 water and 3 soil samples were requested for pesticide analysis by the pesticide organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for pesticides by USEPA Method 8080 on August 24 and 25, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SS14-SW01	333	Water
BTR-SS14-S01	339	Soil
BTR-AOC10-S01	353	Soil
BTR-AOC10-S04	359	Soil

The analytical results for the soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 0.01 ppm to 1.0 ppm. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using calibration factors determined from the initial calibration using the ECD detector. The %RSDs for the following target analytes exceeded the recommended QC criteria of 20.0%

<u>Compound</u>	<u>%RSD</u>
Endosulfan II	37.9%
Endrin Aldehyde	30.6%
DDT/Endosulfan Sulfate	32.0%
Endrin Ketone	32.6%

Due to the large percent RSDs, the detected results for these compounds are qualified "J" as estimated and are usable for limited purposes.

B.2 Methoxychlor was spiked in at concentrations too low to be detected by the ECD detector until the 0.5 ppm initial calibration standard. All detected results for this analyte are qualified "R" as rejected and unusable, and the practical quantitation limit (PQL) was raised accordingly for both the water and soil samples.

C. Continuing Calibration:

C.1 No continuing calibrations were analyzed during the sequence with the exception of the column degradation check solution containing Endrin and DDT. The stability of the instrument, GC column, and detector were monitored using the Endrin and DDT column degradation check solution and the Aroclor 1254 continuing calibration solution. These two solutions were used to check area consistency and surrogate area stability. It is the opinion of the reviewer, that since no pesticide continuing calibration solutions were analyzed, this is the only criteria that can be used to monitor system performance.

C.2 Due to the absence of pesticide continuing calibrations, the PQLs for the blank and samples are qualified "J" as estimated and usable for limited purposes.

D. Laboratory Blanks:

D.1 Target analytes were not detected in the method blanks at a concentration above the PQLs and the results are considered acceptable.

- E. Instrument Blanks:
E.1 Target analytes were not detected in the instrument blanks at a concentration above the PQLs and the results are considered acceptable.
- F. Field Blanks:
F.1 There were no field blanks submitted for analyses with this project sample set.
- G. Field Replicate Analyses:
G.1 There were no field replicate samples submitted for analysis with this project sample set for the pesticide fraction.
- H. Surrogate Recoveries:
H.1 The surrogate recoveries calculated from the Aroclor 1254 continuing calibration met all QC criteria.
- I. Matrix Spike/Matrix Spike Duplicate:
I.1 No matrix spike and matrix spike duplicate analyses were performed for this project sample set.
- J. System Performance:
J.1 The laboratory set up the GC analytical run time on the primary GC column to elute all pesticide analytes within 9 minutes, causing co-elution of numerous pesticides, and making identification difficult. A slower temperature program and/or slower carrier gas flow rate would increase resolution for many of the pesticide analytes.
J.2 The Endrin and 4,4'-DDT breakdown ranged between 12-30%, and the results are considered acceptable.
J.3 No other problems with system performance were observed for all other project sample analyses.
- K. Quantitation and Identification:
K.1 Due to sensitivity problems with methoxychlor in the initial calibration, the PQL was raised by the reviewer to 0.5 ppm for this analyte in the soil samples and 50 ppb for the water sample.
K.2 No other problems with compound quantitation and identification were observed.
- L. Conclusion:
L.1 No target analytes were detected in the method blanks or the samples at a concentration above the PQLs.
L.2 Due to the absence of a pesticide continuing calibration, all PQLs for the method blanks and samples are qualified "J" as estimated and usable for limited

purposes.

L.3 Due to low sensitivity and hydrocarbon interference detected in the initial calibration, the PQL for methoxychlor in the method blank and samples was raised to <0.5 ppm for the soil samples and <50 ppb for the water sample.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Pesticides by USEPA Method 8080
MATRIX: Water and Soil
DATE: April 21, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 4 soil and 5 water samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 392). Two water samples were requested for pesticide analysis by the pesticide organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for pesticides by USEPA Method 8080 on August 25, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC10-SW01	304	Water
BTR-EB-05	328	Water

It should be noted that the laboratory did not report the results for both of the water samples on the summary result page. The laboratory stated they were not reported due to extraction and/or instrument problems. By reviewing the data it appears that the samples listed by the laboratory as being not reported were reanalyzed at a later time (evident by the raw data submitted). The laboratory reported results for soil samples BTR-AOC07-S01, BTR-LF01-S01 and BTR-LF04-S01 which were not requested for on the chain-of-custody record. These three soil samples were not validated by the reviewer.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 0.01 ppm to 1.0 ppm. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using calibration factors determined from the initial calibration using the ECD detector. The %RSDs for the following target analytes exceeded the recommended QC criteria of 20.0%

<u>Compound</u>	<u>%RSD</u>
Endosulfan II	37.9%
Endrin Aldehyde	30.6%
DDT/Endosulfan Sulfate	32.0%
Endrin Ketone	32.6%

Due to the large percent RSDs, the detected results for these compounds are qualified "J" as estimated and are usable for limited purposes.

B.2 Methoxychlor was spiked in at concentrations too low to be detected by the ECD detector until the 0.5 ppm initial calibration standard. All detected results for this analyte are qualified "R" as rejected and unusable, and the practical quantitation limit (PQL) was raised accordingly for the samples.

C. Continuing Calibration:

C.1 No continuing calibrations were analyzed during the sequence with the exception of the column degradation check solution containing Endrin and DDT. The stability of the instrument, GC column, and detector were monitored using the Endrin and DDT column degradation check solution and the Aroclor 1254 continuing calibration solution. These two solutions were used to check area consistency and surrogate area stability. It is the opinion of the reviewer, that since no pesticide continuing calibration solutions were analyzed, this is the only criteria that can be used to monitor system performance.

C.2 Due to the absence of pesticide continuing calibrations, the PQLs for the blank and samples are qualified "J" as estimated and usable for limited purposes.

C.3 The laboratory analyzed many of the pesticide analytes separately prior to

analyzing the two samples listed above. These chromatograms are included in the data package for reference information only.

D. Laboratory Blanks:

D.1 Target analytes were not detected in the method blank at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 Target analytes were not detected in the instrument blank at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample BTR-EB-05 was designated as the field equipment blank for this project sample set.

F.2 Target analytes were not detected in the equipment blank at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analyses:

G.1 There were no field replicate samples for the pesticide fraction associated with this project sample set.

H. Surrogate Recoveries:

H.1 All surrogate recoveries calculated from the Aroclor 1254 continuing calibration standard met all QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 No matrix spike and matrix spike duplicate analyses for the pesticide fraction were performed for this project sample set.

J. System Performance:

J.1 The laboratory set up the GC analytical run time on the primary GC column to elute all pesticide analytes within 9 minutes, causing co-elution of numerous pesticides, and making identification difficult. A slower temperature program and/or slower carrier gas flow rate would increase resolution for many of the pesticide analytes.

J.2 The Endrin and 4,4'-DDT breakdown ranged between 22-24%, and the results are considered acceptable.

J.3 No other problems with system performance were observed for all other project sample analyses.

K. Quantitation and Identification:

K.1 Due to sensitivity problems with methoxychlor in the initial calibration, the PQL was raised by the reviewer to 25 ppb in the method blank and samples. The PQL for all other target analytes are 2.5 ppb.

K.2 The laboratory did not report the two water sample results on the summary results page. The reviewer calculated the results and are listed below.

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-AOC10-SW01	---	<2.5 ppb *
BTR-EB-05	---	<2.5 ppb *

* Methoxychlor PQL is 25 ppb for both samples due to sensitivity problems associated with the initial calibration.

K.3 The laboratory reported the results for soil samples BTR-AOC07-S01, BTR-LF01-S01 and BTR-LF04-S01 on the summary results page. These three soil samples were not validated by the reviewer.

K.4 No other problems with compound quantitation and identification were observed.

L. Conclusion:

L.1 No target analytes were detected in the method blank or the samples at a concentration above the PQL.

L.2 Due to the absence of a pesticide continuing calibration, all PQLs for the method blank and samples are qualified "J" as estimated and usable for limited purposes.

L.3 Due to low sensitivity detected in the initial calibration, the PQL for methoxychlor in the method blank and the samples was raised to 25 ppb.

L.4 The laboratory did not report the results for the water samples on the summary results page. The reviewer calculated the results and are reported in Section K.2.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF12-S01	416	Soil

The analytical results were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 0.01 ppm to 1.0 ppm. All samples were quantitated using a linear regression curve calculated from the initial calibration. Percent relative standard deviations (%RSDs) were calculated for all compounds using calibration factors determined from the initial calibration using the EC detector. The %RSDs for the following target analytes exceeded the recommended QC criteria of 20.0%

<u>Compound</u>	<u>%RSD</u>
Endosulfan II	38%
Endrin Aldehyde	31%
DDT/Endo. Sulfate	32%

Due to the large percent RSDs, the detected results for these compounds are qualified "J" as estimated and are usable for limited purposes.

B.2 Methoxychlor was spiked in at concentrations too low to be detected by the ECD except for the 0.5 ppm initial calibration. All detected results for this analyte are qualified "R" as rejected and unusable, and the practical quantitation limit (PQL) is raised to <0.5 ppm.

C. Continuing Calibration:

C.1 No continuing calibrations were analyzed during the sequence with the exception of the column degradation solution containing Endrin and DDT. The stability of the instrument, GC column, and detector were monitored using the Endrin and DDT column degradation solution and the Aroclor 1254 continuing calibration solution. These two solutions were used to check area consistency and surrogate area stability. It is the opinion of the reviewer, that since no pesticide continuing calibration solutions were analyzed, this is the only criteria that can be used to monitor system performance.

C.2 Due to the absence of pesticide continuing calibrations, the PQLs for the blank and sample are qualified "J" as estimated and usable for limited purposes.

D. Laboratory Blanks:

D.1 Target analytes were not detected in the method blank at a concentration above the PQLs and the results are considered acceptable.

E. Instrument Blanks:

E.1 Target analytes were not detected in the instrument blank at a concentration above the PQLs and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analyses with this project sample set.

- G. Field Duplicate Analyses:
G.1 No field duplicate analyses were requested for the pesticide fraction.
- H. Surrogate Recoveries:
H.1 The surrogate recovery calculated from the Aroclor 1254 continuing calibration met all QC criteria.
- I. Matrix Spike/Matrix Spike Duplicate:
I.1 No matrix spike and matrix spike duplicate analyses were performed for this project sample set.
- J. System Performance:
J.1 The laboratory set up the GC analytical run time on the primary GC column to elute all pesticide analytes within 9 minutes, causing co-elution of numerous pesticides, and making identification difficult. A slower temperature program and/or slower carrier gas flow rate would increase resolution for many of the pesticide analytes.

J.2 The Endrin and 4,4'-DDT breakdown ranged between 5-20%, and the results are considered acceptable.

J.3 No other problems with system performance were observed for all other project sample analyses.
- K. Quantitation and Identification:
K.1 Due to sensitivity problems with methoxychlor in the initial calibration, the PQL is raised to 0.5 ppm for this analyte.

K.2 No other problems with compound quantitation and identification were observed.
- L. Conclusion:
L.1 No target analytes were detected in the method blank and the sample.

L.2 Due to the absence of a pesticide continuing calibration, all PQLs for the method blank and sample are qualified "J" as estimated and usable for limited purposes.

L.3 Due to low sensitivity and hydrocarbon interference detected in the initial calibration, the PQL for methoxychlor in the method blank and samples is raised to <0.5 ppm.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Polychlorinated Biphenyls (PCBs) by USEPA Method 8080.
MATRIX: Water
DATE: April 26, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 10 soil and 2 water samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 476). One water sample was requested for polychlorinated biphenyls (PCBs) analysis by the PCB organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The sample was analyzed for PCBs by USEPA Method 8080 (GC/ECD) on September 9, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-EB-06	1688	Water

The following set of QC sample designations were included in project documentation: sample number BTR-EB-06 was designated as an equipment blank.

The quantitation limits reported by the laboratory (<2 ppm) for the water sample was lower than those specified in the Project Sampling and Analysis Plan (<5 ppm). Since the low point of the initial calibration is 0.1 ppm, the PQL should be 5 ppb. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC Instrument ICF5 on August 21, 1993. All samples were quantitated using a linear regression curve calculated from the initial calibration. The range of the initial calibration was from 0.1 ppm to 10 ppm. A percent relative standard deviation (%RSD) of 37.2% was calculated using calibration factors determined from the initial calibration. The %RSD of 37.2 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 PCBs were not detected in the method blank at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 PCBs were not detected in the instrument blank at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Sample number BTR-EB-06 was designated as an equipment blank.

F.2 Diesel was not detected in the equipment blank at a concentration above the PQL and the results are considered acceptable.

G. Field Replicate Analyses:

G.1 No field replicate samples were associated with this project sample set.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 No matrix spike and matrix spike duplicate analyses were performed for this sample set.

J. System Performance:

J.1 No problems with system performance were observed for the project sample analyses.

- K. Quant itationand Identification:
K.1 No problems with compound quantitation and identification were observed for this project sample set.
- L. Conclusion:
L.1 PCBs were not detected in in the method blank and sample BTR-EB-06.
L.2 The PQLs for the method blank and sample were raised to 5 ppb by the reviewer on the summary results page.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Polychlorinated Biphenyls (PCBs) by USEPA Method 8080.
MATRIX: Water and Soil
DATE: April 8, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 5 soil and 3 water samples from the Barter Island site on August 21 and 22, 1993 (referenced chain of custody record No. 389). Three samples were requested for polychlorinated biphenyls (PCBs) analysis by the PCB organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for PCBs by USEPA Method 8080 (GC/ECD) on August 24, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF12-S02	412	Soil
BTR-LF12-S03	414	Soil
BTR-LF12-S01	416	Soil

The analytical results were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for PCBs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC instrument ICF6 on August 21, 1994. The range of the initial calibration was from 0.1 ppm to 10 ppm. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 30.3% was calculated using calibration factors determined from the initial calibration. The %RSD of 30.3 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 PCBs were not detected in the method blank at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 PCBs were not detected in the instrument blank at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 No field replicate analyses were requested for the PCB fraction.

H. Surrogate Recoveries:

H.1 All surrogate recoveries were calculated referenced to the closest continuing calibration standard.

H.2 All surrogate recoveries met applicable QC criteria, and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-LF12-S03 was used for the soil matrix spike/matrix spike duplicate analyses.

I.2 The percent recovery of the matrix spike duplicate sample was 252%, exceeding the percent recovery and %RPD QC criteria. It is the opinion of the

reviewer that since the surrogate recovery was also high for this QC sample, the final volume of the sample extract had somehow concentrated to less than 5 mL. Since this is a QC sample, no action is taken.

J. System Performance:

J.1 No problems with system performance were observed for the project sample analyses.

K. Quantitation and Identification:

K.1 No problems with compound quantitation and identification were observed for this project sample set.

L. Conclusion:

L.1 No PCBs were detected in the method blank or the samples.

L.2 The matrix spike duplicate sample exceeded the percent recovery QC criteria. Since this is a QC sample, no action is necessary.

REVIEWER: Timothy Vonnahme
ANALYSIS: Polychlorinated Biphenyls (PCBs) by USEPA Method 8080.
MATRIX: Water and Soil
DATE: April 14, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 1 water and 13 soil samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 390). Eleven soil samples were requested for polychlorinated biphenyls (PCBs) analysis by the PCB organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for PCBs by USEPA Method 8080 (GC/ECD) on August 24 and 25, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SS14-S01	339	Soil
BTR-SS14-S02 (1:10 DIL)	341	Soil
BTR-SS14-S03	343	Soil
BTR-SS14-S04	345	Soil
BTR-SS14-S06	347	Soil
BTR-AOC10-S01	353	Soil
BTR-AOC10-S02	355	Soil
BTR-AOC10-S03	357	Soil
BTR-AOC10-S04	359	Soil
BTR-AOC10-S05	361	Soil
BTR-AOC10-S06	363	Soil

The analytical results were reported with an adjustment for moisture content.

The following two sets of QC sample designations were included in project documentation: sample numbers BTR-SS14-S03 and BTR-SS14-S06 along with sample numbers BTR-AOC10-S04 and BTR-AOC10-S06 were designated as field replicates.

It should be noted that all quantitation limits reported by the laboratory for PCBs for project soil samples were higher than those specified in the Project Sampling and Analysis Plan. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 0.1 ppm to 10 ppm. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 30.3% was calculated using calibration factors determined from the initial calibration. The %RSD of 30.3 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 PCBs were not detected in the method blank at a concentration above the practical quantitation limits (PQLs) and the results are considered acceptable.

E. Instrument Blanks:

E.1 PCBs were not detected in the instrument blanks at a concentration above the PQLs and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 A QC limit for precision of ≤ 50 percent as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate

comparability.

G.2 Samples BTR-SS14-S03 and BTR-SS14-S06 were utilized for field replicate analyses. The results met all applicable QC criteria, and are considered acceptable.

G.3 Samples BTR-AOC10-S04 and BTR-AOC10-S06 were also utilized for field replicate analyses. The results met all applicable QC criteria, and are considered acceptable.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria, and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-LF01-S01 was used for the soil matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for the project sample analyses.

K. Quantitation and Identification:

K.1 The PQLs for sample BTR-SS14-S02 should all have been raised to <5 ppb due to the 10 fold dilution necessary for the diesel fraction. The PQLs have been corrected on the summary result page by the reviewer.

K.2 The PQLs for sample BTR-AOC10-S05 were not corrected for moisture content by the laboratory. The PQLs have been corrected on the summary result page by the reviewer.

K.3 No other problems with compound quantitation and identification were observed for this project sample set.

L. Conclusion:

L.1 No PCBs were detected in the method blank or the samples at a concentration above the PQL and all results are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Polychlorinated Biphenyls (PCBs) by USEPA Method 8080.
MATRIX: Water and Soil
DATE: April 20, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 4 soil and 5 water samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 392). Seven of the samples were requested for polychlorinated biphenyls (PCBs) analysis by the PCB organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for PCBs by USEPA Method 8080 (GC/ECD) on August 25, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-EB-04	308	Water
BTR-AOC10-SW01	304	Water
BTR-AOC07-S01	320	Soil
BTR-AOC07-S02	321	Soil
BTR-LF01-S01	322	Soil
BTR-LF04-S01	326	Soil
BTR-EB-05	328	Water

The analytical results for the soil samples were reported with an adjustment for moisture content.

The following set of QC sample designations were included in project documentation: sample numbers BTR-EB-04 and BTR-EB-05 were designated as field equipment blanks.

The quantitation limits reported by the laboratory (<0.5 ppm) for the soil samples were

higher than those specified in the Project Sampling and Analysis Plan (<0.1 ppm). It is the opinion of the reviewer that the quality of the data was not affected.

It should be noted that the laboratory did not report the results for the three water samples on the summary result page. The laboratory stated they were not reported due to extraction and/or instrument problems. By reviewing the data it appears that the samples listed by the laboratory as being not reported were reanalyzed at a later time (evident by the raw data submitted by the laboratory). However, the reviewer could not locate the raw data for sample BTR-LF01-S01 reported by the laboratory, even though this sample was reported with results for the matrix spike/matrix spike duplicate QC sample.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC instrument ICF6 on August 21, 1994. The range of the initial calibration was from 0.1 ppm to 10 ppm. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 30.3% was calculated using calibration factors determined from the initial calibration. The %RSD of 30.3 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 PCBs were not detected in the method blank at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 PCBs were not detected in the instrument blank at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 Samples BTR-EB-04 and BTR-EB-05 were designated as field equipment blanks for this project sample set.

F.2 No PCBs were detected in the equipment blanks at a concentration above

the PQL and the results are considered acceptable.

G. Field Replicate Analyses:

G.1 No field replicate samples were associated with this project sample set.

H. Surrogate Recoveries:

H.1 The surrogate recovery for sample BTR-AOC07-S01 could not be calculated due to the high level of Aroclor 1254 detected in the sample interfering with the surrogate area. It is unknown how the laboratory reported a surrogate recovery of 120%.

H.2 All other surrogate recoveries, including the samples not reported by the laboratory, met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-LF01-S01 was used for the matrix spike/matrix spike duplicate analyses. No water matrix spike/matrix spike duplicate analyses were submitted.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 The laboratory reported extraction and/or instrument problems with samples BTR-EB-04, BTR-AOC10-SW01 and BTR-EB-05 resulting in non submittal of results by the laboratory.

J.2 No other problems with system performance were observed for the project sample analyses.

K. Quantitation and Identification:

K.1 The laboratory did not report results for samples BTR-EB-04, BTR-AOC10-SW01 and BTR-EB-05 stating that due to extraction and/or instrument problems no quantitative results were possible. However, by going through the data the reviewer found that the laboratory did reanalyze the three water samples noted above (evident by the submitted raw data). Listed below are the samples that were not reported by the laboratory, but were reported by the reviewer.

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-EB-04	---	<5 ppb
BTR-AOC10-SW01	---	<5 ppb
BTR-EB-05	---	<5 ppb

K.2 The reviewer was unable to locate the raw data for sample BTR-LF01-S01, even though this sample was reported with results for the matrix spike/matrix spike duplicate QC sample. Therefore, the PQL for this sample is qualified "R" as rejected and unusable.

K.3 Discrepancies exist between the results reported by the laboratory and the

results regenerated by the reviewer for sample BTR-AOC07-S01. The laboratory reported a PQL of <0.5 ppm for Aroclor 1254, whereas the reviewer calculated Aroclor 1254 at a concentration of 52 ppm, exceeding the linear range of the initial calibration. Therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

K.4 The laboratory adjusted the PQL for Aroclor 1254 only in sample BTR-LF04-S01 to allow for the moisture content, when they should have adjusted the PQLs for all the PCBs. It has been corrected by the reviewer on the summary result page.

K.5 No other problems with compound quantitation and identification were observed for this project sample set.

L. Conclusion:

L.1 Results for sample BTR-LF01-S01 are qualified "R" as rejected and unusable since the reviewer was unable to locate the raw data for verification of sample results.

L.2 Due to a discrepancy between the result reported by the laboratory and the result regenerated by the reviewer, the detected result for sample BTR-AOC07-S01 is qualified "J" as estimated and usable for limited purposes.

L.3 Results for the three water samples were not reported by the laboratory, but were calculated by the reviewer and are reported in Section K.1.

L.4 PCBs were not detected in the other project samples at concentrations above the PQL.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Polychlorinated Biphenyls (PCBs) by USEPA Method 8080.
MATRIX: Soil
DATE: April 19, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 12 soil samples from the Barter Island site on August 22, 1993 (referenced chain of custody record No. 387). Five soil samples were requested for polychlorinated biphenyls (PCBs) analysis by the PCB organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for PCBs by USEPA Method 8080 (GC/ECD) on August 24, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC07-S03	370	Soil
BTR-AOC07-S04	371	Soil
BTR-AOC07-S05	372	Soil
BTR-AOC07-S06	373	Soil
BTR-AOC07-S07	374	Soil

The analytical result for the soil samples were reported with an adjustment for moisture content.

The following two sets of QC sample designations were included in project documentation: sample numbers BTR-AOC07-S06 and BTR-AOC07-S07 along with sample numbers BTR-AOC14-S03 and BTR-AOC14-S04 were designated as field replicates.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This

report was prepared in accordance with the USEPA draft document " National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC instrument ICF6 on August 21, 1993. The range of the initial calibration was from 0.1 ppm to 10 ppm. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 30.3% was calculated using calibration factors determined from the initial calibration. The %RSD of 30.3 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 PCBs were not detected in the method blank at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 PCBs were not detected in the instrument blank at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 A QC limit for precision of ≤ 50 percent as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC07-S06 and BTR-AOC07-S07 were utilized for field replicate analyses. The results met all applicable QC criteria, and are considered acceptable.

H. Surrogate Recoveries:

H.1 The laboratory reported surrogate percent recovery values of 130% for sample BTR-AOC07-S06 and 145% for sample BTR-AOC07-S07. When calculated by the reviewer using peak height in place of area due to interference, the surrogate recoveries were 157% for sample BTR-AOC07-S06 and 156% for sample BTR-AOC07-S07. If the laboratory reintegrated the surrogate areas to achieve the above

surrogate recoveries, they were not submitted with the data for verification by the reviewer.

H.2 All other surrogate recoveries met applicable QC criteria, and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-AOC14-SD02 was used for the matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 Aroclor 1254 was detected in samples BTR-AOC07-S06 and BTR-AOC07-S07 at concentrations above the initial calibration range. The laboratory did not dilute and reanalyze the samples.

J.2 No other problems with system performance were observed for the project sample analyses.

K. Quantitation and Identification:

K.1 All samples were quantitated using the closest continuing calibration standard (File 098R0201).

K.2 Discrepancies exist between the detected results reported by the laboratory and the results regenerated by the reviewer for some of the project samples. Listed below are the sample results where discrepancies exist.

<u>ICF Site No.</u>	<u>Laboratory Results</u>	<u>Validation Results</u>
BTR-AOC07-S06	21 ppm	20 ppm
BTR-AOC07-S07	20 ppm	30 ppm

It is the opinion of the reviewer that the discrepancies are probably due to inconsistent quantitation procedures. The laboratory was unable to reproduce some of the reported detected results for diesel which indicates that inconsistent quantitation procedures may have been used.

K.3 Samples BTR-AOC07-S06 and BTR-AOC07-S07 contained Aroclor 1254 at concentrations exceeding the linear range of the initial calibration. Since the laboratory failed to dilute and reanalyze these two samples, the detected results are qualified "J" as estimated and usable for limited purposes.

K.4 The laboratory confirmed the Aroclor 1254 in sample BTR-AOC07-S07 with a second analysis using the GC confirmation column.

K.5 No other problems with compound quantitation and identification were observed for this project sample set.

L. Conclusion:

L.1 Due to previously mentioned problems stated above, the detected results for samples BTR-AOC07-S06 and BTR-AOC07-S07 are qualified "J" as estimated and usable for limited purposes.

L.2 PCBs were not detected in the other project soil samples at concentrations above the PQL.

ANALYSIS: Polychlorinated Biphenyls (PCBs) by USEPA Method 8080.
MATRIX: Soil
DATE: April 26, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 6 soil and 6 water samples from the Barter Island site on September 2, 1993 (referenced chain of custody record No. 474). Six soil samples were requested for polychlorinated biphenyls (PCBs) analysis by the PCB organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for PCBs by USEPA Method 8080 (GC/ECD) on September 6, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-AOC7-2S08-1	1671	Soil
BTR-AOC7-2S09	1672	Soil
BTR-AOC7-2S10	1673	Soil
BTR-AOC7-2S11	1674	Soil
BTR-AOC7-2S12	1675	Soil
BTR-AOC7-2S13	1676	Soil

The analytical results for the soil samples were reported with an adjustment for moisture content.

The following set of QC sample designations were included in project documentation: sample numbers BTR-AOC7-2S10 and BTR-AOC7-2S11 were designated as field replicate samples.

The quantitation limits reported by the laboratory (<0.5 ppm) for the soil samples were higher than those specified in the Project Sampling and Analysis Plan (<0.1 ppm). It is the

opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC Instrument ICF5 on August 21, 1993. All samples were quantitated using a linear regression curve calculated from the initial calibration. The range of the initial calibration was from 0.1 ppm to 10 ppm. A percent relative standard deviation (%RSD) of 37.2% was calculated using calibration factors determined from the initial calibration. The %RSD of 37.2 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 PCBs were not detected in the method blank at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Instrument Blanks:

E.1 PCBs were not detected in the instrument blank at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 A QC limit for precision of $\leq 50\%$, as measured by Relative Percent Difference (RPD) between soil sample values, was specified for field replicate comparability.

G.2 Samples BTR-AOC7-2S10 and BTR-AOC7-2S11 were utilized for field replicate analysis. The results of the field replicate analyses met all applicable QC criteria and the results are considered acceptable.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria and the results are

considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number BTR-SS14-2S06-3 was used for the matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for the project sample analyses.

K. Quantitation and Identification:

K.1 A discrepancy exists between the result reported by the laboratory and the result regenerated by the reviewer for sample BTR-AOC7-2S09. The laboratory reported a PQL of <0.5 ppm for Aroclor 1254, whereas the reviewer calculated Aroclor 1254 at a concentration of 8.7 ppm. The result for this sample has been corrected on the summary results page by the reviewer. The detected results are qualified "J" as estimated and usable for limited purposes.

K.2 The other samples appeared to possibly contain low levels of Aroclor 1254. However, since all calculated results were below the PQL of 0.5 ppm, they were not reported by the laboratory on the summary result page.

K.3 No other problems with compound quantitation and identification were observed for this project sample set.

L. Conclusion:

L.1 Due to a discrepancy between the result reported by the laboratory and the result regenerated by the reviewer, the detected result for Aroclor 1254 in sample BTR-AOC7-S09 is qualified "J" as estimated and usable for limited purposes.

L.2 PCBs were possibly detected in the other project soil samples, but were detected at concentrations below the PQL. Since these results were below the PQL of 0.5 ppm, they were not reported by the laboratory.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-512-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Polychlorinated Biphenyls (PCBs) by USEPA Method 8080.
MATRIX: Water
DATE: April 15, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (Seattle, WA) received 4 water samples from the Barter Island site on August 21, 1993 (referenced chain of custody record No. 396). Requested analyses were for polychlorinated biphenyls (PCBs) analysis by the PCB organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for PCBs by USEPA Method 8080 (GC/ECD) on September 1, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF01-SW04	1348	Water
BTR-LF01-SW03	1362	Water
BTR-LF01-SW02	1368	Water
BTR-LF01-SW01	1372	Water

The laboratory did not submit the raw data for sample BTR-LF01-SW01, even though results for this sample were found on the summary result page.

It should be noted that the quantitation limits reported by the laboratory (<2 ppb) for the samples were lower than those specified in the Project Sampling and Analysis Plan. Since the lowest point of the initial calibration was 10 ppm, the practical quantitation limits (PQLs) should be <5 ppb. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets

submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC Instrument ICF5 on August 21, 1993. All samples were quantitated using a linear regression curve calculated from the initial calibration. The range of the initial calibration was from 0.1 ppm to 10 ppm. A percent relative standard deviation (%RSD) of 37.2% was calculated using calibration factors determined from the initial calibration. The %RSD of 37.2 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 Continuing calibration standard (File 098R4201) percent recovery of 129% was outside the QC criteria of 75-125%. Therefore, all detected results and practical quantitation limits (PQLs) for samples associated with this calibration standard are qualified "J" as estimated and usable for limited purposes.

C.2 All QC criteria for the other continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 PCBs were not detected in the method blank at a concentration above the PQL and the results are considered acceptable.

E. Instrument Blanks:

E.1 PCBs were not detected in the instrument blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Blanks:

F.1 There were no field blanks submitted for analysis with this project sample set.

G. Field Replicate Analyses:

G.1 There were no field replicate samples submitted for analysis with this project sample set.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria, and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 Sample number TW (tap water) was used for the water matrix spike/matrix spike duplicate analyses.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.

J. System Performance:

J.1 No problems with system performance were observed for the project sample analyses.

K. Quantitation and Identification:

K.1 The PQL of the water samples was raised to 5 ppb by the reviewer since the low point of the initial calibration was 0.1 ppm.

K.2 The laboratory did not submit the raw data for sample BTR-LF01-SW01, even though results for this sample were reported on the summary result page. Since no raw data was submitted for sample result verification, the results are qualified "R" as rejected and unusable.

K.3 No other problems with compound quantitation and identification were observed for this project sample set.

L. Conclusion:

L.1 Due to previously mentioned problems in Section K.2, results for sample BTR-LF01-SW01 are qualified "R" as rejected and unusable.

L.2 PCBs were not detected in the method blank or in all other samples at a concentration above the PQL (5 ppb) and the results are considered valid and usable for all purposes.

L.3 Due to continuing calibrations problems, the PQL for samples BTR-LF01-SW04 and BTR-LF01-SW02 are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: BARTER ISLAND / DEW Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Friedman & Bruya, Inc. (Seattle, WA)
REVIEWER: Timothy Vonnahme
ANALYSIS: Polychlorinated Biphenyls (PCBs) by USEPA Method 8080.
MATRIX: Water and Soil
DATE: April 12, 1994

I. INTRODUCTION:

Friedman & Bruya, Inc. (FBI) (Seattle, WA) received 6 soil and 2 water samples from the Barter Island site on August 30, 1993 (referenced chain of custody record No. 395). Requested analyses were for polychlorinated biphenyls (PCBs) by the PCB organics extraction method described in Section 8 of the Project Sampling and Analysis Plan. The samples were analyzed for PCBs by USEPA Method 8080 (GC/ECD) on September 1 and 2, 1993.

The ICF site identification numbers and corresponding FBI laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF04-SW01	1324	Water
BTR-LF04-SW02	1328	Water
BTR-LF04-S02	1334	Soil
BTR-LF04-SD01	1336	Soil
BTR-LF04-SD02	1338	Soil
BTR-LF01-SD01	1340	Soil
BTR-LF01-SD02	1342	Soil
BTR-LF01-SD03	1344	Soil

The analytical results for the soil samples were reported with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for PCBs for project water samples were lower than those specified in the Project Sampling and Analysis Plan. Since the low point of the initial calibration is 0.1 ppm, the correct PQL is 5 ppm. It is the

opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1990, and the analytical guidelines in USEPA Method 8080, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The laboratory performed a five point initial calibration on GC instrument ICF6 on August 21, 1994. The range of the initial calibration was from 0.1 ppm to 10 ppm. All samples were quantitated using a linear regression curve calculated from the initial calibration. A percent relative standard deviation (%RSD) of 30.3% was calculated using calibration factors determined from the initial calibration. The %RSD of 30.3 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

B.2 The laboratory performed a five point initial calibration on GC Instrument ICF5 on August 21, 1993. All samples were quantitated using a linear regression curve calculated from the initial calibration. The range of the initial calibration was from 0.1 ppm to 10 ppm. A percent relative standard deviation (%RSD) of 37.2% was calculated using calibration factors determined from the initial calibration. The %RSD of 37.2 exceeds the recommended method criteria of 20.0%, therefore, the detected results are qualified "J" as estimated and usable for limited purposes.

C. Continuing Calibration:

C.1 The continuing calibration (file 098R1901) analyzed on GC instrument ICF6 reported a percent recovery of 133%, exceeding the QC criteria of 75-125%. All detected results and the practical quantitation limits (PQLs) of the samples associated with this continuing calibration are qualified "J" as estimated and usable for limited purposes.

C.2 All QC criteria for the other continuing calibrations were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 PCBs were not detected in the method blanks at a concentration above the PQL and the results are considered acceptable.

- E. Instrument Blanks:
E.1 PCBs were not detected in the instrument blank at a concentration above the PQL and the results are considered acceptable.
- F. Field Blanks:
F.1 There were no field blanks submitted for analysis with this project sample set.
- G. Field Replicate Analyses:
G.1 There were no field replicate samples submitted for analyses for this project sample set.
- H. Surrogate Recoveries:
H.1 All surrogate recoveries were calculated referenced to the closest continuing calibration standard.

H.2 All surrogate recoveries met applicable QC criteria, and the results are considered acceptable.
- I. Matrix Spike/Matrix Spike Duplicate:
I.1 Sample number BTR-AOC09-S09 was used for the soil matrix spike/matrix spike duplicate analyses. No matrix spike/matrix spike duplicate analyses were submitted for the water samples.

I.2 All of the matrix spike/matrix spike duplicate QC criteria were met and the results are considered acceptable.
- J. System Performance:
J.1 No problems with system performance were observed for the project sample analyses.
- K. Quantitation and Identification:
K.1 Samples BTR-LF04-SW02 and BTR-LF01-SD03 exhibited some type of biogenic material interference within the PCB retention time window, but did not interfere with PCB identification. No PCBs were detected in the two samples.

K.2 The PQLs for the water samples have been raised to 2500 ppm.

K.3 No other problems with compound quantitation and identification were observed for this project sample set.
- L. Conclusion:
L.1 No PCBs were detected in the method blanks or the samples at a concentration above the PQL.

L.2 Due to continuing calibration problems the PQLs for sample BTR-LF01-SD03 are qualified "J" as estimated and usable for limited purposes.

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Cynthia Schlag, ICF Kaiser Engineers
ANALYSIS: Semivolatile Organic Compounds by USEPA Method 8270
MATRIX: Soil and Water
DATE: January 19, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (Anchorage, AK) received nine (9) soil samples and six (6) water samples for semivolatile organic compound (SVOC) analyses by USEPA Method 8270 on August 16, 17, 18, 20, 21, and September 3, 1993. The water samples were extracted on August 21, 27, and 28, 1993 and analyzed for SVOCs by gas chromatography/mass spectrometry (GC/MS) on August 23, 24, 29 and September 3 and 4, 1993. The soil samples were extracted on August 30, 31 and September 3, 4 and 15, 1993 and analyzed for SVOCs by GC/MS on September 9, 16, 21, 28, 29, 30, and October 6 and 21, 1993.

The ICF site identification numbers and corresponding Commercial Testing & Engineering Co. sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SS14-SW01	93.4301-01	Water
BTR-SS14-SD01	93.4301-04	Soil
BTR-AOC10-S04	93.4301-08	Soil
BTR-AOC14-SD01	93.4305-01	Soil
BTR-AOC14-S02	93.4305-06	Soil
BTR-AOC14-SW01	93.4305-07	Water
BTR-SD08-WEB	93.4179-01	Water
BTR-BKGD-SW01	93.4179-02	Water
BTR-BKGD-SD01	93.4179-04	Soil
BTR-SD08-SD01	93.4178-03	Soil
BTR-SS13-S02	93.4212-05	Soil
BTR-AOC9-2S11-1.5	93.4616-06	Soil
BTR-AOC08-S04	93.4302-04	Soil
BTR-AOC09-SW01	93.4302-08	Water
BTR-EB-04	93.4302-10	Water

The following QC sample designations were included in project documentation: sample numbers BTR-EB-04 and BTR-SD08-WEB were designated as "equipment blanks."

Soil sample results and quantitation limits were reported by the laboratory with an adjustment for moisture content.

Sample number BTR-SD08-SD01 was not analyzed by the laboratory due to the fact that the sample was not recovered during extraction. Therefore, the results of this sample could not be validated.

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA SW-846 Method 8270, and the Project Sampling and Analysis Plan.

II. VALIDITY and COMMENTS:

A. Technical Holding Times:

A.1 Sample number BTR-AOC09-SW01 exceeded the technical holding time criteria of 7 days. This sample exceeded the extraction holding time by one day and it is the opinion of the reviewer that this will not affect data quality.

A.2 Technical holding time QC criteria were met for all other project sample analyses.

B. GC/MS Instrument Performance Check:

B.1 All QC criteria for the decafluorotriphenylphosphine (DFTPP) tunes were met and the results are considered acceptable.

C. Initial Calibration:

C.1 All QC criteria for the initial calibration were met and the results are considered acceptable.

D. Continuing Calibration:

D.1 The percent differences (%Ds) in the continuing calibrations exceeded the $\leq \pm 25\%$ QC validation criteria. The detected results and quantitation limits for the analytes listed on Table A are considered estimated (J) and usable for limited purposes only (see modified sample data sheets and Table A).

%Ds exceeding the $\leq \pm 25\%$ QC validation criteria were observed for several analytes in the continuing calibrations performed on August 23, 29, September 3, 4, 7, 20, 28, 29, and October 20 and 21, 1993. These deviations are not expected to affect the quality of the results, except for those listed on Table A.

E. Laboratory Blanks:

E.1 Target analytes were detected in the method blanks listed at concentrations above the Practical Quantitation Limit (PQL):

<u>Date extracted</u>	<u>Analyte</u>	<u>Concentration</u>
09/03/93	Di-n-butylphthalate	0.587 mg/Kg
09/03/93	Benzyl alcohol	0.336 mg/Kg
09/03/93	Bis(2-ethylhexyl)phthalate	0.360 mg/Kg
09/15/93	Di-n-butylphthalate	0.714 mg/Kg

Due to method blank contamination, the result reported for di-n-butylphthalate in sample number BTR-AOC9-2S11-1.5 is considered nondetected (U) (see modified sample data sheets).

E.2 Due to laboratory contamination, the result reported for di-n-butylphthalate in sample number BTR-BKGD-SD01 is considered nondetected (U) (see modified sample data sheets). Although not detected in the laboratory method blank, di-n-butylphthalate has historically been recognized as a common laboratory contaminant. It is the opinion of the reviewer that the di-n-butylphthalate reported in the sample noted above is an artifact.

E.3 The laboratory observed benzyl alcohol to be a contaminant in the extraction process by finding benzyl alcohol in some of the method blanks. Therefore, benzyl alcohol results reported in sample numbers BTR-AOC10-S04 and BTR-BKGD-SD01 are considered nondetected (U) (see modified sample data sheets).

E.4 Due to low surrogate recoveries in the acid fraction of the method blank extracted on August 27, 1993, the possibility of blank contamination in the acid fraction for all associated project samples cannot be determined.

E.5 No other target analytes were detected in the method blanks at concentrations above the PQL and the results are considered acceptable.

F. Surrogate Recoveries:

F.1 All acid surrogate recoveries for the laboratory method blank extracted on August 27, 1993 were below the 10% QC validation criteria. Therefore, the quantitation limits for all target analytes in the acid fraction are considered rejected (R) and unusable for all purposes (see modified sample data sheets).

F.2 All surrogate recoveries for sample number BTR-AOC14-SD01 MS were below the 10% QC validation criteria. Therefore the quantitation limits for all target analytes are considered rejected (R) and unusable for all purposes (see modified sample data sheets).

F.3 The following percent surrogate recoveries, listed below, for sample numbers BTR-EB-04, BTR-EB-04 MS, and BTR-AOC14-SD01 were outside the method QC limits.

<u>Sample No.</u>	<u>Analyte</u>	<u>Recovery</u>	<u>QC criteria</u>
BTR-EB-04	2-Fluorobiphenyl	41%	43-116%
BTR-EB-04 MS	2-Fluorophenol	19%	21-100%
BTR-AOC14-SD01	2-Fluorophenol	10%	25-121%
BTR-AOC14-SD01	Phenol-d6	11%	24-113%
BTR-AOC14-SD01	Nitrobenzene-d5	10%	23-120%
BTR-AOC14-SD01	2-Fluorobiphenyl	11%	30-115%
BTR-AOC14-SD01	2,4,6-Tribromophenol	12%	19-122%
BTR-AOC14-SD01	Terphenyl-d14	11%	18-137%

The following associated detected and nondetected results are considered estimated (J) (see modified sample data sheets):

- all target analytes in sample number BTR-AOC14-SD01

F.4 All other surrogate recoveries met applicable QC criteria and the results are considered acceptable.

G. Field Blanks:

G.1 The following target analytes listed below were detected in the equipment blank at concentrations above the PQL:

<u>Sample No.</u>	<u>Analyte</u>	<u>Concentration</u>
BTR-EB-04	Phenol	0.027 mg/L
BTR-EB-04	2-Chlorophenol	0.069 mg/L
BTR-EB-04	4-Chloro-3-methylphenol	0.075 mg/L
BTR-EB-04	Pentachlorophenol	0.046 mg/L

G.2 No other target analytes were detected in the field blank at concentrations above the PQL and the results are considered acceptable.

H. Laboratory Control Sample Analysis:

H.1 Laboratory control sample QC criteria were met for all "blank spike" analyses and the results are considered acceptable.

I. Laboratory Replicate Analysis:

I.1 No laboratory replicate analysis is included with the project documentation.

J. Field Duplicate Analysis:

J.1 No field duplicate analyses were included with the project documentation.

K. Matrix Spike/Matrix Spike Duplicate Analysis:

K.1 All matrix spike (MS) compounds in sample BTR-AOC14-SD01 were below 10% recovery. According to USEPA guidelines, organic data are not qualified based on low MS recoveries alone. The affect on the quality of the data is not known.

K.2 The recoveries in the matrix spike (MS) and matrix spike duplicate (MSD) associated with sample number BTR-EB-04 did not meet the QC criteria as noted below.

<u>Sample No.</u>	<u>Compound</u>	<u>Recovery</u>	<u>QC Limits</u>
BTR-EB-04 MS	Pyrene	48%	52-115%
BTR-EB-04 MSD	2-Chlorophenol	9%	23-134%
BTR-EB-04 MSD	4-Chloro-3-methylphenol	9%	22-147%
BTR-EB-04 MSD	Pentachlorophenol	0%	14-176%

According to USEPA guidelines, organic data are not qualified based on low MS recoveries alone. The affect on the quality of the data is not known.

The laboratory inappropriately used an equipment blank for MS/MSD analyses. Therefore, the accuracy and precision for the project samples based on a project sample matrix cannot adequately be determined.

K.3 All other MS and MSD analyses met the QC criteria and are considered acceptable.

L Internal Standards:

L.1 Internal standard areas for all analyses met applicable QC criteria and the results are considered acceptable.

M. Quantitation and Identification:

M.1 No problems were observed with analyte quantitation and identification in project sample analyses.

N. Conclusion:

N.1 Due to the above noted low surrogate recoveries in the method blank and sample number BTR-AOC14-SD01 MS, select data are considered rejected and unusable for any purposes.

N.2 Due to the above noted deficiencies in continuing calibration performance and low surrogate recoveries in the samples, select data are considered as estimates and usable for limited purposes only.

N.3 Due to the above noted laboratory blank contamination, select data are considered nondetected.

N.4 All other data are considered valid and usable for all purposes.

TABLE A
CALIBRATIONS OUTSIDE %D CRITERIA

Date	Compound	%D	Samples
Continuing Calibration - August 23, 1993	3,3'-dichlorobenzidine benzo(g,h,i)perylene	47.0 56.0	blank (aq) BTR-SD08-WEB BTR-BKGD-SW01

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Keith Strout
ANALYSIS: Semi-Volatile Organic Compounds by USEPA Method 8270A
MATRIX: Water & Soil
DATE: January 18, 1994

INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received six (6) water samples and three (3) soil samples for Semi-Volatile Organic Compound (SVOC) analysis by USEPA Method 8270A on August 19, 1993 through August 24, 1993. The samples were extracted on August 21, 1993 through September 4, 1993 and analyzed for SVOCs by gas chromatography/mass spectrometry (GC/MS) on August 23, 1993, through September 29, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-BKGD-S02	93.4175-02	SOIL
BTR-SD08-SEB	93.4175-03	WATER
BTR-SS13-SEB2	93.4213-04	WATER
BTR-LF03-SD07	93.4213-03	SOIL
BTR-SS13-WEB2	93.4211-01	WATER
BTR-LF01-SW03	93.4285-02	WATER
BTR-AOC10-SW01	93.4303-06	WATER
BTR-LF01-S01	93.4303-02	SOIL
BTR-EB-05	93.4303-05	WATER

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December, 1990 and USEPA Method 8270A and the Project Sampling and Analysis Plan.

The following QC sample designations were included in project sample analyses: sample numbers BTR-SD08-SEB, BTR-SS13-WEB2, and BTR-EB-05 were designated as equipment blanks.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project samples.

B. Instrument Tuning:

B.1 The GC/MS instrument tuning criteria were met for all project sample analyses.

C. Initial Calibration:

C.1 Initial calibration QC criteria were met for all project sample analyses.

D. Continuing Calibration:

D.1 The percent differences (%Ds) in the continuing calibrations (CCVS) exceeded the $\leq \pm 25\%$ QC criteria. Therefore, the quantitation limits for the analytes listed below in the associated samples are considered estimated (J) (see modified laboratory reports):

- Target analyte 3,3'-dichlorobenzidine in sample numbers BTR-EB-05, BTR-AOC10-SW01, BTR-SS13-SEB2, BTR-SS13-WEB, BTR-LF01-SW03 and BTR-SD08-SEB

<u>CCVS File</u>	<u>Date</u>	<u>% Difference</u>
B2303	08/23/93	46.9
B2503	08/25/93	32.1
B2515	08/25/93	39.1
B2905	08/29/93	34.5
B2913	08/29/93	36.9

- Target analyte benzo(g,h,i)perylene in sample number BTR-SD08-SEB

<u>CCVS File</u>	<u>Date</u>	<u>% Difference</u>
B2303	08/23/93	56.0
B2316	08/23/93	55.0

- Target analyte bis(2-chloroisopropyl)ether in sample numbers BTR-SS13-SEB2 and BTR-SS13-WEB

<u>CCVS File</u>	<u>Date</u>	<u>% Difference</u>
B2503	08/25/93	63.0

D.2 All other continuing calibration QC criteria were met for all project sample analyses.

- E. Laboratory Blanks:
E.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.
- F. Field Blanks:
F.1 No target analytes were detected in the field blanks at a concentration above the PQL and the results are considered acceptable.
- G. Field Duplicate Analysis:
G.1 There were no field duplicates associated with project sample analyses.
- H. Surrogate Recoveries:
H.1 Surrogates were not added to sample BTR-LF01-S01 prior to extraction and the sample was not re-extracted. Since there were no target compounds detected in this sample, the quantitation limits in this sample are considered rejected (R) and the results are unusable for any purposes (see modified sample reports).

H.2 The surrogate recoveries for 2-fluorobiphenyl in sample BTR-SD08-SEB and method blank B2906 were 42% and 38%, respectively. Although the above noted surrogate recoveries fell below the QC criteria of 43-116%, according to USEPA validation guidelines, data are not qualified if one surrogate is out of QC limits unless it is below 10% recovery.

H.3 The surrogate QC criteria was met for all other project sample analyses.
- I. Matrix Spike/Matrix Spike Duplicate Analyses:
I.1 The recoveries of 4-nitrophenol and pentachlorophenol in the matrix spike duplicate (MSD) analysis associated with sample BTR-LF03-SD07 exceeded the QC criteria as noted below.

<u>Compound</u>	<u>Recovery</u>	<u>QC Criteria</u>
4-Nitrophenol	124	11-114
Pentachlorophenol	120	17-109

According to USEPA validation guidelines, organic data are not qualified based on matrix spike recovery alone, it is the opinion of the reviewer that the quality of the data is not affected by the above noted deviations.

I.2 The recoveries of pentachlorophenol in the matrix spike (MS) and MSD analyses associated with sample BTR-LF01-S01 were 1% and 6%, respectively, falling below the QC criteria of 14-126%.

I.3 The relative percent differences (RPD) exceeding the advisory QC limits for the following two compounds were observed in the MS/MSD analyses:

<u>Compound</u>	<u>RPD</u>	<u>QC Criteria</u>
Acenaphthene	23	19
Pentachlorophenol	188	50

According to USEPA validation guidelines, organic data are not qualified based on matrix spike recovery alone, it is the opinion of the reviewer that the low MS recoveries are due to matrix interferences and the affect on the quality of the data is not known.

J. System Performance:

J.1 No problems with system performance were observed in project sample analyses.

K. Quantitation & Identification:

K.2 No problems were observed with sample quantitation and identification.

L. Conclusion:

L.1 Due to fact that surrogates were not added to sample BTR-LF01-S01 prior to extraction, select data are considered rejected and unusable for any purposes.

L.2 Due to deficiencies in the continuing calibrations, select data are considered estimated and usable for limited purposes only.

L.3 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No. 41096-4312-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Timothy Vonnahme
ANALYSIS: Pesticides by USEPA Method 8080
MATRIX: Water & Soil
DATE: January 18, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received four (4) water samples and two (2) soil samples for Pesticide analysis by USEPA Method 8080 on August 19 and 20, 1993. The samples were analyzed for Pesticides on August 23 and 24, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>MATRIX</u>
BTR-SS13-SEB2	93.4215-6	Water
BTR-SS13-WEB2	93.4215-7	Water
BTR-BKGD-SD01	93.4199-1	Soil
BTR-BKGD-SW01	93.4199-6	Water
BTR-BKGD-S02	93.4203-6	Soil
BTR-SD08-SEB	93.4203.8	Water

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December 1985, the standard operating procedure, "Guidelines for Validation of Pesticide/PCB Data Packages", the analytical guidelines in USEPA Method 8080 and the Project Sampling and Analysis Plan.

The following QC sample designations were included in project sample analyses: sample numbers BTR-SS13-SEB2, BTR-SS13-WEB2 and BTR-SD08-SEB were designated as equipment blanks.

II. VALIDITY & COMMENTS:A. Technical Holding Times:

A.1 Technical Holding time QC criteria were met for all project sample analyses.

B. Instrument Performance:

B.1 All DDT/Endrin breakdown QC criteria were met for all project sample analyses.

B.2 All retention time windows QC criteria were met for all project sample analyses.

B.3 All other QC criteria were met for all project sample analyses.

C. Initial Calibration:

C.1 Initial calibration QC criteria were met for all project sample analyses.

D. Continuing Calibration:

D.1 Continuing calibration QC criteria were met for all project sample analyses.

E. Surrogate Recoveries:

E.1 Surrogate spike percent recoveries (%Rs) for project analyses were observed to be lower than established control limits as follows:

<u>Sample No.</u>	<u>Surrogate</u>	<u>%R</u>	<u>QC Limits</u>
BLK	Tetrachloro-m-xylene	52	70-130%
BTR-SS13-SEB2	Tetrachloro-m-xylene	65	70-130%
BTR-SS13-WEB2	Tetrachloro-m-xylene	58	70-130%
BTR-BKGD-SW01	Tetrachloro-m-xylene	66	70-130%
BTR-BKGD-S02	Tetrachloro-m-xylene	49	70-130%
BTR-BKGD-S02	Decachlorobiphenyl	53	70-130%

The analytical results for alpha-BHC, beta-BHC, delta-BHC, aldrin, heptachlor, heptachlorepoide and endosulfan I in sample BTR-BKGD-S02 are considered as estimates ("J") and usable for limited purposes.

The detected results for the sample noted above may be biased low and are the minimum values at which these compounds are present in the samples. Where the results are nondetected false negatives may exist.

E.2 All other surrogate QC criteria were met for project sample analyses.

F. Laboratory Blanks:

F.1 No target analytes were detected in the method blanks at concentrations above the practical quantitation limits (PQLs), and the results are considered acceptable.

G. Field Blanks:

G.1 No target analytes were detected in the field blanks at concentrations above the PQL and the results are considered acceptable.

H. FIELD DUPLICATE ANALYSIS:

H.1 There were no field duplicates associated with these samples.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 The matrix spike/matrix spike duplicate samples associated with BTR-BKGD-SD01 contained the following analytes outside the QC limits:

<u>Sample No.</u>	<u>Compound</u>	<u>%R</u>	<u>QC Limits</u>
SPKA:	4,4-DDT	43	70-130%
	Methoxychlor	43	70-130%
DUPA	4,4-DDT	32	70-130%
	Methoxychlor	36	70-130%

No action is taken on matrix spike/matrix spike duplicate analyses alone, therefore all QC criteria were met.

Laboratory bench matrix spike/matrix spike duplicate samples associated with the above sample were analyzed, and all QC criteria were met.

I.2 All QC criteria were met for all additional matrix spike/matrix spike duplicate analyses.

J. Quantitation and Identification:

J.1 No problems were encountered with sample quantitation and identification for all samples.

K. System Performance:

K.1 No problems with system performance were observed in project sample analyses.

L. Conclusion:

L.1 Due to low surrogate recoveries in sample BTR-BKGD-S02, all analytical results are flagged as estimates and are considered usable for limited purposes.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No. 41096-4312-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Timothy Vonnahme
ANALYSIS: Polychlorinated Biphenyls (PCBs) Organic Compounds by USEPA Method 8080
MATRIX: Water & Soil
DATE: January 17, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received four (4) water samples and four (4) soil samples for PCB analysis by USEPA Method 8080 on August 19 and 20, 1993. The samples were analyzed for PCBs on August 23 and 24, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab. Sample No.</u>	<u>Matrix</u>
BTR-SS13-SEB2	93.4215-06	Water
BTR-SS13-WEB2	93.4215-07	Water
BTR-BKGD-SD01	93.4199-01	Soil
BTR-BKGD-SW01	93.4199-06	Water
BTR-BKGD-S02	93.4203-06	Soil
BTR-SD08-SEB	93.4203-08	Water
BTR-SS13-S02	93.4216-10	Soil
BTR-SS13-SD01	93.4216-05	Soil

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document, "National Functional Guidelines for Organic Data Review", December 1990, the standard operating procedure, "Guidelines for Validation of Pesticide/PCB Data Packages", December 1992, the analytical guidelines in USEPA Method 8080 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Technical Holding time QC criteria were met for all project sample analyses.

B. Instrument Performance:

B.1 All DDT/Endrin breakdown QC criteria were met for all project sample analyses.

B.2 All other QC criteria were met for all project sample analyses.

C. Initial Calibration:

C.1 All initial calibration QC criteria were met for all project sample analyses.

D. Continuing Calibration:

D.1 The percent recovery (%R) between the calculated and true amount for the compound Aroclor 1254 in the continuing calibration standard analyzed on August 24, 1993 was reported to be 123%, exceeding the recommended QC limit of 115%. Since no Aroclor 1254 was detected in the samples, the above noted deviation is not expected to have an adverse effect on data quality.

D.2 All other continuing calibration QC criteria were met for all project sample analyses.

E. Surrogate Recoveries:

E.1 The following percent surrogate recoveries (%Rs), listed below, were outside established control limits:

<u>Sample No.</u>	<u>Surrogate</u>	<u>%R</u>	<u>QC Limits</u>
BTR-SS13-S02	Tetrachloro-m-xylene	61	70-130%
BLK	Tetrachloro-m-xylene	52	70-130%
SPK	Tetrachloro-m-xylene	49	70-130%
DUP	Tetrachloro-m-xylene	35	70-130%
BTR-SS13-SEB2	Tetrachloro-m-xylene	65	70-130%
BTR-SS13-WEB2	Tetrachloro-m-xylene	58	70-130%

The following detected and nondetected results are considered estimated (J) (The laboratory reports for the SPK and DUP were not located in the data packages, therefore there are no modified data sheets for these QC samples provided in the report appendix.):

- aroclors 1016, 1221, 1232 and 1242 in QC sample numbers SPK and DUP

The detected results for the samples noted above may be biased low and are the minimum values at which these compounds are present in the samples. Where the results are nondetected, false negatives may exist.

E.2 All other surrogate QC criteria were met for project sample analyses.

F. Laboratory Blanks:

F.1 No target analytes were detected in the method blanks at a concentrations above the practical quantitation limits (PQL), and the results are considered acceptable.

G. Field Blanks:

G.1 No target analytes were detected in the field blanks at a concentrations above the (PQL), and the results are considered acceptable.

H. Field Duplicate Analysis:

H.1 There were no field duplicates associated with these samples.

I. Matrix Spike/Matrix Spike Duplicate:

I.1 All QC criteria were met for the matrix spike/matrix spike duplicate analyses associated with all project sample analyses.

J. Quantitation and Identification:

J.1 No problems were encountered with sample quantitation and identification for all project sample analyses.

K. System Performance:

K.1 No problems with system performance were encountered in project sample analyses.

L. Conclusion:

L.1 Due to deficiencies in surrogate recoveries, select data are considered estimated and usable for limited purposes.

L.2 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Keith Strout
ANALYSIS: Total Organic Carbon by USEPA Method 9060
MATRIX: Water & Soil
DATE: January 19, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received six (6) water samples and three (3) soil samples for Total Organic Carbon (TOC) analysis by EPA Method 9060 on August 19, 1993 through August 24, 1993. The samples were analyzed for TOC on August 30, 1993 through September 2, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF01-SW03	93.4285-02	Water
BTR-SD08-SEB	93.4175-03	Water
BTR-BKGD-S02	93.4175-02	Soil
BTR-LF03-SD07	93.4213-03	Soil
BTR-SS13-SEB2	93.4213-04	Water
BTR-SS13-WEB	93.4211-01	Water
BTR-AOC10-SW01	93.4303-06	Water
BTR-LF01-S01	93.4303-02	Soil
BTR-EB-05	93.4303-05	Water

Sample numbers BTR-SD08-SEB, BTR-SS13-SEB2, BTR-SS13-WEB and BTR-EB-05 were designated as equipment blanks.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December, 1990 and USEPA Method 9060 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Sample number BTR-LF01-S01 was sampled on August 21, 1993 and analyzed on September 20, 1993, exceeding the technical holding time QC criteria of twenty-eight (28) days by two (2) days. It is the opinion of the reviewer that this is not expected to have an adverse effect on the data quality.

A.2 All other technical holding time criteria were met for project sample analyses.

B. Initial Calibrations:

B.1 Initial calibration QC criteria were met for all project sample analyses.

C. Continuing Calibrations:

C.1 The calibration verification standard recoveries for the samples listed below fell outside the advisory QC limits of 90-110%. Therefore the detected results for TOC in samples BTR-AOC10-SW01 and BTR-LF01-SW03 and the practical quantitation limits (PQL) for TOC in sample BTR-EB-05 are considered as estimated (J) and usable for limited purposes (see modified sample data sheets).

<u>Sample No.</u>	<u>CVS % Recovery</u>
BTR-AOC10-SW01	114%
BTR-EB-05	114%
BTR-LF01-SW03	85%

D. Laboratory Blanks:

D.1 TOC was not detected in the method blanks associated with these samples at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Field Blanks:

E.1 TOC was not detected in the equipment blank at a concentration above the (PQL) and the results are considered acceptable.

F. Laboratory Control Sample Analysis:

F.1 The laboratory control sample (LCS) recovery associated with samples BTR-LF01-SW03 and BTR-SS13-WEB was 87%, falling marginally below the QC criteria of 89-110%. It is the opinion of the reviewer that this is not expected to have an adverse effect on the data quality.

F.2 All other LCS percent recoveries met applicable QC criteria for accuracy.

- G. Laboratory Replicate Analysis:
G.1 Laboratory replicate analyses submitted with project data met all applicable QC criteria for precision as measured by Relative Percent Difference (RPD) and the results are considered acceptable.
- H. Field Duplicate Analysis:
H.1 There were no field duplicates designated for analysis with these samples.
- I. Matrix Spike:
I.1 The matrix spike recovery met all applicable QC criteria and the results are considered acceptable.
- J. Quantitation:
J.1 No problems were encountered with sample quantitation and the results are considered acceptable.
- K. Conclusion:
K.1 Due to deficiencies in calibration, select data are considered estimates and usable for limited purposes. All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT (Revised)

PROGRAM: DEW-Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Traci Grizzle, ICF Kaiser Engineers
ANALYSIS: Total and Dissolved Metals by USEPA Method 6010
MATRIX: Soil and Water
DATE: January 4, 1994 (Revision February 2, 1994)

I. INTRODUCTION:

Commercial Testing & Engineering Co. (Anchorage, AK) received two (2) water samples for total and dissolved metals analyses and one (1) soil sample for total metals analyses by USEPA Method 6010 on August 19, 1993. The samples were digested on August 20 and August 24, 1993 and analyzed for metals by inductively coupled plasma atomic emission spectroscopy (ICP) on August 24 and August 25, 1993.

The ICF site identification numbers and corresponding Commercial Testing & Engineering Co. laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-SD08-WEB	4179-1
BTR-BKGD-SW01	4179-2
BTR-SD08-WEB (F)	4179-1
BTR-BKGD-SW01 (F)	4179-2
BTR-BKGD-SD01	4179-4

The above noted sample numbers identified as (F) were field-filtered samples and analyzed for dissolved metals on August 24, 1993.

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses," October 1989 and SW-846 USEPA Method 6010.

II. VALIDITY and COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 The percent recovery for silver in the initial calibration performed on August 24, 1993 was marginally below the applicable QC criteria. This slight discrepancy is not expected to affect data quality.

B.2 All other initial calibration QC criteria were met for all project sample analyses.

C. Continuing Calibrations:

C.1 Continuing calibration QC criteria were met for all project sample analyses.

D. Blank Analyses:

D.1 No target analytes were detected in the method and calibration blanks (initial and continuing calibration blanks) above the practical quantitation limit (PQL) and the results are considered acceptable.

E. ICP Interference Check Sample (ICS) Analyses:

E.1 The spike recovery for the indicated target analyte exceeded the established QC limits for the interference check sample (ICS) analysis performed on August 24, 1993 as follows:

<u>Analyte</u>	<u>Recovery</u>	<u>QC limits</u>
Zinc	132%	80-120%

The ICS recovery for zinc exceeded the upper QC limit of 120%, indicating a possible high bias. However, since the zinc results for all samples were non-detected, no adverse effects are expected on data quality due to the above noted ICS recovery. The ICS analyses met all other applicable QC criteria.

F. Laboratory Control Sample Analyses:

F.1 All laboratory control sample QC criteria were met.

G. Laboratory Replicate Analysis:

G.1 There were no laboratory replicate analyses included in the project documentation.

H. Field Duplicate Analysis:

H.1 There were no field duplicate analyses included in the project documentation.

I. Matrix Spike Analysis:

I.1 Sample number BTR-SD08-WEB was utilized for the matrix spike (MS) analyses. The MS recoveries for aluminum and iron were 225% and 3800%, respectively; exceeding the advisory QC criteria of 75-125%. However, the sample concentration exceeds the spike concentration by a factor of four or more for the above noted target analytes. Therefore, data are not qualified on the basis of these high MS recoveries. Post-digestion spike recovery analyses were performed on August 25, 1993 and the recovery results for all re-analyses met applicable QC criteria.

J. Quantitation and Identification:

J.1 No problems were observed with analyte quantitation and identification in project sample analyses.

K. Conclusion:

K.1 All data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No.41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Keith Strout
ANALYSIS: Total Dissolved Solids by USEPA Method 160.1
MATRIX: Water
DATE: January 19, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co.(CT&E) (Anchorage, AK) received three (3) water samples for total dissolved solids (TDS) analysis by USEPA Method 160.1 on August 18 through 21, 1993. The samples were analyzed for total dissolved solids (TDS) on August 27 and 31, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-AOC10-SW01	93.4303-06
BTR-LF01-SW03	93.4285-02
BTR-SS13-WEB	93.4211-01

Sample number BTR-SS13-WEB was designated as an equipment blank.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses", October 1989, USEPA Method 160.1 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Sample number BTR-AOC10-SW01 was sampled on August 21, 1993 and analyzed on August 31, 1993, exceeding the technical holding

time QC criteria of seven (7) days by three (3) days. Therefore, the detected sample result in the above noted sample is considered as an estimated (J) and usable for limited purposes only.

A.2 All technical holding time QC criteria were met for other project sample analyses.

B. Calibration:

B.1 The calibration recovery associated with sample number BTR-LF01-SW03 was 120%, slightly exceeding the advisory QC recovery criteria of 83-117%. Therefore, the detected result for TDS in the above noted sample is considered as an estimated (J) and usable for limited purposes.

B.2 All other calibration QC criteria were met for sample calibration analyses.

C. Laboratory Blanks:

C.1 TDS was detected in the method blank associated with sample number BTR-AOC10-SW01 at a concentration of 12 mg/L, exceeding the QC criteria of 10 mg/L. Therefore the practical quantitation limit for TDS in the above noted sample is raised to 12 mg/L. This is not expected to have an effect on the TDS result in the above noted sample.

C.2 All other QC criteria were met for the TDS analyses in the laboratory blank analyses and the results are considered acceptable.

D. Field Blanks:

D.1 TDS was detected in the equipment blank BTR-SS13-WEB at a concentration of 70 mg/L. This is not expected to have an effect on the detected results of sample numbers BTR-AOC10-SW01 and BTR-LF01-SW03, because the above noted equipment blank is not associated with the two samples.

E. Laboratory replicate Analyses:

E.1 Laboratory replicate analyses submitted with project data met all applicable QC criteria for precision as measured by Relative Percent Difference (RPD) and the results are considered acceptable.

F. Field Duplicate Analysis:

F.1 There were no field duplicate analyses associated with these samples.

G. Quantitation:

G.1 No problems were encountered with sample quantitation.

H. Conclusion:

H.1 Due to exceeded holding time and deficiency in calibration, select data are considered estimates and usable for limited

purposes. All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Sharon Lin, ICF Kaiser Engineers, Inc.
ANALYSIS: Total Dissolved Solids by USEPA Method 160.1
MATRIX: Water
DATE: January 27, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received one (1) water sample for Total Dissolved Solids (TDS) analysis by USEPA Method 160.1 on August 20, 1993. The sample was analyzed for TDS on August 27, 1993.

The ICF site identification number and corresponding CT&E laboratory sample identification number are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-LF04-SW01	4286-1

The analytical result is presented on modified sample data sheet submitted by the laboratory. (Definitions of data qualifiers are listed in Table 1B). This report was prepared in accordance with the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganics Analysis," October 1989, the analytical guidelines in USEPA Method 160.1 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

- A. Technical Holding Times:
 - A.1 All technical holding time QC criteria were met for project sample analyses.
- B. Calibration:
 - B.1 All applicable QC criteria were met for sample calibration analyses.

- C. Laboratory Blanks:
C.1 All QC criteria were met for the TDS analyses in the laboratory blank analyses and the results are considered acceptable.
- D. Field Blanks:
D.1 There were no field blanks analyses associated with the project sample.
- E. Laboratory replicate Analyses:
E.1 Laboratory replicate analyses submitted with project data met all applicable QC criteria for precision as measured by Relative Percent Difference (RPD) and the results are considered acceptable.
- F. Field Duplicate Analysis:
F.1 There were no field duplicate analyses associated with the project sample.
- G. Quantitation:
G.1 No problems were encountered with sample quantitation.
- H. Conclusion:
H.1 All data are considered valid and usable for all purposes.

LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Sharon Lin, ICF Kaiser Engineers, Inc.
ANALYSIS: Total Dissolved Solids by USEPA Method 160.1
MATRIX: Water
DATE: January 21, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co.(CT&E) (Anchorage, AK) received five (5) water samples for Total Dissolved Solids (TDS) analysis by USEPA Method 160.1 on August 19 and 24, 1993. The samples were analyzed for TDS on August 23 and 31, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-SD08-WEB	4179-1
BTR-BKGD-SW01	4179-2
BTR-BKGD-SW02	4179-3
BTR-AOC09-SW01	4302-8
BTR-AOC14-SW01	4305-7

Sample number BTR-SD08-WEB was designated as an equipment blank.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses", October 1989, the analytical guidelines in USEPA Method 160.1 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:A. Technical Holding Times:

A.1 The following samples exceeded the technical holding time QC criteria of seven (7) days. Therefore, the results in the following listed samples are considered as estimates (J) and usable for limited purposes only.

<u>Sample Number</u>	<u>Collection Date</u>	<u>Analyses Date</u>	<u>Days Exceeded</u>
BTR-AOC09-SW01	8/20/93	8/31/93	4
BTR-AOC14-SW01	8/21/93	8/31/93	3

A.2 All other technical holding time QC criteria were met for project sample analyses.

B. Calibration:

B.1 All applicable QC criteria were met for sample calibration analyses.

C. Laboratory Blanks:

C.1 TDS was detected in the method blank associated with all samples at a concentration of 12 mg/L, exceeding the QC criteria of 10 mg/L. Therefore the practical quantitation limit for TDS in all associated samples is raised to 12 mg/L. This is not expected to have an effect on TDS results in the indicated samples.

C.2 All other QC criteria were met for the TDS analyses in the laboratory blank analyses and the results are considered acceptable.

D. Field Blanks:

D.1 TDS was detected in equipment blank BTR-SD08-WEB at a concentration of 30 mg/L. Due to high concentrations of TDS detected in the associated sample numbers BTR-BKGD-SW01 and BTR-BKGD-SW02, the TDS result in the above noted equipment blank is not qualified.

E. Laboratory replicate Analyses:

E.1 Laboratory replicate analyses submitted with project data met all applicable QC criteria for precision as measured by Relative Percent Difference (RPD) and the results are considered acceptable.

F. Field Duplicate Analysis:

F.1 There were no field duplicate analyses associated with these samples.

G. Quantitation:

G.1 No problems were encountered with sample quantitation.

H. Conclusion:

H.1 Due to exceeded holding times, select data are considered as estimates and usable for limited purposes. Due to method blank contaminations, select PQLs were raised. All other data are considered valid and usable for all purposes.

ANALYSIS: Total Suspended Solids by USEPA Method 160.2
MATRIX: Water
DATE: January 19, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received three (3) water samples for Total Suspended Solids (TSS) analysis by USEPA Method 160.2 on August 18, 1993 through 21, 1993. The samples were analyzed for TSS on August 24 and 31, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-AOC10-SW01	93.4303-06
BTR-LF01-SW03	93.4285-02
BTR-SS13-WEB	93.4211-01

Sample number BTR-SS13-WEB was designated as an equipment blank.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses", October 1989, the analytical guidelines in USEPA Method 160.2 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Sample number BTR-AOC10-SW01 was sampled on August 21, 1993 and analyzed on August 31, 1993, exceeding the technical holding time QC criteria of seven (7) days by three (3) days. Therefore,

the detected sample result in the above noted sample is considered as an estimate (J) and usable for limited purposes only.

A.2 All technical holding time QC criteria were met for other project sample analyses.

B. Calibration:

B.1 Method calibration is not a requirement for USEPA Method 160.2.

C. Laboratory Blanks:

C.1 TSS was not detected in the method blanks associated with the samples at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

D. Field Blanks:

D.1 TSS was detected in equipment blank BTR-SS13-WEB at a concentration of 7 mg/L. This is not expected to have an effect on the detected results of sample numbers BTR-AOC10-SW01 and BTR-LF01-SW03, because the above noted equipment blank is not associated with the two samples.

E. Laboratory Replicate Analyses:

E.1 Laboratory replicate analyses submitted with project data met all applicable QC criteria for precision as measured by Relative Percent Difference (RPD) and the results are considered acceptable.

F. Field Duplicate Analyses:

F.1 There were no field duplicate analyses associated with these samples.

G. Quantitation:

G.1 No problems were encountered with sample quantitation.

H. Conclusion:

H.1 Due to exceeded holding time, select data is considered as an estimate and usable for limited purposes. All other data are considered valid and usable for all purposes.

ANALYSIS: Total Suspended Solids by USEPA Method 160.2
MATRIX: Water
DATE: January 24, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received five (5) water samples for Total Suspended Solids (TSS) analysis by USEPA Method 160.2 on August 19 and 24, 1993. The samples were analyzed for TSS on August 24 through September 2, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-SD08-WEB	4179-1
BTR-BKGD-SW01	4179-2
BTR-BKGD-SW02	4179-3
BTR-AOC09-SW01	4302-8
BTR-AOC14-SW01	4305-7

Sample number BTR-SD08-WEB was designated as an equipment blank.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses", October 1989, the analytical guidelines in USEPA Method 160.2 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:A. Technical Holding Times:

A.1 The following samples exceeded the technical holding time QC criteria of seven (7) days. Therefore, the results in the following listed samples are considered as estimates (J) and usable for limited purposes only.

<u>Sample Number</u>	<u>Collection Date</u>	<u>Analyses Date</u>	<u>Days Exceeded</u>
BTR-AOC09-SW01	8/20/93	8/31/93	4
BTR-AOC14-SW01	8/21/93	9/02/93	5

A.2 All other technical holding time QC criteria were met for project sample analyses.

B. Calibration:

B.1 Method calibration is not a requirement for USEPA Method 160.2.

C. Laboratory Blanks:

C.1 TSS was not detected in the method blanks associated with the samples at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

D. Field Blanks:

D.1 TSS was detected in equipment blank BTR-BKGD-WEB at a concentration of 3.5 mg/L. Due to elevated TSS concentration detected in the above noted equipment blank, the detected TSS result in sample number BTR-BKGD-SW01 is considered as an estimate (J) and usable for limited purposes only.

E. Laboratory Replicate Analyses:

E.1 Laboratory replicate analyses submitted with project data met all applicable QC criteria for precision as measured by Relative Percent Difference (RPD) and the results are considered acceptable.

F. Field Duplicate Analyses:

F.1 There were no field duplicate analyses associated with these samples.

G. Quantitation:

G.1 No problems were encountered with sample quantitation.

H. Conclusion:

H.1 Due to exceeded holding times and high TSS concentration detected in the equipment blank, select data are considered as estimates and usable for limited purposes. All other data are considered valid and usable for all purposes.

LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Keith Strout, ICF Kaiser Engineers
ANALYSIS: Total Metals by USEPA Method 6010 and USEPA Method 7841 (Thallium)
MATRIX: Water & Soil
DATE: January 12, 1994 (Revision February 2, 1994)

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received three (3) water samples and two (2) soil samples for total metals analyses by USEPA Method 6010 and thallium analyses by USEPA Method 7841 on August 19 through 24, 1993. The samples were digested on August 23 through 28, 1993, and analyzed for total metals by inductively coupled plasma atomic emission spectroscopy (ICP) and for thallium by atomic absorption furnace technique (GFAA) on August 24 through 30, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab. Sample No.</u>	<u>Matrix</u>
BTR-LF01-S01	93.4303-02	Soil
BTR-EB-05	93.4303-05	Water
BTR-SS13-SEB2	93.4213-04	Water
BTR-BKGD-S02	93.4175-02	Soil
BTR-SD08-SEB	93.4175-03	Water

Sample numbers BTR-EB-05, BTR-SS13-SEB2 and BTR-SD08-SEB were designated as equipment blanks.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B.

This report was prepared in accordance with the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses," October 1989, USEPA Method 6010 and USEPA Method 7841, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 Initial calibration QC criteria were met for project sample analyses.

C. Continuing Calibration:

C.1 A percent recovery (%R) of 88% was obtained for sodium analyte in the continuing calibration verification analyses performed on August 24, 1993, falling outside the advisory QC limits of 90-110%. Therefore, the detected result for sodium in sample BTR-SD08-SEB is estimated (J) and usable for limited purposes only (see modified sample data sheets).

C.2 Continuing calibration QC criteria were met for all other project sample analyses.

D. Laboratory Blanks:

D.1 The target analytes were not detected in the calibration blanks at a concentration above the Practical Quantitation Limit (PQL) and the results are considered acceptable.

E. Field Blanks:

E.1 Iron was detected in the equipment blank BTR-EB-05 at a concentration of 0.200 mg/L, exceeding the QC criteria of 0.100 mg/L. However, since iron was detected at a concentration of 5000 mg/Kg (greater than 10X the PQL) in the associated sample number BTR-LF01-S01, data were not qualified.

E.2 No other target analytes were detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.

F. Field Duplicate Analysis:

F.1 There were no field duplicate analyses included in the project documentation associated with these samples.

G. Laboratory Replicate Analysis:

G.1 The sample duplicate analyses associated with sample BTR-BKGD-S02 exceeded the QC criteria of $\leq 50\%$ for precision as measured by Relative Percent Difference (RPD) for the following analytes:

<u>Analytes</u>	<u>RPD</u>
Ca	63.0
Mg	74.0

All detected results for the above analytes in sample number BTR-BKGD-S02 are considered as estimates (J) and usable for limited purposes (see modified sample data sheets).

G.2 All other analytes in the above duplicate analyses, and all other duplicate analyses associated with project samples met all QC criteria and the results are considered acceptable.

H. ICP Interference Check Sample (ICS) Analysis:

H.1 The ICS analyses met all applicable QC criteria.

I. Laboratory Control Sample Analysis:

I.1 All laboratory control sample analyses associated with project samples met applicable QC criteria and the results are considered acceptable.

J. Matrix Spike Analysis:

J.1 The matrix spike (MS) recoveries for the target analytes were outside the established QC limits of 75-125% in the samples listed below:

<u>Sample Number</u>	<u>Analyte</u>	<u>Recovery</u>
BTR-BKGD-S02	Aluminum	225%
BTR-SD08-SEB	Aluminum	225%
BTR-BKGD-S02	Calcium	198%
BTR-SD08-SEB	Calcium	198%
BTR-BKGD-S02	Iron	-3800%
BTR-SD08-SEB	Iron	-3800%
BTR-LF01-S01	Magnesium	70%
BTR-EB-05	Magnesium	70%
BTR-BKGD-S02	Magnesium	143%
BTR-SD08-SEB	Magnesium	143%
BTR-BKGD-S02	Manganese	60%
BTR-SD08-SEB	Manganese	60%
BTR-LF01-S01	Sodium	-110%
BTR-EB-05	Sodium	-110%
BTR-SS13-SEB2	Sodium	1466%

The sample concentration exceeds the spike concentration by a factor of four or more for the above noted target analytes. Therefore, data are not qualified on the basis of the deviations in MS recoveries. Post-digestion spike recovery analyses were performed on August 24 through 30, 1993. The recovery results for all post-digestion spike analyses met applicable QC criteria.

J.2 All remaining analytes in the above matrix spike analyses, and all other matrix spike analyses associated with project samples met all acceptable criteria and the results are considered acceptable.

K. Quantitation:

K.1 No problems were encountered with sample quantitation in project sample analyses.

L. Conclusion:

L.1 Due to the above noted deficiencies in continuing calibration check and laboratory replicate analyses, select data are considered estimated and usable for limited purposes only. All other data are considered valid and usable for all purposes.

LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Sharon Lin, ICF Kaiser Engineers, Inc.
ANALYSIS: Total & Dissolved Metals by USEPA Method 6010 &
Thallium by USEPA Method 7841
MATRIX: Soil and Water
DATE: January 27, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received one (1) water and one (1) soil sample for total and dissolved metals analyses by USEPA Methods 6010 and 7841 on August 20 and 24, 1993. The samples were digested on August 27 and 28, 1993 and analyzed for total metals by inductively coupled plasma atomic emission spectroscopy (ICP) and for thallium by atomic absorption furnace technique (GFAA) on August 28 through 30, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF04-SW01	4286-1	Water
BTR-LF04-SD01	4286-3	Soil
BTR-LF04-SW01 (F)	4286-1	Water

Sample number BTR-LF04-SW01 (F) was designated as a field-filtered sample and analyzed for dissolved metals and dissolved thallium by ICP and GFAA, respectively, on August 30, 1993.

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganics Analysis," October 1989, USEPA Method 6010, USEPA Method 7841 and the Project Sampling and Analysis Plan.

II. VALIDITY and COMMENTS:

- A. Technical Holding Times:
A.1 Technical holding time QC criteria were met for all project sample analyses.
- B. Initial Calibration:
B.1 Initial calibration QC criteria were met for project sample analyses.
- C. Continuing Calibrations:
C.1 Continuing calibration QC criteria were met for project sample analyses.
- D. Laboratory Blank Analyses:
D.1 No target analytes were detected in the method and calibration blanks (initial and continuing calibration blanks) above the practical quantitation limit (PQL) and the results are considered acceptable.
- E. Field Blanks:
E.1 There were no field blank analyses included in the project documentation.
- F. Field Duplicate Analysis:
F.1 There were no field duplicate analyses included in the project documentation.
- G. Laboratory Replicate Analysis:
G.1 There were no laboratory replicate analyses included in the project documentation.
- H. ICP Interference Check Sample (ICS) Analyses:
H.1 All applicable QC criteria were met for the ICS analyses.
- I. Laboratory Control Sample Analyses:
I.1 All laboratory control sample analyses associated with project samples met applicable QC criteria and the results are considered acceptable.

J. Matrix Spike Analysis:

J.1 The matrix spike (MS) recovery analysis associated with sample number BTR-LF04-SW01 was not performed and this should be noted. However, post-digestion spike analyses were performed and the results met all applicable QC criteria.

J.2 The MS recovery results for the following target analytes exceeded the established QC limits of 75-125% in the sample listed below:

<u>Sample Number</u>	<u>Analyte</u>	<u>%Recovery</u>
BTR-LF04-SD01-MS	Aluminum	21400
BTR-LF04-SD01-MS	Iron	360

Due to above noted deviations in MS recoveries, post-digestion spike recovery analyses were performed on August 29, 1993. The recovery results for all post-digestion spike analyses met applicable QC criteria and the results are considered acceptable.

J.3 All other applicable QC criteria were met for the MS analyses.

K. Quantitation:

K.1 No problems were observed with analyte quantitation in project sample analyses.

L. Conclusion:

L.1 All data are considered valid and usable for all purposes.

DATA VALIDATION REPORT (Revised)

PROGRAM: DEW-Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Traci Grizzle, ICF Kaiser Engineers
ANALYSIS: Total Metals by USEPA Method 6010
MATRIX: Soil
DATE: January 4, 1994 (Revision February 2, 1994)

I. INTRODUCTION:

Commercial Testing & Engineering Co. (Anchorage, AK) received one (1) soil sample for total metals analyses by USEPA Method 6010 on August 19, 1993. The sample was digested on August 24, 1993 and analyzed for metals by inductively coupled plasma atomic emission spectroscopy (ICP) on August 25, 1993.

The ICF site identification number and corresponding Commercial Testing & Engineering Co. laboratory sample identification number are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-SD08-SD01	4178-3

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses," October 1989 and SW-846 USEPA Method 6010.

II. VALIDITY and COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 Initial calibration QC criteria were met for all project sample analyses.

C. Continuing Calibrations:

C.1 Continuing calibration QC criteria were met for all project sample analyses.

D. Blank Analyses:

D.1 No target analytes were detected in the method and calibration blanks (initial and continuing calibration blanks) above the practical quantitation limit (PQL) and the results are considered acceptable.

E. ICP Interference Check Sample (ICS) Analyses:

E.1 The spike recovery for the indicated target analyte exceeded the established QC limits for the interference check sample (ICS) analysis performed on August 25, 1993 as follows:

<u>Analyte</u>	<u>Recovery</u>	<u>QC limits</u>
Zinc	139%	80-120%

The ICS recovery for zinc exceeded the upper QC limit of 120%, indicating possible high bias. Therefore, the result for zinc in the associated sample is considered an estimate (J) (see modified sample data sheet).

E.2 The results for all other ICS analyses met applicable QC criteria.

F. Laboratory Control Sample Analyses:

F.1 All laboratory control sample QC criteria were met.

G. Laboratory Replicate Analysis:

G.1 There were no laboratory replicate analyses included in the project documentation.

H. Field Duplicate Analysis:

H.1 There were no field duplicate analyses included in the project documentation.

I. Matrix Spike Analysis:

I.1 Sample number BTR-SD08-SD01 was utilized for the matrix spike (MS) analyses. The spike recoveries for magnesium and manganese are 143% and 60%, respectively, falling outside the advisory QC criteria of 75-125%. Due to the above noted deficiency in MS analysis, the detected results for magnesium and manganese in the project sample are considered as estimates (J) and usable for limited purposes only (see modified sample data sheet). A post-digestion spike recovery analysis was performed on August 25, 1993 and the recovery results for all re-analyses met

applicable QC criteria.

The MS recoveries for aluminum, calcium and iron did not meet the advisory QC criteria of 75-125%. However, the sample concentration exceeds the spike concentration by a factor of four or more for the above noted target analytes. Therefore, data are not qualified on the basis of these high MS recoveries.

I.2 All other QC criteria were met for the MS analysis.

J. Quantitation and Identification:

J.1 No problems were observed with analyte quantitation and identification in project sample analyses.

K. Conclusion:

K.1 Due to the above noted performance deficiency in the interference check sample and matrix spike analyses, select data are considered estimates and usable for limited purposes only. All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT (Revised)

PROGRAM: DEW-Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Sharon Lin, ICF Kaiser Engineers
ANALYSIS: Total Metals by USEPA Method 6010 & Thallium by USEPA Method 7841
MATRIX: Soil and Water
DATE: January 21, 1994 (Revision February 2, 1994)

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received one (1) water and two (2) soil samples for total metals analyses by USEPA Methods 6010 and 7841 on August 20 and 24, 1993. The samples were digested on August 24 and 28, 1993 and analyzed for total metals by inductively coupled plasma atomic emission spectroscopy (ICP) and for thallium by atomic absorption furnace technique (GFAA) on August 25 and 30, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SS13-SD01	4212-2	Soil
BTR-SS13-S02	4212-5	Soil
BTR-EB04	4302-10	Water

Sample number BTR-EB04 was designated as an equipment blank.

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses," October 1989, USEPA Method 6010 and USEPA Method 7841, and the Project Sampling and Analysis Plan.

II. VALIDITY and COMMENTS:

- A. Technical Holding Times:
A.1 Technical holding time QC criteria were met for all project sample analyses.
- B. Initial Calibration:
B.1 Initial calibration QC criteria were met for project sample analyses.
- C. Continuing Calibrations:
C.1 Continuing calibration QC criteria were met for all project sample analyses.
- D. Laboratory Blank Analyses:
D.1 No target analytes were detected in the method and calibration blanks (initial and continuing calibration blanks) above the practical quantitation limit (PQL) and the results are considered acceptable.
- E. Field Blanks:
E.1 No target analyte was detected in equipment blank BTR-EB04 at a concentration above the PQL and the results are considered acceptable.
- F. Field Duplicate Analysis:
F.1 There were no field duplicate analyses included in the project documentation.
- G. Laboratory Replicate Analysis:
G.1 There were no laboratory replicate analyses included in the project documentation.
- H. ICP Interference Check Sample (ICS) Analyses:
H.1 All applicable QC criteria were met for the ICS analyses.
- I. Laboratory Control Sample Analyses:
I.1 All laboratory control sample analyses associated with project samples met applicable QC criteria and the results are considered acceptable.
- J. Matrix Spike Analysis:
J.1 Sample number BTR-SS13-S02 was utilized for the matrix spike (MS) analysis. The spike recoveries for aluminum and iron fell outside of the advisory QC criteria of 75-125%. However, the sample concentration exceeds the spike concentration by a factor of four or more for the above noted analytes. Therefore, data are not qualified on the basis of these high MS recoveries.

J.2 All other applicable QC criteria were met for the matrix spike analyses.

K. Quantitation:

K.1 No problems were observed with analyte quantitation in project sample analyses.

L. Conclusion:

L.1 All data are considered valid and usable for all purposes.

DATA VALIDATION REPORT (Revised)

PROGRAM: DEW-Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Traci Grizzle, ICF Kaiser Engineers
ANALYSIS: Total and Dissolved Metals by USEPA Method 6010
MATRIX: Soil and Water
DATE: January 4, 1994 (Revision February 2, 1994)

I. INTRODUCTION:

Commercial Testing & Engineering Co. (Anchorage, AK) received three (3) soil samples for total metals analyses and one (1) water sample for total and dissolved metals analyses by USEPA Method 6010 on August 24, 1993. The samples were digested on August 27, 1993 and analyzed for metals by inductively coupled plasma atomic emission spectroscopy (ICP) on August 29 and August 30, 1993.

The ICF site identification numbers and corresponding Commercial Testing & Engineering Co. laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-SS14-S04	4301-7
BTR-SS14-SD01	4301-4
BTR-SS14-SW01	4301-1
BTR-AOC10-S04	4301-8
BTR-SS14-SW01 (F)	4301-1

Sample number BTR-SS14-SW01 (F) was a field-filtered sample and analyzed for dissolved metals on August 30, 1993.

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses," October 1989 and SW-846 USEPA Method 6010.

II. VALIDITY and COMMENTS:

- A. Technical Holding Times:
A.1 Technical holding time QC criteria were met for all project sample analyses.
- B. Initial Calibration:
B.1 Initial calibration QC criteria were met for all project sample analyses.
- C. Continuing Calibrations:
C.1 The percent recovery for silver in the continuing calibration performed on August 29, 1993 was below the QC criteria. Therefore, the results for silver in the following associated samples are considered estimates (UJ) (see modified sample data sheets):
 - Sample numbers BTR-SS14-SD01, BTR-SS14-S04 and BTR-AOC10-S04.
 C.2 All other continuing calibration QC criteria were met for all project sample analyses.
- D. Blank Analyses:
D.1 No target analytes were detected in the method and calibration blanks (initial and continuing calibration blanks) above the practical quantitation limit (PQL) and the results are considered acceptable.
- E. ICP Interference Check Sample (ICS) Analyses:
E.1 The ICS analyses met all applicable QC criteria.
- F. Laboratory Control Sample Analyses:
F.1 All laboratory control sample QC criteria were met.
- G. Laboratory Replicate Analysis:
G.1 QC limits for precision of $\leq 20\%$ for water samples and $\leq 35\%$ for soil samples, as measured by the Relative Percent Difference (RPD) between sample results, were specified for laboratory replicate comparability.

Water sample BTR-SS14-SW01 and soil sample BTR-SS14-SD01 were utilized for the laboratory replicate analyses.

The laboratory replicate analyses for sample number BTR-SS14-SW01 met all applicable QC criteria.

G.2 The results of the laboratory replicate analyses for sample number BTR-SS14-SD01 for the indicated target analytes exceeded the established QC limits as follows:

<u>Analyte</u>	<u>RPD</u>
Calcium	96%
Chromium	38%
Magnesium	200%
Manganese	41%

The RPDs for analytes calcium and magnesium substantially exceeded the QC limit of $\leq 35\%$. The inconsistency of the results in the analysis of the laboratory replicate may be due to sample non-homogeneity. Due to the above noted deviations, the reported results for the above noted analytes are considered estimates (J) (see modified sample data sheets) for the following associated samples:

- Sample numbers BTR-SS14-SD01, BTR-SS14-S04 and BTR-AOC10-S04.

G.3 All other QC criteria for the above laboratory replicate analyses were met.

H. Field Duplicate Analysis:

H.1 There were no field duplicate analyses included in the project documentation.

I. Matrix Spike Analysis:

I.1 Project sample numbers BTR-SS14-SD01 and BTR-SS14-SW01 (F) were utilized for the associated matrix spike (MS) analyses. The spike recovery for lead was 63% for sample BTR-SS14-SD01-MS, falling below the lower QC limit of 75%. Due to the above noted low MS recovery, the detected and non-detected results for lead in all samples are considered as estimates (J) and usable for limited purposes only (see modified sample data sheets). A post-digestion spike recovery analysis was performed on August 29, 1993 and the result was within the advisory QC limits of 75-125%.

The MS recoveries for aluminum, calcium and iron exceeded the upper QC limit of 125%. However, since the sample concentrations exceeded the spike concentrations by a factor of four or more for the above noted target analytes, associated sample data were not qualified on the basis of these high MS recoveries.

I.2 All other QC criteria were met for project MS analyses.

J. Quantitation:

J.1 No problems were observed with analyte quantitation in project sample analyses.

K. Conclusion:

K.1 Due to the above noted performance deficiencies in the continuing calibration, laboratory replicate and matrix spike analyses, select data are considered estimates and usable for

limited purposes only. All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Cynthia E. Schlag
ANALYSIS: Extractable Petroleum Hydrocarbons by USEPA Method 8100M
MATRIX: Soil
DATE: January 21, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received two (2) soil samples for Extractable Petroleum Hydrocarbons (EPH) analysis by USEPA Method 8100M (modified) on August 16 and 18, 1993. The samples were extracted on August 20 and 21, 1993 and analyzed for EPH by gas chromatography with flame ionization detection on August 21 and 26, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-SD08-SD01	93.4198-08
BTR-LF03-SD07	93.4219-10

There were no QC sample designations included in project documentation.

The analytical results for project soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared according to the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8100M and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

- B. Initial Calibration:
B.1 All QC criteria for the initial calibration were met and the results are considered acceptable.
- C. Continuing Calibrations:
C.1 All QC criteria for continuing calibration were met and the results are considered acceptable.
- D. Laboratory Blanks:
D.1 The target analyte was not detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.
- E. Field Blanks:
E.1 The target analyte was not detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.
- F. Laboratory Control Sample Analysis:
F.1 The laboratory control sample QC criteria were met for all blank spike analyses and the results are considered acceptable.
- G. Field Duplicate Analysis:
G.1 No field duplicate analysis is included in the project documentation.
- H. Surrogate Recoveries:
H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.
- I. Matrix Spike/Matrix Spike Duplicate Analyses:
I.1 The matrix spike (MS) and matrix spike duplicate (MSD) analyses associated with sample BTR-SD08-SD01 exceeded the QC criteria. This is probably attributable to the high concentration of native EPH detected in the sample. This is not expected to have an adverse effect on the detected amount of EPH in the samples.

I.2 All other QC criteria were met for MS and MSD analyses associated with all other samples.
- J. Quantitation and Identification:
J.1 The chromatographic pattern of sample BTR-LF03-SD07 is not consistent with the chromatographic pattern of middle distillate fuel (diesel fuel). It is the opinion of the reviewer that the peaks are due to higher molecular weight hydrocarbons. Therefore, the detected results for EPH in these samples are estimated (J) and are usable for limited purposes (see modified sample data sheets).

J.2 No other problems were observed with sample quantitation and identification.
- K. Conclusion:
K.1 Due to the inconsistency of the chromatographic pattern of sample BTR-LF03-SD07 with the diesel fuel standard, the detected result in this sample is considered as estimated and usable for limited purposes.

K.2 The data for all other samples are considered valid and usable for all purposes.

LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Keith Strout
ANALYSIS: Extractable Petroleum Hydrocarbons by USEPA Method 8100M
MATRIX: Water & Soil
DATE: January 19, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received four (4) water samples and four (4) soil samples for Extractable Petroleum Hydrocarbons (EPH) analysis by USEPA Method 8100M (modified) on August 19 and 20, 1993. The samples were analyzed for EPH on August 21 through 24, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SD08-SEB	93.4203-08	Water
BTR-BKGD-S02	93.4203-06	Soil
BTR-BKGD-SD01	93.4199-01	Soil
BTR-BKGD-SW01	93.4199-06	Water
BTR-SS13-S02	93.4216-10	Soil
BTR-SS13-SD01	93.4216-05	Soil
BTR-SS13-SEB2	93.4215-06	Water
BTR-SS13-WEB2	93.4215-07	Water

The following QC sample designations were included in project documentation: sample numbers BTR-SD08-SEB, BTR-SS13-SEB2, and BTR-SS13-WEB2 were designated as "equipment blanks."

The analytical results for project soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared according to the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8100M and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 All QC criteria for the initial calibration were met and the results are considered acceptable.

C. Continuing Calibrations:

C.1 All QC criteria for continuing calibration were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 The target analyte was not detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable

E. Field Blanks:

E.1 The target analyte was not detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.

F. Laboratory Control Sample Analysis:

F.1 The laboratory control sample QC criteria were met for all blank spike analyses and the results are considered acceptable.

G. Field Duplicate Analysis:

G.1 No field duplicate analysis is included in the project documentation.

H. Surrogate Recoveries:

H.1 The surrogate recoveries in the matrix spike (MS) and matrix spike duplicate (MSD) analyses associated with samples BTR-SS13-S02 and BTR-SS13-SD01 could not be determined because of the dilution required due to the high concentration of EPH in the sample. This is not expected to have an adverse effect on the detected amount of EPH in the samples.

H.2 All other surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The MS and MSD analyses associated with samples BTR-SS13-S02 and BTR-SS13-SD01 exceeded the QC criteria. This is probably due to the high concentration of native EPH detected in the sample. This is not expected to have an adverse effect on the detected amount of EPH in the samples.

I.2 All other QC criteria were met for matrix spike and matrix spike duplicate analyses associated with all other samples.

J. Quantitation and Identification:

J.1 The chromatographic pattern of samples BTR-BKGD-SD01, BTR-BKGD-S02, BTR-SS13-S02, and BTR-SS13-SD01 is not consistent with the chromatographic pattern of middle distillate fuel (diesel fuel). It is the opinion of the reviewer that the peaks are due to higher molecular weight hydrocarbons. Therefore, the detected results for EPH in these samples are estimated (J) and are usable for limited purposes (see modified sample data sheets).

J.2 No other problems were observed with sample quantitation and identification of the samples.

K. Conclusion:

K.1 Due to the inconsistency of the chromatographic pattern of samples BTR-BKGD-SD01, BTR-BKGD-S02, BTR-SS13-S02, and BTR-SS13-SD01 with the diesel fuel standard, the detected results in these samples are considered as estimated and usable for limited purposes.

K.2 The data for all other samples are considered valid and usable for all purposes.

LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Keith Strout
ANALYSIS: Halogenated Volatile Organic Compounds by USEPA Method 8010
MATRIX: Water & Soil
DATE: January 19, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received three (3) water samples and three (3) soil samples for Halogenated Volatile Organic Compound (HVOC) analysis by USEPA Method 8010 on August 19 and August 20, 1993. The samples were analyzed for HVOCs on August 20, 1993, through August 24, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-BKGD-SD01	93.4199-01	SOIL
BTR-BKGD-SW01	93.4199-06	WATER
BTR-SD08-TB02	93.4199-13	WATER
BTR-BKGD-S02	93.4203-06	SOIL
BTR-SD08-SEB	93.4203-08	WATER
BTR-SS13-S02	93.4216-10	SOIL

The following QC sample designation were included in project documentation: sample number BTR-SD08-SEB was designated as an "equipment blank" and sample number BTR-SD08-TB02 was designated as a "trip blank."

It should be noted, that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan for USEPA Method 8010. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results for project soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8010 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 The technical holding time QC criteria were met for all project samples.

B. Initial Calibration:

B.1 All QC criteria for the initial calibration were met and the results are considered acceptable.

C. Continuing Calibration:

C.1 All QC criteria for the continuing calibration were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Field Blanks:

E.1 Target analyte 1,2-dichloroethane was detected in soil equipment blank BTR-SD08-SEB at a concentration of 0.0025 mg/L. This compound was not detected in the laboratory blank or in the associated soil sample. Since the soil PQL is fifty times greater than the water PQL for this analyte, the PQL for the associated soil sample has not been qualified.

F. Field Duplicate Analysis:

F.1 No field duplicate analysis is included in the project documentation.

G. Surrogate Recoveries:

G.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

H. Matrix Spike/Matrix Spike Duplicate Analyses:

H.1 The matrix spike (MS) and matrix spike duplicate (MSD) analyses met all QC criteria and are considered acceptable.

I. Internal Standards:

I.1 Internal standard areas for all sample analysis were within specified QC criteria and the results are considered acceptable.

J. Quantitation & Identification:

J.1 No problems were observed with sample quantitation and identification in project sample analysis.

K. Conclusion:

K.1 All data are considered valid and usable for all purposes.

BTR-SD08-SEB	93.4175-03	WATER
BTR-LF01-SW03	93.4285-02	WATER

The following QC sample designations were included in project documentation: sample numbers BTR-SD08-AB and BTR-AB-02 were designated as "ambient blanks;" sample numbers BTR-SD08-TB01 and BTR-LF03-TB were designated as "trip blanks;" and BTR-EB-05, BTR-SS13-SEB2, BTR-SS13-WEB and BTR-SD08-SEB were designated as "equipment blanks."

It should be noted, that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan for USEPA Method 8260. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results for project soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed on Table 1B.

This report was prepared in accordance with the USEOA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8260 and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Sample BTR-LF01-S01 was collected on August 21, 1993 and analyzed on September 5, 1993. The technical holding time QC criteria of 14 days was exceeded by 1 day. Therefore the practical quantitation limits for this sample are qualified as estimated (J) and are considered usable for limited purposes.

A.2 The technical holding time QC criteria were met for all other project samples.

B. Instrument Tuning:

B.1 All QC criteria for the bromofluorobenzene (BFB) tunes were met and the results are considered acceptable.

C. Initial Calibration:

C.1 All QC criteria for the initial calibration were met and the results are considered acceptable.

D. Continuing Calibration:

D.1 All QC criteria for the continuing calibrations were met and the results are considered acceptable.

E. Laboratory Blanks:

E.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

F. Field Blanks:

F.1 Target compounds were detected in the equipment and ambient blanks as listed below (mg/L).

<u>Field Blank</u>	<u>Compound#1*</u>	<u>Compound#2</u>	<u>Compound#3</u>
BTR-SD08-AB	0.011	0.0019	0.0016
BTR-AB-02	0.0058	0.0022	0.0063
BTR-EB-05	0.0029	0.0023	0.0032
BTR-SS13-SEB2	0.0024		0.0022
BTR-SS13-WEB	0.0036	0.0033	
BTR-SD08-SEB			0.0044

- * Compound #1 = methylene chloride
Compound #2 = toluene
Compound #3 = 1,2-dichloroethane

Due to field blank contamination, the results reported for the following analytes are considered nondetected (U) (see sample data sheets):

- Chloromethane in sample number BTR-AOC10-SW01
- 1,2-Dichloroethane in sample number BTR-AOC10-SW01

G. Laboratory Control Sample Analyses:

G.1 Laboratory control sample QC criteria were met for all "blank spike" analyses and the results are considered acceptable.

H. Field Duplicate Analysis:

H.1 No field duplicate analyses were included with the project documentation.

I. Surrogate Recoveries:

I.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

J. Matrix Spike/Matrix Spike Duplicate Analyses:

J.1 The recovery of 1,1-dichloroethene in the matrix spike (MS) and matrix spike duplicate (MSD) analyses associated with samples BTR-BKGD-S02, BTR-AOC10-SW01, BTR-LF01-S01, BTR-AB-02, BTR-EB-05 and BTR-LF03-SD07 exceeded the applicable QC criteria.

According to USEPA validation guidelines, organic data are not qualified based on low MS recoveries alone. It is the opinion of the reviewer that the quality of the data is not affected.

J.2 The MS and MSD analyses associated with all other samples met all applicable QC criteria and are considered acceptable.

K. System Performance:

K.1 Samples BTR-SD08-SEB, BTR-SS13-SEB2 and BTR-LF03-SD07 were analyzed more than 12 hours after the instrument tune as verified by data submitted with the samples. Therefore, the detected and nondetected results for samples BTR-LF03-TB, BTR-SS13-WEB and BTR-LF01-SW03 are considered estimated (J) (see modified sample data sheets). It is not known what effect this method noncompliance will have on the quality of the data.

K.2 No other problems with system performance were observed for project sample analyses.

L. Quantitation & Identification:

L.1 Sample BTR-LF03-SD07 required dilution in order to quantitate target compound tetrachloroethene within the linear range of the system.

L.2 No problems were observed with sample quantitation and identification.

M. Conclusion:

M.1 Due to 12 hour sample analysis time criteria and technical holding time QC criteria being exceeded, select data are considered as estimated and usable for limited purposes.

M.2 Due to field blank contamination, select data are considered as nondetected and estimated and usable for limited purposes.

M.3 All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No.41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Cynthia Schlag, ICF Kaiser Engineers
ANALYSIS: Volatile Organic Compounds by USEPA Method 8260
MATRIX: Water and Soil
DATE: January 20, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (Anchorage, AK) received thirteen (13) soils and ten (10) water samples for volatile organic compounds (VOC) analyses by USEPA Method 8260 on August 16, 17, 18, 20, 21, and September 2 and 3, 1993. The samples were analyzed for VOCs by gas chromatography/mass spectrometry (GC/MS) on August 20, 21, 28 and September 1, 2, 6, 7, 9, 15, 23, 28, 29, 1993.

The ICF site identification numbers and corresponding Commercial Testing & Engineering Co. sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SS14-SW01	93.4301-01	Soil
BTR-SS14-SD01	93.4301-04	Soil
BTR-SS14-S04	93.4301-07	Soil
BTR-AOC10-S04	93.4301-08	Soil
BTR-AOC14-SD01	93.4305-01	Soil
BTR-AOC14-S02	93.4305-06	Soil
BTR-AOC14-SW01	93.4305-07	Water
BTR-SD08-WEB	93.4179-01	Water
BTR-BKGD-SW01	93.4179-02	Water
BTR-BKGD-SD01	93.4179-04	Soil
BTR-SD08-TB	93.4179-05	Water
BTR-SD08-SD01	93.4178-03	Soil
BTR-SS13-S02	93.4212-05	Soil
BTR-AOC9-2S11-1.5	93.4616-06	Soil
BTR-EB-07	93.4616-09	Water
BTR-SS13-2S05	93.4616-10	Soil
BTR-EB-08	93.4616-13	Water
BTR-LF04-2SW03	93.4616-14	Water
BTR-LF04-2SD04	93.4616-16	Soil

Soil
Water
Water
Water

The following QC sample designations were included in project documentation: sample numbers BTR-SD08-TB and BTR-TB-04 were designated as "trip blanks;" and sample numbers BTR-EB-04, BTR-EB-07, BTR-EB-08, and BTR-SD08-WEB were designated as "equipment blanks."

Soil sample results and quantitation limits were reported by the laboratory with an adjustment for moisture content.

Laboratory sample numbers were referenced to identify some matrix spike (MS) and matrix spike duplicate (MSD) samples in comment K.1, because the laboratory reports for these samples were not provided. The corresponding ICF sample numbers could not be determined for reference.

It should be noted, that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan for USEPA Method 8260. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA SW-846 Method 8260, and the Project Sampling and Analysis Plan.

II. VALIDITY and COMMENTS:

A. Technical Holding Times:

A.1 Sample numbers BTR-TB-05 and BTR-SS14-SW01 exceeded technical holding time criteria of 14 days. Therefore, the laboratory did not analyze the samples.

A.2 Technical holding time QC criteria were met for all other project sample analyses.

B. GC/MS Instrument Performance Check:

B.1 All QC criteria for the bromofluorobenzene (BFB) tunes were met and the results are considered acceptable.

C. Initial Calibration:

C.1 All QC criteria for the initial calibration were met and the results are considered acceptable.

- D. Continuing Calibration:
D.1 All QC criteria for the continuing calibration were met and the results are considered acceptable.
- E. Laboratory Blanks:
E.1 No target analytes were detected in the method blank at concentrations above the Practical Quantitation Limits (PQL) and the results are considered acceptable.
- F. Surrogate Recoveries:
F.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.
- G. Field Blanks:
G.1 The following target analytes were detected in the equipment blanks listed below at concentrations above the PQL:

<u>Sample No.</u>	<u>Analyte</u>	<u>Concentration</u>
BTR-EB-04	Methylene chloride	0.0060 mg/L
BTR-EB-04	Toluene	0.0023 mg/L
BTR-EB-04	1,2-Dichloroethane	0.0015 mg/L
BTR-EB-07	Methylene chloride	0.0083 mg/L
BTR-EB-07	Toluene	0.0017 mg/L
BTR-EB-08	Methylene chloride	0.0066 mg/L
BTR-EB-08	Toluene	0.0013 mg/L
BTR-SD08-WEB	Methylene chloride	0.0013 mg/L
BTR-SD08-WEB	1,2-Dichloroethane	0.0030 mg/L

Due to equipment blank contamination, the results reported for the following analytes are considered nondetected (U) (see sample data sheets):

- Toluene in sample number BTR-AOC9-2S11-1.5
- 1,2-Dichloroethane in sample numbers BTR-AOC09-SW01 and BTR-BKGD-SW01

G.2 No other target analytes were detected in the field blanks at concentrations above the PQL and the results are considered acceptable.

- H. Laboratory Control Sample Analysis:
H.1 Laboratory control sample QC criteria were met for all "blank spike" analyses and the results are considered acceptable.
- I. Laboratory Replicate Analysis:
I.1 No laboratory replicate analysis was included with the project documentation.
- J. Field Duplicate Analysis:
J.1 No field duplicate analyses were included with the project documentation.

K. Matrix Spike/Matrix Spike Duplicate Analysis:

K.1 The recoveries of 1,1-Dichloroethane in the matrix spike (MS) and matrix spike duplicate (MSD) analyses associated with all the soil samples did not meet the laboratory established QC limits as noted below.

<u>Sample No.</u>	<u>% Recovery</u>	<u>QC Limits</u>
BTR-AOC10-S04 MS	16	80-120%
BTR-AOC10-S04 MSD	16	80-120%
BTR-AOC14-SD01 MS	64	80-120%
BTR-AOC14-SD01 MSD	66	80-120%
93.4173-07	20	80-120%
93.4173-11	18	80-120%
93.4173-07	20	80-120%
93.4173-08	18	80-120%
93.4209-02	16	80-120%
93.4209-03	19	80-120%
93.4514-03	64	80-120%
93.4514-04	68	80-120%
93.4483-11	57	80-120%
93.4483-12	58	80-120%

According to USEPA data validation guidelines, organic data are not qualified based on MS/MSD QC outliers alone. It is the opinion of the reviewer that the low recoveries in these samples are due to sample matrix interferences, and the affect on the quality of the data is not known.

L. Internal Standards:

L.1 Internal standard areas for all sample analyses were within specified QC criteria and the results are considered acceptable.

M. Quantitation and Identification:

M.1 No problems were observed with analyte quantitation and identification in project sample analyses.

N. Conclusion:

N.1 Due to equipment blank contamination, select data are considered nondetected. All other data are considered valid and usable for all purposes.

ICF KAISER ENGINEERS

ICF KAISER ENGINEERS, INC.
1800 HARRISON STREET

DATA VALIDATION REPORT

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Cynthia Schlag, ICF Kaiser Engineers
ANALYSIS: Volatile Organic Compounds by USEPA Method 8260
MATRIX: Water and Soil
DATE: January 26, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (Anchorage, AK) received one (1) soil and one (1) water sample for volatile organic compound (VOC) analyses by USEPA Method 8260 on August 20, 1993. The samples were analyzed for VOCs by gas chromatography/mass spectrometry (GC/MS) on August 30 and September 6, 1993.

The ICF site identification numbers and corresponding Commercial Testing & Engineering Co. sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-LF04-SW01	93.4286-01	Water
BTR-LF04-SD01	93.4286-03	Soil

There were no QC sample designations included in project documentation.

Soil sample results and quantitation limits were reported by the laboratory with an adjustment for moisture content.

It should be noted that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan for USEPA Method 8260. According to the laboratory, all soil samples were extracted in methanol before analysis as required by State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B. This report was prepared according to the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA SW-846 Method 8260, and the Project Sampling and Analysis Plan.

II. VALIDITY and COMMENTS:

- A. Technical Holding Times:
 - A.1 Technical holding time QC criteria were met for all project sample analyses.
- B. GC/MS Instrument Performance Check:
 - B.1 All QC criteria for the bromofluorobenzene (BFB) tunes were met and the results are considered acceptable.
- C. Initial Calibration:
 - C.1 All QC criteria for the initial calibration were met and the results are considered acceptable.
- D. Continuing Calibration:
 - D.1 All QC criteria for the continuing calibration were met and the results are considered acceptable.
- E. Laboratory Blanks:
 - E.1 No target analytes were detected in the method blank at concentrations above the Practical Quantitation Limits (PQL) and the results are considered acceptable.
- F. Surrogate Recoveries:
 - F.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.
- G. Field Blanks:
 - G.1 No target analytes were detected in the field blanks at concentrations above the PQL and the results are considered acceptable.
- H. Laboratory Control Sample Analysis:
 - H.1 Laboratory control sample QC criteria were met for all "blank spike" analyses and the results are considered acceptable.
- I. Laboratory Replicate Analysis:
 - I.1 No laboratory replicate analysis was included with the project documentation.
- J. Field Duplicate Analysis:
 - J.1 No field duplicate analyses were included with the project documentation.

K. Matrix Spike/Matrix Spike Duplicate Analysis:

K.1 The recoveries of 1,1-Dichloroethene and Trichloroethene in the matrix spike (MS) and matrix spike duplicate (MSD) analyses associated with the soil sample did not meet the laboratory established QC limits as noted below.

<u>Compound</u>	<u>% Recovery</u>	<u>QC Limits</u>
1,1-Dichloroethene	18	80-120%
1,1-Dichloroethene	16	80-120%
Trichloroethene	78	80-120%
Trichloroethene	78	80-120%

According to USEPA data validation guidelines, organic data are not qualified based on MS/MSD QC outliers alone. Based on the acceptable recoveries of the laboratory control sample analysis, it is the opinion of the reviewer that the low recoveries in these samples are due to sample matrix interferences, and the affect on the quality of the data cannot be determined.

L. Internal Standards:

L.1 Internal standard areas for all sample analyses were within specified QC criteria and the results are considered acceptable.

M. Quantitation and Identification:

M.1 No problems were observed with analyte quantitation and identification in project sample analyses.

N. Conclusion:

N.1 All data are considered valid and usable for all purposes.

DATA VALIDATION REPORT (Revised)

PROGRAM: Elmendorf AFB/Barter Island RI/FS (ICF Project No.41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Timothy Vonnahme
ANALYSIS: Total Metals & Dissolved Metals by USEPA Method 6010 and
USEPA Method 7841 (Thallium)
MATRIX: Water
DATE: November 19, 1993 (Revision February 2, 1994)

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received three (3) water samples for total metals and dissolved metals analyses by USEPA Method 6010 and USEPA Method 7814 on August 20 through 24, 1993. The samples were digested on August 25 and 28, 1993, and analyzed for total and dissolved metals by inductively coupled plasma atomic emission spectrometry (ICP) and for thallium by atomic absorption furnace technique (GFAA) on August 26 and 30, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab. Sample No.</u>	<u>Matrix</u>
BTR-AOC10-SW01	93.4303-06	Water
BTR-LF01-SW03	93.4285-02	Water
BTR-SS13-WEB2	93.4211-01	Water
BTR-AOC10-SW01 (F)	93.4303-06	Water
BTR-LF01-SW03 (F)	93.4285-02	Water
BTR-SS13-WEB2 (F)	93.4211-01	Water

Sample numbers BTR-AOC10-SW01(F), BTR-LF01-SW03(F) and BTR-SS13-WEB2(F) were field-filtered samples and analyzed for dissolved metals on August 26 and 30, 1993.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B.

This report was prepared in accordance with the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses," October 1989, and USEPA SW-846 Method 6010 and Method 7841, and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 Initial calibration QC criteria were met for all project sample analyses.

C. Continuing Calibration:

C.1 Continuing calibration QC criteria were met for all project sample analyses.

D. Laboratory Blanks:

D.1 The target analytes were not detected in the calibration blanks at a concentration above the Practical Quantitation Limit (PQL) and the results are considered acceptable.

D.2 Calcium in the method blank associated with sample number BTR-LF01-SW03 was detected at a concentration of 0.378 mg/L, exceeding the QC criteria of 0.200 mg/L. However, since the associated sample number BTR-LF01-SW03 contained calcium at a concentration of 130 mg/L (greater than 10X the PQL), no data are qualified.

D.3 No other target analytes were detected in the above method blank.

D.4 No target analytes were detected at concentrations above the PQLs in the method blanks associated with sample numbers BTR-AOC10-SW01 and BTR-SS13-WEB2 and the results are considered acceptable.

E. Field Blanks:

E.1 Target analytes were not detected in the equipment blank at a concentration above the PQL and the results are considered acceptable.

F. Field Duplicate Analysis:

F.1 There were no field duplicate analyses included in the project documentation associated with project sample analyses.

G. Laboratory Replicate Analysis:

G.1 The sample duplicate analyses associated with these samples met all QC criteria for precision as measured by Relative Percent Difference (RPD) and the results are considered acceptable.

H. ICS Interference Check Sample (ICS) Analysis:

H.1 The ICS analyses met all applicable QC criteria.

I. Laboratory Control Sample Analysis:

I.1 A percent recovery of 116% was obtained for calcium in the laboratory control sample analysis associated with sample number BTR-AOC10-SW01. The percent recovery marginally exceeded the QC criteria of 90-110% for accuracy, therefore the result reported for calcium in the above noted sample is considered acceptable.

I.2 Percent recoveries of 117% and 89% were obtained for calcium and potassium, respectively, in the laboratory control sample analyses associated with sample number BTR-LF01-SW03. The above noted percent recoveries were marginally outside the QC criteria of 90-110% for accuracy, therefore the result reported for calcium in the above noted sample is considered acceptable.

I.3 All other analytes in the above laboratory control sample analyses, and all other laboratory control sample analyses associated with project samples met all applicable QC criteria and the results are considered acceptable.

J. Matrix Spike Analysis:

J.1 The matrix spike (MS) recoveries for the indicated target analytes were outside the established QC limits of 75-125% for the project MS analyses as follows:

<u>Sample</u>	<u>Analyte</u>	<u>Recovery</u>
BTR-AOC10-SW01	Sodium	-110%
BTR-AOC10-SW01 (F)	Sodium	-165%
BTR-AOC10-SW01	Magnesium	70%
BTR-AOC10-SW01 (F)	Magnesium	68%
BTR-LF01-SW03 (F)	Calcium	58%
BTR-LF01-SW03 (F)	Sodium	3%
BTR-SS13-WEB2	Thallium	58%
BTR-SS13-WEB2 (F)	Thallium	59%
BTR-SS13-WEB2	Sodium	1466%

The sample concentration exceeds the spike concentration by a factor of four or more for the above noted target analytes. Therefore, data are not qualified on the basis of the deviations in MS recoveries. Post-digestion spike recovery analyses were performed on August 26 and 30, 1993 and the percent recoveries for all post-digestion spike analyses met applicable QC criteria.

J.2 All remaining analytes in the above noted matrix spike analyses, and all other matrix spike analyses associated with project samples met applicable QC criteria and the results are considered acceptable.

K. Quantitation:

K.1 No problems were encountered with sample quantitation in project sample analyses.

L. Conclusion:

L.1 All data are considered valid and usable for all purposes.

DATA VALIDATION REPORT (Revised)

PROGRAM: DEW-Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Traci Grizzle, ICF Kaiser Engineers
ANALYSIS: Total Metals by USEPA Method 6010
MATRIX: Soil
DATE: January 4, 1994 (Revision February 2, 1994)

I. INTRODUCTION:

Commercial Testing & Engineering Co. (Anchorage, AK) received two (2) soil samples for total metals analyses by USEPA Method 6010 on August 19, 1993. The samples were digested on August 27, 1993 and analyzed for metals by inductively coupled plasma atomic emission spectroscopy (ICP) on August 29, 1993.

The ICF site identification numbers and corresponding Commercial Testing & Engineering Co. laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-AOC14-S02	4305-6
BTR-AOC14-SD01	4305-1

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses," October 1989 and SW-846 USEPA Method 6010.

II. VALIDITY and COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

- B. Initial Calibration:
 B.1 The recovery for silver was marginally below the QC criteria. This slight discrepancy is not expected to affect data quality.
 B.2 All other initial calibration QC criteria were met for all project sample analyses.
- C. Continuing Calibrations:
 C.1 Continuing calibration QC criteria were met for all project sample analyses.
- D. Blank Analyses:
 D.1 No target analytes were detected in the method and calibration blanks (initial and continuing calibration blanks) above the practical quantitation limit (PQL) and the results are considered acceptable.
- E. ICP Interference Check Sample (ICS) Analyses:
 E.1 The ICS analyses met all applicable QC criteria.
- F. Laboratory Control Sample Analyses:
 F.1 All laboratory control sample QC criteria were met.
- G. Laboratory Replicate Analysis:
 G.1 A QC limit for precision of $\leq 35\%$, as measured by the Relative Percent Difference (RPD) between sample results, was specified for laboratory replicate comparability.

Sample number BTR-AOC14-SD01 was utilized for the laboratory replicate analysis. The RPD between sample results for the indicated target analytes marginally exceeded the established QC limits as follows:

<u>Analyte</u>	<u>RPD</u>	<u>QC limits</u>
Lead	36%	$\leq 35\%$
Chromium	40%	$\leq 35\%$
Copper	40%	$\leq 35\%$

No adverse effects are expected on data quality due to the above noted deviations.

- H. Field Duplicate Analysis:
 H.1 There were no field duplicate analyses included in the project documentation.
- I. Matrix Spike Analyses:
 I.1 Sample number BTR-AOC14-SD01 was utilized for the matrix spike (MS) analysis. The spike recovery for magnesium was 209%, exceeding the advisory QC criteria of 75-125%. Due to the above noted deficiency in MS analysis, the detected results for

magnesium in the associated samples are considered as estimates (J) and usable for limited purposes only (see modified sample data sheets). A post-digestion spike recovery analysis was performed on August 29, 1993 and the magnesium recovery result for the re-analysis was within the advisory QC limits.

The MS recoveries for aluminum, calcium, and iron exceeded the upper QC limit of 125%. However, the sample concentration exceeds the spike concentration by a factor of four or more for the above noted target analytes. Therefore, data are not qualified on the basis of these high MS recoveries.

I.2 All other QC criteria were met for the MS analysis.

J. Quantitation and Identification:

J.1 No problems were observed with analyte quantitation and identification in project sample analyses.

K. Conclusion:

K.1 Due to the above noted performance deficiency in matrix spike analyses, select data are considered estimates and usable for limited purposes. All other data are considered valid and usable for all purposes.

DATA VALIDATION REPORT

PROGRAM: DEW-Line RI/FS (ICF Project No. 41096-412-02)
LABORATORY: Commercial Testing & Engineering Co. (Anchorage, AK)
REVIEWER: Traci Grizzle, ICF Kaiser Engineers
ANALYSIS: Total Thallium by USEPA Method 7841
MATRIX: Soil
DATE: December 29, 1993

I. INTRODUCTION:

Commercial Testing & Engineering Co. (Anchorage, AK) received two (2) soil samples for total thallium analysis by USEPA Method 7841 on August 24, 1993. The samples were digested on August 27, 1993 and analyzed for thallium by atomic absorption, furnace technique on August 28, 1993.

The ICF site identification numbers and corresponding Commercial Testing & Engineering Co. laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-AOC14-SD01	4305-1
BTR-AOC14-SO2	4305-6

The analytical results with qualifications are presented on modified sample data sheets included in the report appendix. Definitions of data qualifiers are provided in Table 1B.

This report was prepared according to the USEPA draft document "Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses," October 1989 and SW-846 USEPA Method 7841.

II. VALIDITY and COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

- B. Initial Calibration:
B.1 Initial calibration QC criteria were met for all project sample analyses.
- C. Continuing Calibrations:
C.1 Continuing calibration QC criteria were met for all project sample analyses.
- D. Laboratory Blanks:
D.1 The target analyte was not detected in the method blanks at a concentration above the Practical Quantitation Limit (PQL) and the results are considered acceptable.
- E. Field Blanks:
E.1 There were no field blank analyses included in the project documentation.
- F. Laboratory Control Sample Analysis:
F.1 All laboratory control sample QC criteria were met.
- G. Laboratory Replicate Analysis:
G.1 Sample number BTR-AOC14-SD01 was utilized for the laboratory replicate analysis. The results of the laboratory replicate analysis met all applicable QC criteria and the results are considered acceptable.
- H. Field Duplicate Analysis:
H.1 There was no field duplicate analysis included in the project documentation.
- I. Matrix Spike Analysis:
I.1 Sample number BTR-AOC14-SD01 was utilized for the matrix spike (MS) analysis. The MS recovery met all applicable QC criteria and the results are considered acceptable.
- J. Quantitation:
J.1 No problems were observed with analyte quantitation in project sample analyses.
- K. Conclusion:
K.1 All data are considered valid and usable for all purposes.

ANALYSIS: Volatile Petroleum Hydrocarbons by USEPA Method 8015M
MATRIX: Water & Soil
DATE: January 21, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received four (4) water samples and four (4) soil samples for Volatile Petroleum Hydrocarbons (VPH) analysis by USEPA Method 8015M (modified) on August 19 and 20, 1993. The samples were analyzed for VPH on August 20 through 27, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-SD08-SEB	93.4203-08	Water
BTR-BKGD-S02	93.4203-06	Soil
BTR-BKGD-SD01	93.4199-01	Soil
BTR-BKGD-SW01	93.4199-06	Water
BTR-SS13-S02	93.4216-10	Soil
BTR-SS13-SD01	93.4216-05	Soil
BTR-SS13-SEB2	93.4215-06	Water
BTR-SS13-WEB2	93.4215-07	Water

The following QC sample designations were included in project documentation: sample numbers BTR-SD08-SEB, BTR-SS13-SEB2, and BTR-SS13-WEB2 were designated as "equipment blanks."

It should be noted, that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan for USEPA Method 8015M. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results for project soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets (IRPIMS) submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared according to the USEPA draft document "National Functional Guidelines for Organic Data Review" (December 1990), USEPA Method 8015M and the Project Sampling and Analysis Plan.

II. VALIDITY & COMMENTS:

A. Technical Holding Times:

A.1 Technical holding time QC criteria were met for all project sample analyses.

B. Initial Calibration:

B.1 All QC criteria for the initial calibration were met and the results are considered acceptable.

C. Continuing Calibrations:

C.1 All QC criteria for the continuing calibration were met and the results are considered acceptable.

D. Laboratory Blanks:

D.1 The target analyte was not detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. Field Blanks:

E.1 The target analyte was not detected in the equipment blanks at a concentration above the PQL and the results are considered acceptable.

F. Laboratory Control Sample Analysis:

F.1 The laboratory control sample QC criteria were met for all "blank spike" analyses and the results are considered acceptable.

G. Field Duplicate Analysis:

G.1 No field duplicate analysis is included in the project documentation.

H. Surrogate Recoveries:

H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. Matrix Spike/Matrix Spike Duplicate Analyses:

I.1 The matrix spike (MS) and matrix spike duplicate (MSD) analyses associated with these samples met all applicable QC criteria and the results are considered acceptable.

J. Internal Standards:

J.1 Internal standard areas for all sample analyses were within specified QC criteria and the results are considered acceptable.

K. Quantitation and Identification:

K.1 No other problems were observed with sample quantitation and identification in project sample analysis.

L. Conclusion:

L.1 All data are considered valid and usable for all purposes.

ANALYSIS: Volatile Petroleum Hydrocarbons by USEPA Method 8015M
MATRIX: Soil
DATE: January 21, 1994

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received two (2) soil samples for Volatile Petroleum Hydrocarbons (VPH) analysis by USEPA Method 8015M (modified) on August 16 and 18, 1993. The samples were analyzed for VPH by gas chromatography with flame ionization detection on August 21, 24, and 25, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>
BTR-SD08-SD01	93.4198-08
BTR-LF03-SD07	93.4219-10

There were no QC sample designations included in project documentation.

It should be noted, that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan for USEPA Method 8015M. According to the laboratory, all soil samples were extracted in methanol before analysis as required by State of Alaska guidelines. ANALYSIS: BTEX Compounds by USEPA Method 8020
MATRIX: Water & Soil
DATE: January 19, 1994 (revised March 4, 1994)

I. INTRODUCTION:

Commercial Testing & Engineering Co. (CT&E) (Anchorage, AK) received five (5) water samples and four (4) soil samples for BTEX (benzene, toluene, ethylbenzene, and xylenes) analysis by USEPA Method 8020 on August 19 and August 20, 1993. The samples were analyzed for BTEX on August 20, 1993, through August 24, 1993.

The ICF site identification numbers and corresponding CT&E laboratory sample identification numbers are listed below.

<u>ICF Site No.</u>	<u>Lab Sample No.</u>	<u>Matrix</u>
BTR-BKGD-SD01	93.4199-01	SOIL
BTR-BKGD-SW01	93.4199-06	WATER
BTR-SD08-TB02	93.4199-13	WATER
BTR-SS13-S02	93.4216-10	SOIL
BTR-SS13-SD01	93.4216-05	SOIL
BTR-SD08-SEB	93.4203-08	WATER
BTR-BKGD-S02	93.4203-06	SOIL
BTR-SS13-SEB2	93.4215-06	WATER
BTR-SS13-WEB2	93.4215-07	WATER

The following QC sample designations were included in project documentation: sample numbers BTR-SD08-SEB, BTR-SS13-SEB2, and BTR-SS13-WEB2 are designated as "equipment blanks"; and BTR-SD08-TB02 is designated as a "trip blank."

It should be noted, that all quantitation limits reported by the laboratory for project soil samples were higher than those specified in the Project Sampling and Analysis Plan for USEPA Method 8020. According to the laboratory, all soil samples were extracted in methanol before analysis, as required by State of Alaska guidelines. It is the opinion of the reviewer that the quality of the data was not affected.

The analytical results for project soil samples were reported with an adjustment for moisture content.

The analytical results with qualifications are presented on modified sample data sheets submitted by the laboratory. Definitions of the data qualifiers are listed in Table 1B. This report was prepared in accordance with the USEPA draft document "National Functional Guidelines for Organic Data Review", December, 1990 and USEPA Method 8020 and the Project Sampling and Analysis Plan.

II. **VALIDITY & COMMENTS:**

A. **Technical Holding Times:**

A.1 The technical holding time QC criteria were met for all project samples.

B. **Initial Calibration:**

B.1 All QC criteria for the initial calibration were met and the results are considered acceptable.

C. **Continuing Calibration:**

C.1 All QC criteria for the continuing calibration were met and the results are considered acceptable.

D. **Laboratory Blanks:**

D.1 No target analytes were detected in the method blanks at a concentration above the practical quantitation limit (PQL) and the results are considered acceptable.

E. **Field Blanks:**

E.1 Target analyte toluene was detected in soil equipment blank BTR-SS13-SEB2 at a concentration of 0.0032 mg/L. This compound was not detected in the laboratory blank or in the associated soil sample, therefore no data are qualified due to field blank contamination.

F. **Field Duplicate Analysis:**

F.1 No field duplicate analysis is included in the project documentation.

G. **Laboratory Control Sample Analysis:**

G.1 The laboratory control sample QC criteria were met for all "blank spike" analyses and the results are considered acceptable.

H. **Surrogate Recoveries:**

H.1 All surrogate recoveries met applicable QC criteria and the results are considered acceptable.

I. **Matrix Spike/Matrix Spike Duplicate Analyses:**

I.1 The matrix spike (MS) and matrix spike duplicate (MSD) analyses met all QC criteria and are considered acceptable.

J. **Internal Standards:**

J.1 Internal standard areas for all sample analyses were within specified QC criteria and the results are considered acceptable.

K. Quantitation & Identification:

K.1 Due to analyte identification problems, the following analytes are considered to be presumptively present (N) and the detected results are usable for limited purposes only (see modified sample data sheets):

- toluene in sample numbers BTR-SS13-S02 and BTR-SS13-SEB2
- ethylbenzene in sample numbers BTR-SS13-SD01 and BTR-SS13-S02
- p&m-xylene in sample numbers BTR-SS13-SD01 and BTR-SS13-S02
- o-xylene in sample numbers BTR-SS13-SD-1 and BTR-SS13-S02

The laboratory did not confirm all detected results by using a secondary column or GC/MS analysis. The results for the samples listed above are considered to be tentatively identified and qualitatively questionable.

K.2 No other problems were observed with sample quantitation and identification in project sample analysis.

L. Conclusion:

L.1 Due to the lack of confirmation, select data are considered to be tentatively identified and qualitatively questionable.

L.2 All other data are considered valid and usable for all purposes.
